

ENDANGERED SPECIES IN UKRAINE

The wildlife of Ukraine is distinguished a large variety of species with almost 45 thousand kinds of animals.

Species of fauna:

- ichthyofauna (fish)
- herpetofauna (frog, newt)
- avifauna (birds)
- mammal fauna (mammals)

Red book is devoted
Ukrainian flora and fauna.

Among the endangered animals can not to offer more or less important. However, there are animals whose extinction is particularly high risk. These animals are bison.

Hunting

Bison were brought to the threat of extinction. Bison included in the Red Book of Ukraine. This species is protected by Ukrainian reserves.

Steppe eagle rare bird and disappearing species.

Eagle can be seen in southern Ukraine. It eats rodents or small birds. At the end of last century was the main bird of many steps, but the almost completely disappeared from the territory of Ukraine through intensive plowing of the steppes, hunting, deforestation and destroying nests by people.

This species included as
endangered and protected reserve
Askania-Nova.

To protect and preserve endangered species, people create organizations that make a donation. September 18, 2008 in Kiev the Ukrainian protest under the slogan "STOR ZOOTSYDU IN UKRAINE"
