

The world in the future

- The XXI-st century. What does it bear to us? We will try to generalise the most improbable forecasts, but thus all of them are based on nowadays existing workings out.

We represent to your attention average attempts to foretell that expects us in 2030.

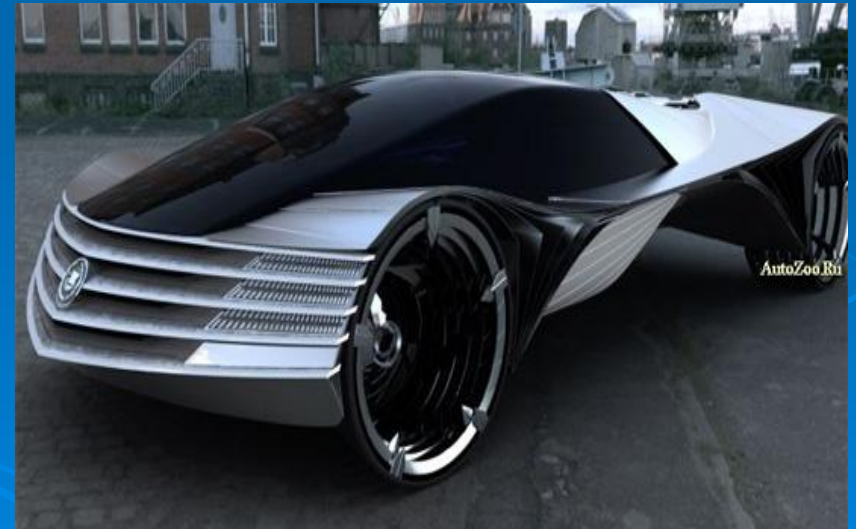

- The mankind will be united in the global network consisting not only from computers, but also the people, to everyone own ip-address will be appropriated. It will be possible to fix each step, and after a while to reproduce in case of need.

- Cars with what we know them, will be gone from our roads. Roads will probably disappear also, leaving a place only for air transport.

- The car will work thanks to own mini to a nuclear reactor. (The such exists already and now, but widely is not used)

The urbanization will reach 60 % by 2030. The overwhelming part of the population will live in megacities.

- Such concert hall exists and now, by 2030 all concert halls will be such.

- In 2030 there will be phones-projectors. Phone puts on on a wrist, as a bracelet. It does not have screen, but all images are projected on an external part of a brush.

- The school portfolio evolves in the laptop.
- The digital camera fastens on an ear the same as also any of set. It differs from the usual camera that photographs memoirs of the owner. With this adaptation it will not be forgotten anything.

- In 2030 robots will beat a Brazilian national team in football.
- In 10 years the progressive mankind will forget about paper newspapers - it on change electronic interactive touch newspapers of the future will come

- Founders of robots-reporters promise that their all-knowing creations can make comments on various sports competitions so well that they cannot be distinguished from commentators-people

□ People will learn to let grow finiteness

□ The backpack for personal flights will go on sale

□ The human skin will turn to the touch screen

- Revolutionary vehicle – P.U.M.A. Will be the most widely used transport in 2025.

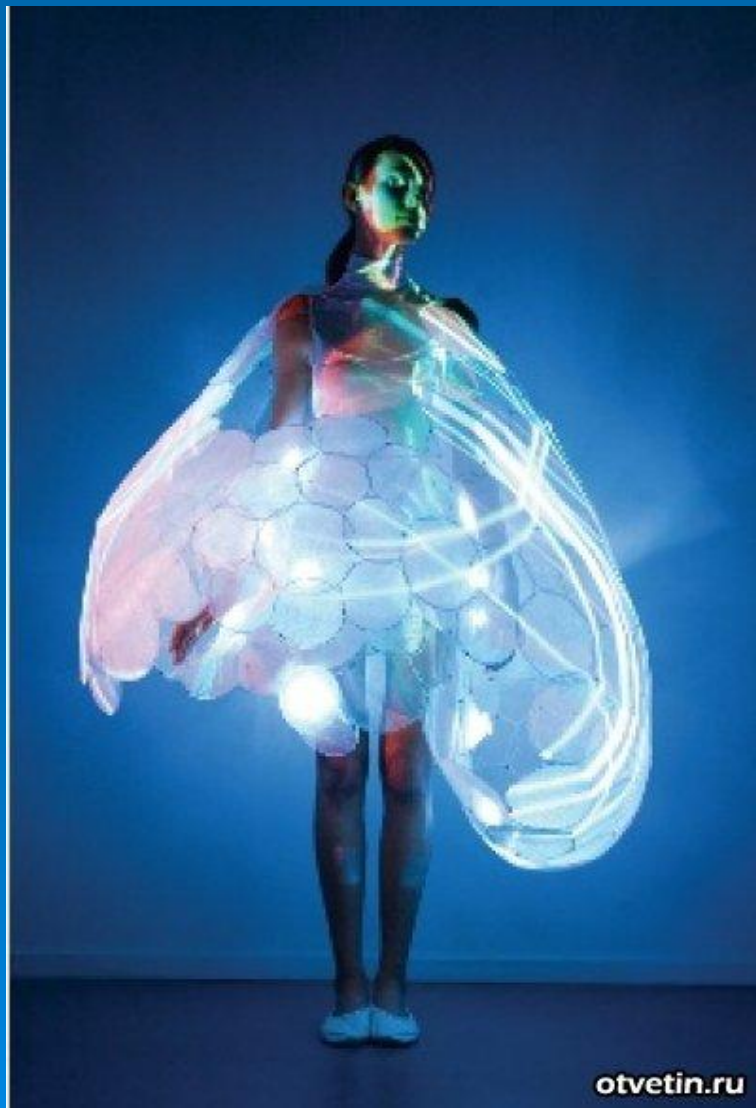

- The wireless socket by means of low-frequency electromagnetic waves charges all electrodevices in action radius.

- Oil price will rise to 300 dollars per barrel
- In 2030 the world will see the first man with the newly grown heart
- In 2030, people will become immortal.
- Polar ice is melting. Rising sea level.
- An artificial "Sun" illuminates the dark side of Earth.
- in the future will be a new religion

What will wear in the future? Let's see...

Trailers and bikes of the future.

- Bath of the future will make bathing person for 15 minutes in a fully autonomous mode, and with drying and decontamination

Here is how we see the world of the
future

□ Thank you for your attention 😊
