# ATOMIC <br> STRUCTURE 

## A guide for A level students

## ATOMIC STRUCTURE

## INTRODUCTION

This Powerpoint show is one of several produced to help students understand selected topics at AS and A2 level Chemistry. It is based on the requirements of the AQA and OCR specifications but is suitable for other examination boards.

Individual students may use the material at home for revision purposes or it may be used for classroom teaching if an interactive white board is available.

Accompanying notes on this, and the full range of AS and A2 topics, are available from the KNOCKHARDY SCIENCE WEBSITE at...

www.knockhardy.org.uk/sci.htm

Navigation is achieved by...
either clicking on the grey arrows at the foot of each page
or using the left and right arrow keys on the keyboard

## THE STRUCTURE OF ATOMS

Atoms consist of a number of fundamental particles, the most important are ...

|  | Mass / kg | Charge / C | Relative <br> mass | Relative <br> charge |
| :---: | :---: | :---: | :---: | :---: |
| PROTON |  |  |  |  |
| NEUTRON |  |  |  |  |
| ELECTRON |  |  |  |  |

## THE STRUCTURE OF ATOMS

Atoms consist of a number of fundamental particles, the most important are ...

|  | Mass $/ \mathrm{kg}$ | Charge $/ \mathrm{C}$ | Relative <br> mass | Relative <br> charge |
| :---: | :---: | :---: | :---: | :---: |
| PROTON | $1.672 \times 10^{-27}$ | $1.602 \times 10^{-19}$ | 1 | +1 |
| NEUTRON | $1.675 \times 10^{-27}$ | 0 | 1 | 0 |
| ELECTRON | $9.109 \times 10^{-31}$ | $1.602 \times 10^{-19}$ | $\frac{1}{1836}$ | -1 |

## THE STRUCTURE OF ATOMS

Atoms consist of a number of fundamental particles, the most important are ...

|  | Mass $/ \mathrm{kg}$ | Charge $/ \mathrm{C}$ | Relative <br> mass | Relative <br> charge |
| :---: | :---: | :---: | :---: | :---: |
| PROTON | $1.672 \times 10^{-27}$ | $1.602 \times 10^{-19}$ | 1 | +1 |
| NEUTRON | $1.675 \times 10^{-27}$ | 0 | 1 | 0 |
| ELECTRON | $9.109 \times 10^{-31}$ | $1.602 \times 10^{-19}$ | $\frac{1}{1836}$ | -1 |

Calculate the mass of a carbon-12 atom; it has 6 protons, 6 neutrons and 6 electrons

## THE STRUCTURE OF ATOMS

Atoms consist of a number of fundamental particles, the most important are ...

Calculate the mass of a carbon-12 atom; it has 6 protons, 6 neutrons and 6 electrons $6 \times 1.672 \times 10^{-27}+6 \times 1.675 \times 10^{-27}+6 \times 9.109 \times 10^{-31}=2.0089 \times 10^{-26} \mathrm{~kg}$

## MASS NUMBER AND ATOMIC NUMBER

Atomic Number (Z) Number of protons in the nucleus of an atom
Mass Number (A) Sum of the protons and neutrons in the nucleus

## MASS NUMBER AND ATOMIC NUMBER

Atomic Number (Z) Number of protons in the nucleus of an atom
Mass Number (A) Sum of the protons and neutrons in the nucleus

## MASS NUMBER AND ATOMIC NUMBER

Atomic Number (Z) Number of protons in the nucleus of an atom
Mass Number (A) Sum of the protons and neutrons in the nucleus

Mass Number (A)
PROTONS + NEUTRONS

Atomic Number (Z) PROTONS

THESE ALWAYS GO TOGETHER - ANYTHING WITH 11 PROTONS MUST BE SODIUM

## MASS NUMBER AND ATOMIC NUMBER

## Atomic Number (Z) Number of protons in the nucleus of an atom

Mass Number (A) Sum of the protons and neutrons in the nucleus

## MASS NUMBER AND ATOMIC NUMBER

## Atomic Number (Z) Number of protons in the nucleus of an atom

Mass Number (A) Sum of the protons and neutrons in the nucleus

## MASS NUMBER AND ATOMIC NUMBER

Atomic Number (Z) Number of protons in the nucleus of an atom
Mass Number (A) Sum of the protons and neutrons in the nucleus

MASS NUMBER AND ATOMIC NUMBER

|  | Protons | Neutrons | Electrons | Charge | Atomic <br> Number | Mass <br> Number | Symbol |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## RELATIVE MASSES

## Relative Atomic Mass $\left(A_{r}\right)$

The mass of an atom relative to the ${ }^{12} \mathrm{C}$ isotope having a value of $\mathbf{1 2 . 0 0 0}$

$$
A_{r}=\begin{gathered}
\text { average mass per atom of an element } \\
\text { mass of one atom of carbon-12 }
\end{gathered}
$$

Relative Isotopic Mass
Similar, but uses the mass of an isotope

Relative Molecular Mass ( $\mathrm{M}_{\mathrm{r}}$ )
Similar, but uses the mass of a molecule $\mathrm{CO}_{2}, \mathrm{~N}_{2}$

Relative Formula Mass
Used for any formula of a species or ion $\mathrm{NaCl}, \mathrm{OH}^{-}$

## ISOTOPES

## Definition Atoms with...

the same atomic number but different mass number or the same number of protons but different numbers of neutrons.

## ISOTOPES

## Definition Atoms with...

the same atomic number but different mass number or
the same number of protons but different numbers of neutrons.
Properties Chemical properties of isotopes are identical Physical properties (such as density) can differ

## ISOTOPES

## Definition Atoms with...

the same atomic number but different mass number or
the same number of protons but different numbers of neutrons.
Properties Chemical properties of isotopes are identical Physical properties (such as density) can differ

Theory Relative atomic masses measured by chemical methods rarely produce whole numbers but they should do (allowing for the low relative mass of the electron). This was explained when the mass spectrograph revealed that atoms of the same element could have different masses due to the variation in the number of neutrons in the nucleus. The observed mass was a consequence of the abundance of each type of isotope.

ISOTOPES OF HYDROGEN

|  | Protons | Neutrons |
| :---: | :---: | :---: |
| ${ }_{1}^{1} \mathrm{H}$ | 1 | 0 |
| ${ }_{1}^{2} \mathrm{H}$ | 1 | 1 |
| ${ }_{1}^{3} \mathrm{H}$ | 1 | 2 |

## ISOTOPES - CALCULATIONS

There are two common isotopes of chlorine. Calculate the average relative atomic mass of chlorine atoms

|  | Protons | Neutrons | $\%$ |
| :--- | :---: | :---: | :---: |
| ${ }_{{ }_{17} 75} \mathrm{Cl}$ | 17 | 18 | 75 |
| ${ }_{17}^{37} \mathrm{Cl}$ | 17 | 20 | 25 |

## ISOTOPES - CALCULATIONS

There are two common isotopes of chlorine. Calculate the average relative atomic mass of chlorine atoms

|  | Protons | Neutrons | $\%$ |
| :---: | :---: | :---: | :---: |
| ${ }_{{ }^{35} \mathrm{CI}} \mathrm{CI}$ | 17 | 18 | 75 |
| ${ }_{17}^{37} \mathrm{CI}$ | 17 | 20 | 25 |

Method 1 Three out of every four atoms will be chlorine-35

$$
\text { Average }=\frac{35}{4}+35+35+37=35.5
$$

## ISOTOPES - CALCULATIONS

There are two common isotopes of chlorine. Calculate the average relative atomic mass of chlorine atoms

|  | Protons | Neutrons | $\%$ |
| :---: | :---: | :---: | :---: |
| ${ }_{{ }^{35}} \mathrm{CI}$ | 17 | 18 | 75 |
| ${ }_{17}^{37} \mathrm{CI}$ | 17 | 20 | 25 |

## Method 1 Three out of every four atoms will be chlorine-35

$$
\text { Average }=\frac{35+35+35+37}{4}=35.5
$$

Method 2 Out of every 100 atoms 75 are ${ }^{35} \mathrm{CI}$ and 25 are ${ }^{37} \mathrm{Cl}$

$$
\text { Average }=\frac{(75 \times 35)+(25 \times 37)}{100}=35.5
$$

## MASS SPECTRA

An early application was the demonstration by Aston, (Nobel Prize, 1922), that naturally occurring neon consisted of 3 isotopes... ${ }^{20} \mathrm{Ne} \quad{ }^{21} \mathrm{Ne} \quad{ }^{22} \mathrm{Ne}$.

- positions of peaks gives atomic mass
- peak intensity gives relative abundance
- highest abundance is scaled up to $100 \%$ - other values are adjusted accordingly.

Calculate the average relative atomic mass of neon using the above information.
Out of every 100 atoms $\quad 90.92$ are ${ }^{20} \mathrm{Ne}, 0.26$ are ${ }^{21} \mathrm{Ne}$ and 8.82 are ${ }^{22} \mathrm{Ne}$

$$
\text { Average }=\frac{(90.92 \times 20)+(0.26 \times 21)+(8.82 \times 22)=20.179}{100}
$$

Relative atomic mass $=20.18$

## MASS SPECTRA

Naturally occurring potassium consists of potassium-39 and potassium-41. Calculate the percentage of each isotope present if the average is 39.1 .

Assume there are x nuclei of ${ }^{39} \mathrm{~K}$ in every 100 ; so there will be $(100-\mathrm{x})$ of ${ }^{41} \mathrm{~K}$

> so

$$
\frac{39 x+41(100-x)}{100}=39.1
$$

therefore

$$
39 x+4100-41 x=3910
$$

thus $\quad-2 x=-190$
and $\quad x=95$
ANSWER There will be $95 \%{ }^{39} \mathrm{~K}$ and

$$
5 \% \quad{ }^{41} \mathrm{~K}
$$
