

Microsoft® Official Course

Module 1

Deploying and Managing Windows Server 2012

Module Overview

- Windows Server 2012 Overview
 - Overview of Windows Server 2012 Management
 - Installing Windows Server 2012
 - Post-Installation Configuration of Windows Server 2012
 - Introduction to Windows PowerShell

Lesson 1: Windows Server 2012 Overview

- On-Premises Servers

What Is Cloud Computing?

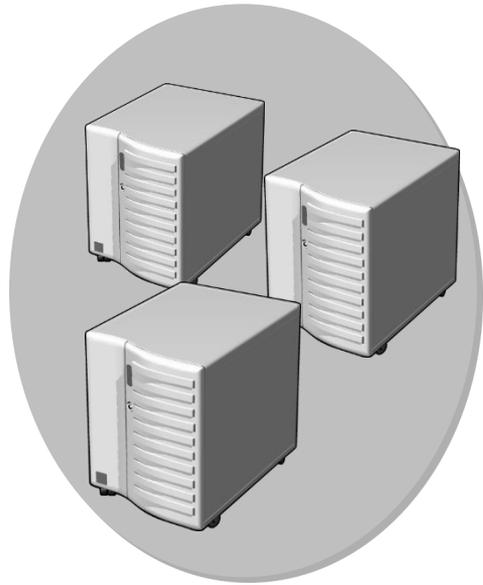

Windows Server 2012 Editions

What Is Server Core?

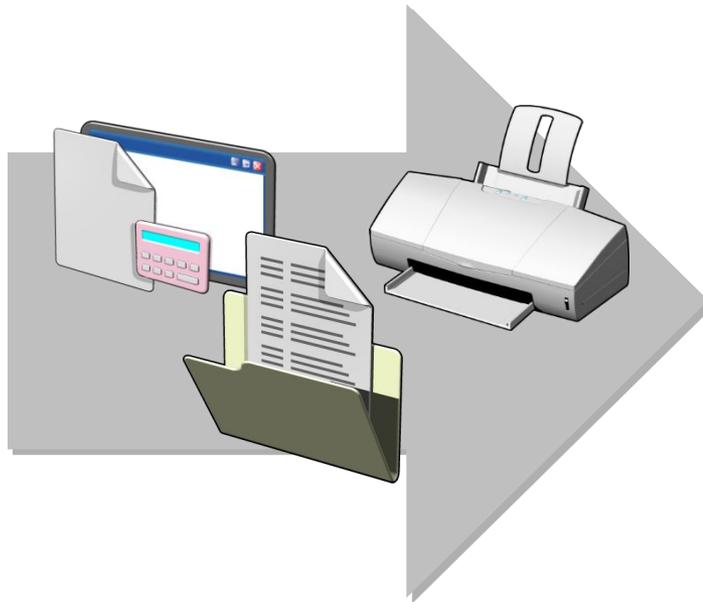

Windows Server 2012 Roles

What Are the Windows Server 2012 Features?

On-Premises Servers

Servers

**Resources provided
to clients**

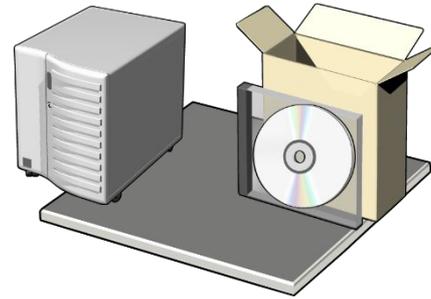

Clients

What Is Cloud Computing?

Types of cloud services:

- IaaS
- PaaS
- SaaS

Public clouds have multiple tenants

Private clouds have a single tenant, which:

- Is usually on-premises
- Is highly automated
- Uses System Center 2012 to provide automation and self-service
- Requires minimal direct configuration once set up

Windows Server 2012 Editions

Windows Server 2012 editions:

- Windows Server 2012 Standard operating system
- Windows Server 2012 Datacenter operating system
- Windows Server 2012 Foundation operating system
- Windows Server 2012 Essentials operating system
- Microsoft Hyper-V Server 2012
- Windows Storage Server 2012 Workgroup operating system
- Windows Storage Server 2012 Standard operating system
- Windows MultiPoint Server 2012 Standard operating system
- Windows MultiPoint Server 2012 Premium operating system

What Is Server Core?

Server Core

- Is a more secure, less resource-intensive installation option
- Can be converted to the full version of Windows Server 2012
- Is the default installation option for Windows Server 2012
- Is managed locally using `sconfig.cmd`
- If you enable remote management, you will rarely need to log on locally

Windows Server 2012 Roles

Functions

- Web Server
- Domain Controller
- Certificate Server

Roles

- Are made up of role services components that provide additional functionality associated with the role
- In Server Manager 2012, console servers with a similar role are grouped together
- Role deployment also includes the configuration of dependencies

What Are the Windows Server 2012 Features?

Features:

- Are components that support the server such as Windows Server Backup or Failover clustering
- Usually do not provide a service directly to clients on the network

Keep in mind the following points:

- Roles can have features as dependencies
- Features on Demand are features that need to be installed using a mounted image as a source

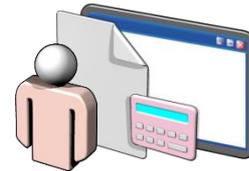

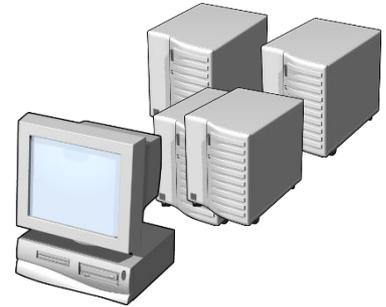

Lesson 2: Overview of Windows Server 2012 Management

- What Is Server Manager?
 - Administrative Tools and Remote Server Administration Tools
 - Demonstration: Using Server Manager
 - Configuring Services
 - Configuring Windows Remote Management

What Is Server Manager?

You can use **Server Manager** to:

- Manage multiple servers on a network from one console
- Add roles and features
- Launch Windows PowerShell sessions
- View events
- Perform server configuration tasks

Administrative Tools and Remote Server Administration Tools

Administrative tools:

- Active Directory Administrative Center
- Active Directory Users and Computers
- DNS console
- Event Viewer
- Group Policy Management Console
- IIS Manager
- Performance Monitor
- Resource Monitor
- Task Scheduler

Demonstration: Using Server Manager

In this demonstration, you will see how to:

- Sign in to Windows Server 2012 and view the Windows Server 2012 desktop
- Add a feature by Using the Add Roles and Features Wizard
- View role-related events
- Run the Best Practice Analyzer for a role
- List the tools available from Server Manager
- Restart Windows Server 2012

Configuring Windows Remote Management

When deciding to use Remote Management, consider the following:

- You are more likely to manage a server remotely than by locally logging on
- With WinRM, you can use consoles, command-line utilities, or Windows PowerShell to perform remote management tasks
- With Remote Desktop, you can log on to a server locally or from across the network

Lesson 3: Installing Windows Server 2012

- Installation Methods

Installation Types

Hardware Requirements for Windows Server 2012

Installing Windows Server 2012

Installation Methods

Windows Server 2012 deployment method options include:

Optical disk

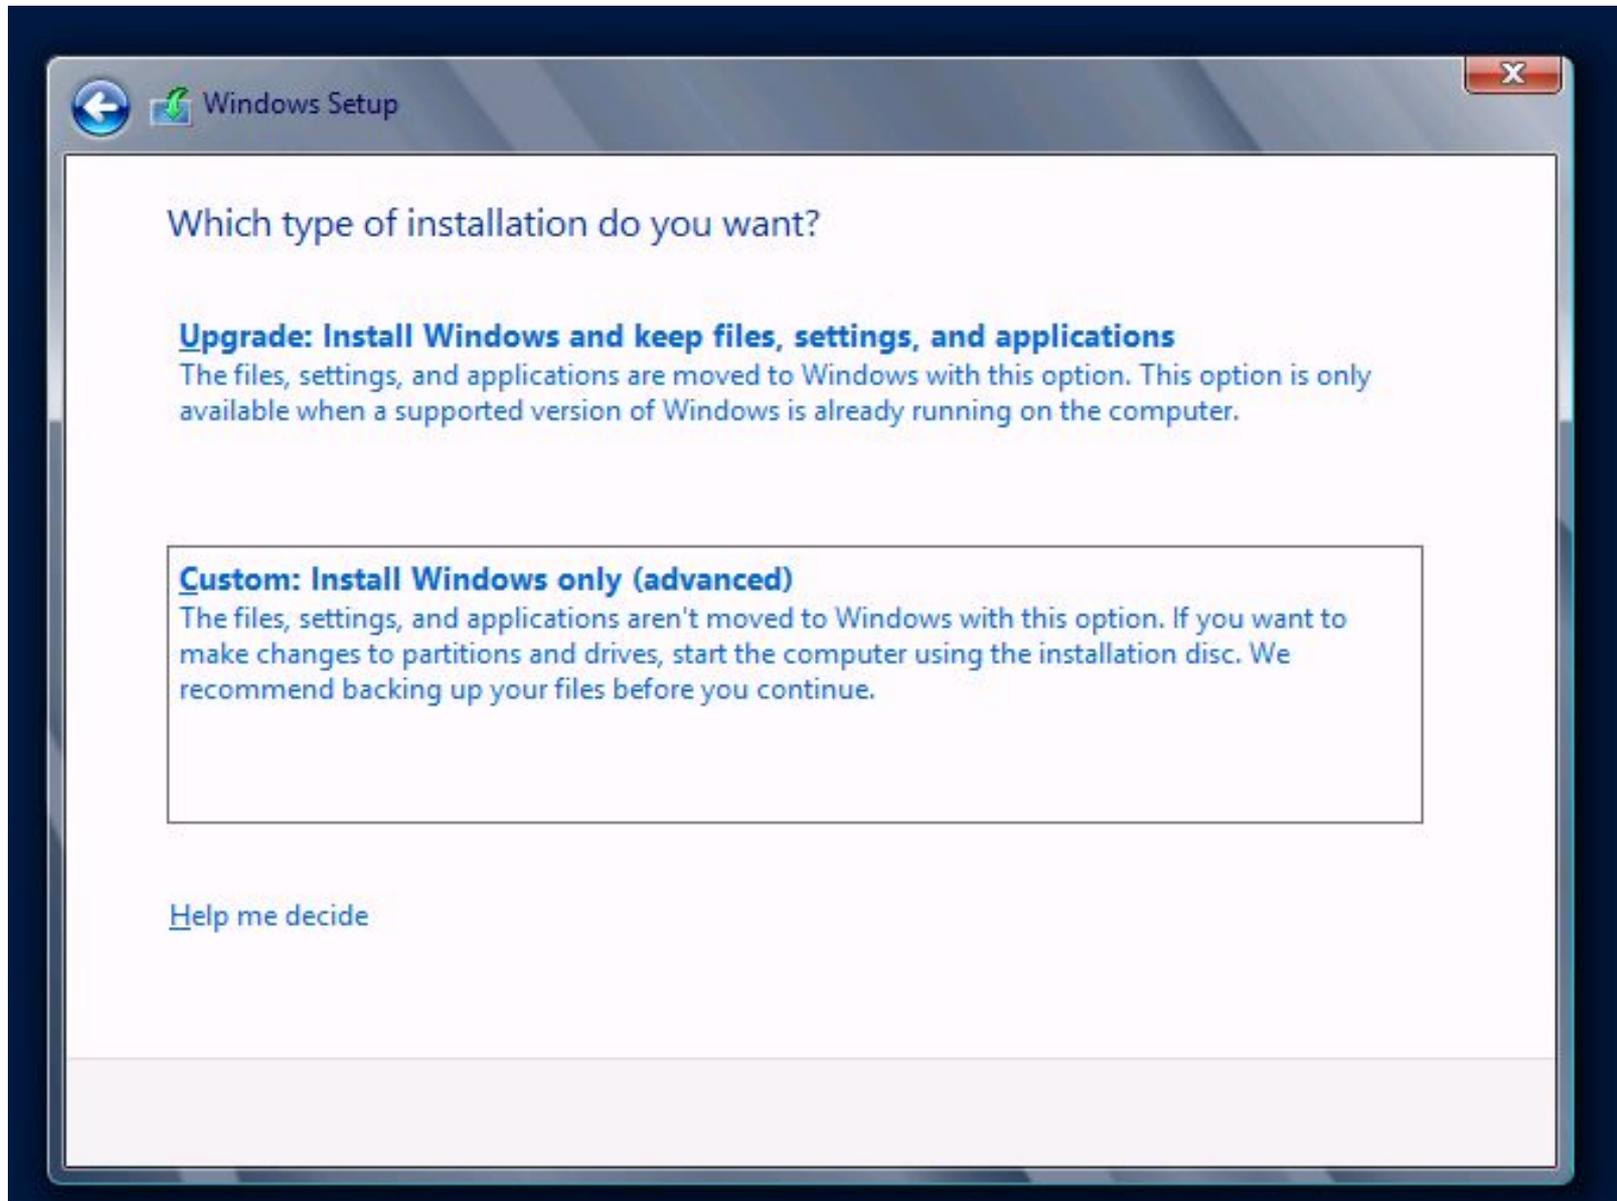

Windows DS

USB media

Installation Types

Hardware Requirements for Windows Server 2012

Windows Server 2012 has the following minimum hardware requirements:

- Processor architecture x86-64
- Processor speed 1.4 GHz
- Memory (RAM) 512 MB
- Hard disk drive space 32 GB
 - More hard disk drive space is needed if the server has more than 16 GB of RAM

Installing Windows Server 2012

Windows Setup

Language to install: English (United States)

Time and currency format: English (United States)

Keyboard or input method: US

Enter your language and other preferences and click "Next" to continue.

How to Join a Domain

Information necessary for a domain join:

- Domain name
- Account with permission to join computer to domain

Computer Name/Domain Changes

You can change the name and the membership of this computer. Changes might affect access to network resources.

Computer name:
WaggaWagga

Full computer name:
WaggaWagga.Adatum.com

More...

Member of

Domain:
Adatum.com

Workgroup:

OK Cancel

Configuring a Server Core Installation

```
Administrator: C:\Windows\system32\cmd.exe - sconfig
=====
                          Server Configuration
=====
1) Domain/Workgroup:           Workgroup: WORKGROUP
2) Computer Name:             WIN-FUI4J6187ER
3) Add Local Administrator
4) Configure Remote Management Failure
5) Windows Update Settings:   Manual
6) Download and Install Updates
7) Remote Desktop:           Disabled
8) Network Settings
9) Date and Time
10) Help improve the product with CEIP Participating
11) Windows Activation
12) Restore Graphical User Interface <GUI>
13) Log Off User
14) Restart Server
15) Shut Down Server
16) Exit to Command Line

Enter number to select an option: _
```

Lesson 5: Introduction to Windows PowerShell

- What Is Windows PowerShell?
 - Windows PowerShell Cmdlet Syntax
 - Common Cmdlets for Server Administration
 - What Is Windows PowerShell ISE?
 - Demonstration: Using Windows PowerShell
 - Demonstration: Using Windows PowerShell ISE

What Is Windows PowerShell?

Administrator: Windows PowerShell

```
Name                                     ModuleName
----                                     -
Set-BCAuthentication                   BranchCache
Set-BCCache                             BranchCache
Set-BCDataCacheEntryMaxAge             BranchCache
Set-BCMinSMBLatency                   BranchCache
Set-BCSecretKey                         BranchCache
Set-ClusteredScheduledTask            ScheduledTasks
Set-DAClientExperienceConfiguration    DirectAccessClientComponents
Set-DAEntryPointTableItem             DirectAccessClientComponents
Set-Disk                               Storage
Set-DnsClient                          DnsClient
Set-DnsClientGlobalSetting            DnsClient
Set-DnsClientNrptGlobal               DnsClient
Set-DnsClientNrptRule                 DnsClient
Set-DnsClientServerAddress            DnsClient
Set-DtcAdvancedHostSetting            MsDtc
Set-DtcAdvancedSetting                MsDtc
Set-DtcClusterDefault                 MsDtc
Set-DtcClusterTMMapping                MsDtc
Set-DtcDefault                         MsDtc
Set-DtcLog                             MsDtc
Set-DtcNetworkSetting                 MsDtc
Set-DtcTransaction                     MsDtc
Set-DtcTransactionsTraceSession        MsDtc
Set-DtcTransactionsTraceSetting        MsDtc
Set-InitiatorPort                     Storage
Set-iSCSIChapSecret                   iSCSI
Set-LogProperties                       PSDiagnostics
Set-MMAgent                            MMAgent
Set-NCSPolicyConfiguration            NetworkConnectivityStatus
Set-Net6to4Configuration               NetworkTransition
Set-NetAdapter                         NetAdapter
Set-NetAdapterAdvancedProperty         NetAdapter
Set-NetAdapterBinding                 NetAdapter
Set-NetAdapterChecksumOffload         NetAdapter
```

Windows PowerShell Cmdlet Syntax

Windows PowerShell Cmdlet Syntax:

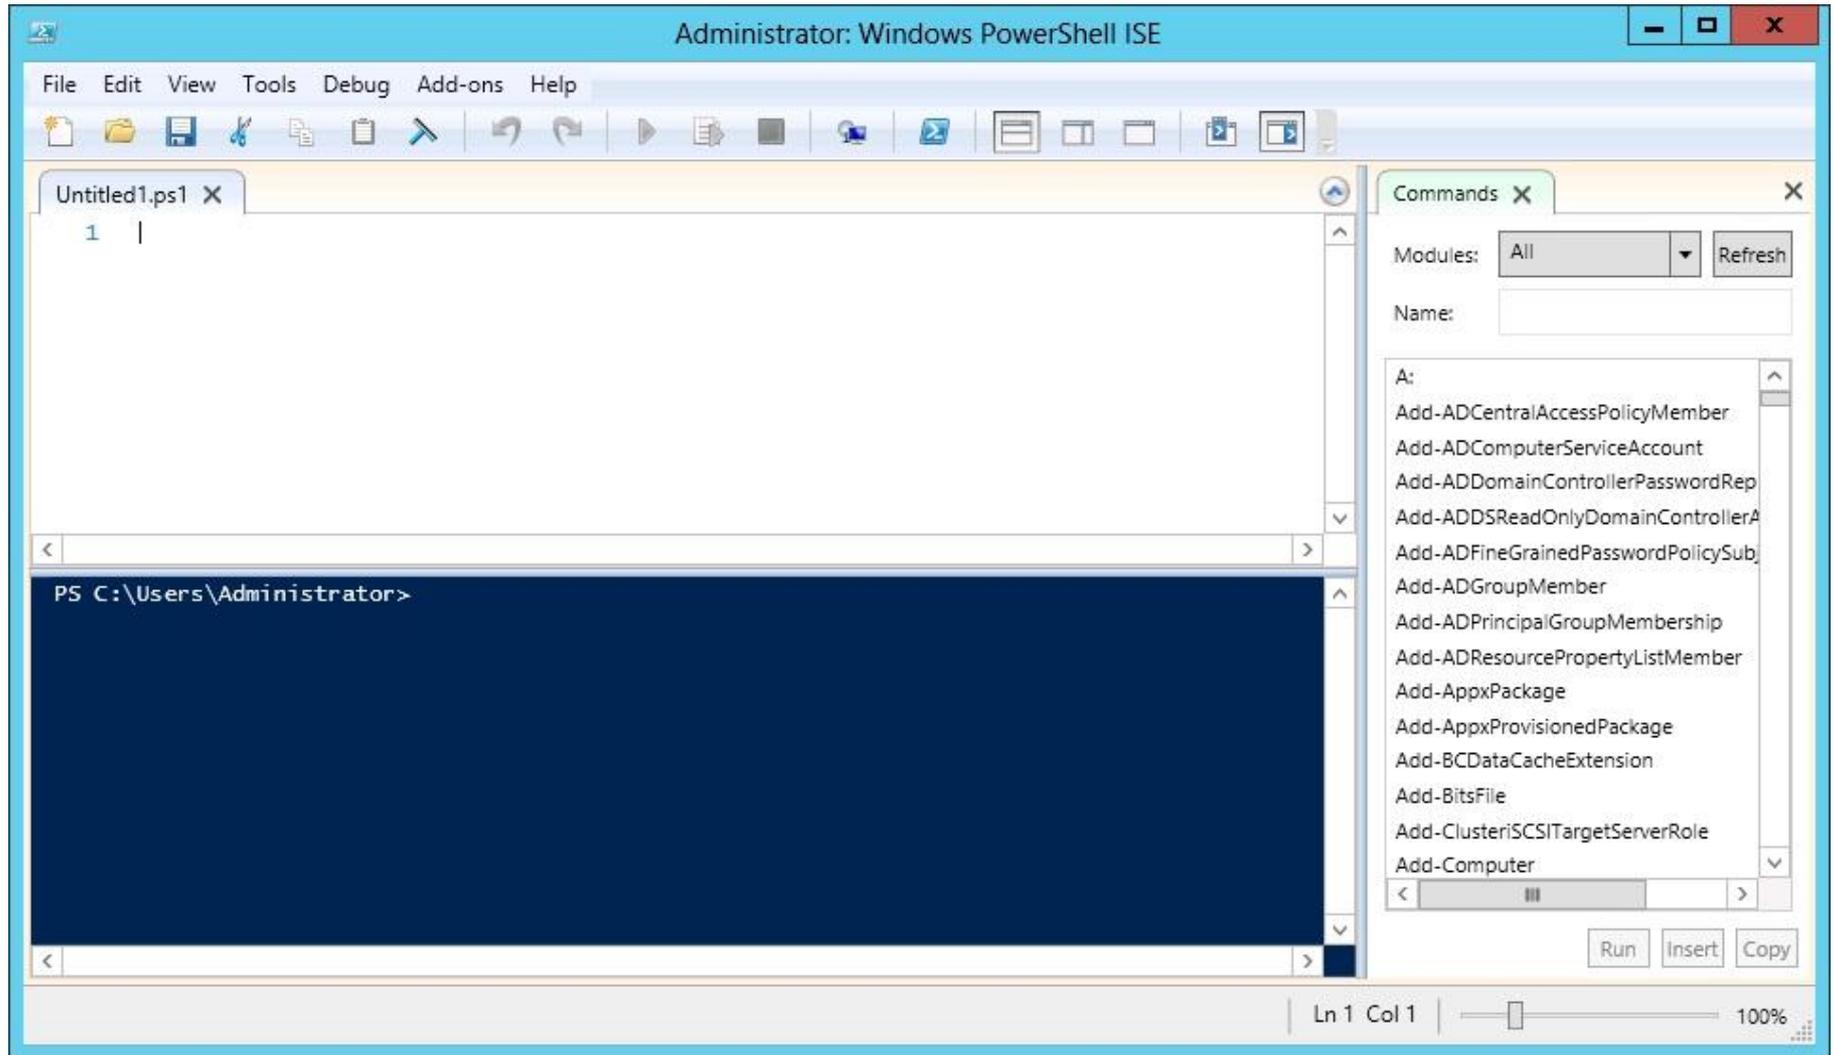

- Get-Help -Noun
NounName
- Get-Help -Verb
VerbName
- Help *CmdletName*
- Get-Command

Capability	Name
-----	----
CIM	Set-BCAuthentication
CIM	Set-BCCache
CIM	Set-BCDataCacheEntryMaxAge
CIM	Set-BCMinSMBLatency
CIM	Set-BCSecretKey
CIM	Set-ClusteredScheduledTask
CIM	Set-DAClientExperienceConfiguration
CIM	Set-DAEntryPointTableItem
CIM	Set-Disk
CIM	Set-DnsClient
CIM	Set-DnsClientGlobalSetting
CIM	Set-DnsClientNrptGlobal
CIM	Set-DnsClientNrptRule
CIM	Set-DnsClientServerAddress
CIM	Set-DtcAdvancedHostSetting
CIM	Set-DtcAdvancedSetting
CIM	Set-DtcClusterDefault
CIM	Set-DtcClusterTMMapping
CIM	Set-DtcDefault
CIM	Set-DtcLog

Common Cmdlets for Server Administration

- Service Cmdlets
 - Use the Service noun
- Event Log Cmdlets
 - Use the Eventlog noun
- Process Cmdlets
 - Use the Process noun
- ServerManager module
 - Allows the WindowsFeature noun

What Is Windows PowerShell ISE?

Demonstration: Using Windows PowerShell

- In this demonstration, you will see how to use Windows PowerShell to display the running services and processes on a server

Demonstration: Using Windows PowerShell ISE

In this demonstration, you will see how to:

- Use Windows PowerShell ISE to import the ServerManager module
- View the cmdlets made available in the ServerManager module
- Use the Get-WindowsFeature cmdlet from Windows PowerShell ISE

Lab: Deploying and Managing Windows Server 2012

- Exercise 1: Deploying Windows Server 2012
- Exercise 2: Configuring Windows Server 2012 Server Core
- Exercise 3: Managing Servers
- Exercise 4: Using Windows PowerShell to Manage Servers
