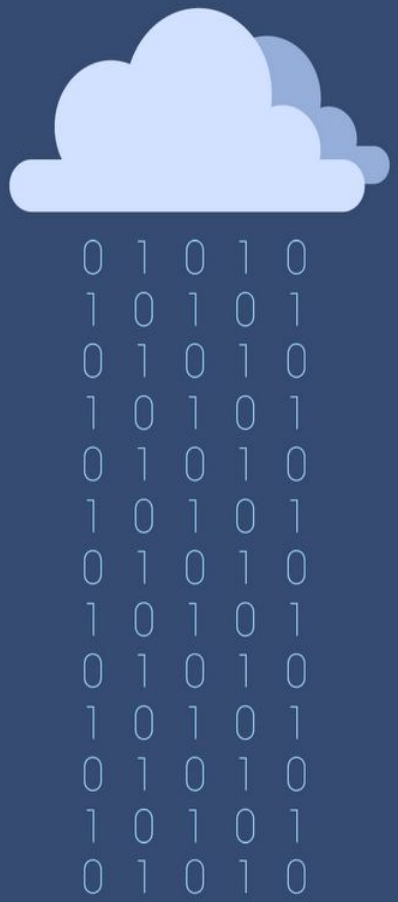
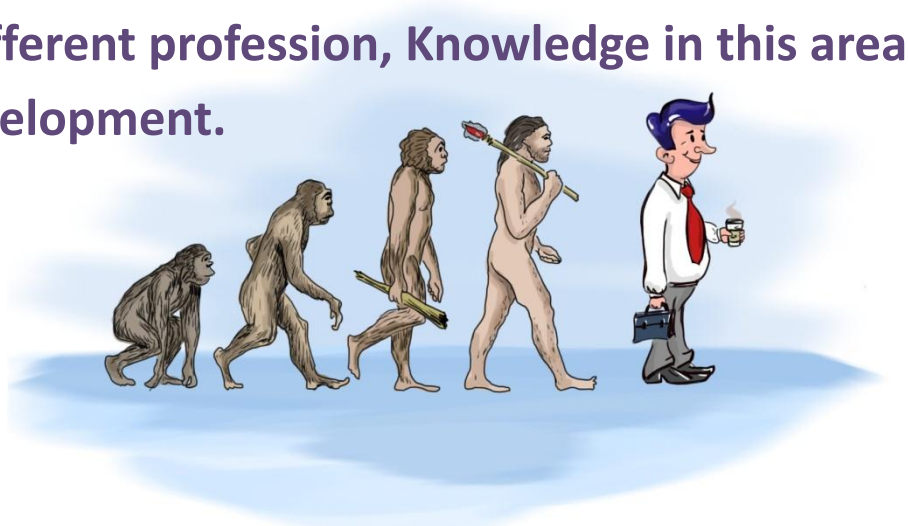
# The importance of learning how to code



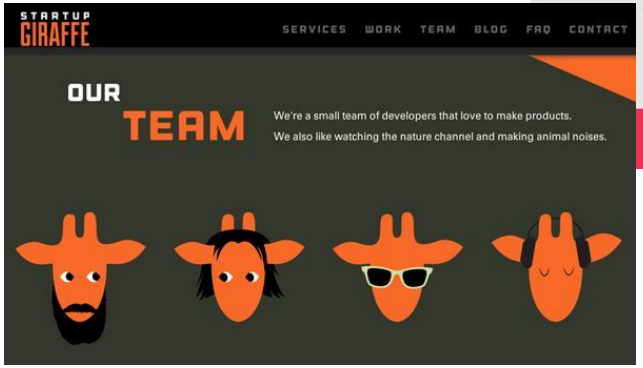
- Every day we use the results of the work of programmers.
- We use the Internet, applications, play computer games, a smart refrigerator or a split system.

SPACEX

**Even if you have chosen a different profession, Knowledge in this area is very helpful for business development.**



**For example, your own website could become a calling card for you or your company.**



I am a graduate of a professional college with a major in programming. I can tell you where and how you can use these skills in everyday life.

The programming skills will make you a more valuable frame. Whether you are an accountant, designer or copywriter.

**Programming allows you to speed up routine work. For example, when there are data from different sources and from them you need to get a certain report.**

Let's say you needed the services of a programmer. Even at the top, when you understand the design, you, at least, can clearly formulate a technical task that keeps everyone on time, money and nerves.

# Conclusion

Coding is the "new reading and writing" of our time, which, along with reading and spelling, should teach children. The future of the machines, they can replace many other professions, perform various tasks and automate the workflow.
