考題

No.1

Your company has multiple servers in a distributed environment. You work with two SQL Server 2005 computers named SQL1 and SQL2. Each server uses SQL Server Authentication and they use different logins. You need to write a distributed query that joins the data on SQL1 with the data on SQL2. What should you do?

- A. Ensure that both SQL1 and SQL2 use the same login name as the security context for each server.
- B. Configure SQL2 as a remote server. Write the query on SQL1.
- C. Configure SQL2 as a linked server to impersonate the remote login.
- D. Configure SQL2 as a distributed server. Use pass-through authentication.
