

# Secondary education in Russia

## ★ Basic facts

For five years, from the 5th to the 9th grade, the students are enrolled in primary school. The main high school course gives basic knowledge of the main areas of science. In primary school teaching is the standard object-cabinet system: each course is a teacher - a specialist in the discipline are sure that the proper office, and the class during the school day goes from room to room. In addition, the class is assigned the class teacher - one of the teachers at the school (not necessarily leading to this class any lessons, and some schools - freed from academic work at all), which is officially in charge of the class, resolves administrative and organizational issues with teaching the class as a whole and its students.

# ★ Subjects covered

The total number of investigated subjects in primary school - about two dozen. Among them are: algebra, geometry, physics, inorganic and general chemistry, fundamentals of organic chemistry, biology, Russian language, literature, history, social studies, geography, foreign languages, information and communication technology, music, fine arts, career education, physical education. The study load is on average six lessons a day

# ★ Graduation

At the end of primary school students take the state (final ) certification ( GIA ) : mathematics, Russian language and two optional ( under the " surrender " is understood as the result of receiving a mark at least " satisfactory" ) . According to the results of training the document - Certificate of basic general education - learning and confirming containing estimates for all study disciplines . Upon completion of the primary school of the students stay in school and goes to high school , some went to study at vocational schools.
