

Presentation prepared by
student of the 38th school
Yasybaeva M.
Tutor: Komarova I. G.

Some tips how to be
environmentally
unfriendly in the city
of Magnitogorsk.

Magnitogorsk is always on the priority list of Russian Federation cities with the highest level of air pollution. So it eliminates any further questions about the environment. Magnitogorsk has suffered the same tragic fate of all cities where an industrial giant has become the main enterprise.

1. Turn the tap on full blast when you're brushing your teeth. And when you go for a walk too. The residents of Magnitogorsk consume only 180 thousand cubic meters of water per day. Malokizilsky water intake provides water for all. We don't live in Africa.

While someone in Magnitogorsk is splashing in the bath, a South Sudanese girl is picking up dirty water near the dry well.

2. Every day eat only meat for breakfast, lunch and dinner. Animals were created to be killed.

3. Go to the grocery with plastic bags. They decompose only in 100 years. Stupid animals are to blame that they die after swallowing plastic rubbish.

4. Don't bother yourself to go on foot. Why were cars invented?
Right, to cover the surface of rivers, seas and oceans with oil spills.
What do you think about the taste of gasoline?

5. Don't switch off the TV set when nobody is watching it. Leave it on overnight. It will really help us to welcome the global warming.

'I think nowadays winters have become warmer. 30 years ago winter temperature reached 50 degrees below zero in the Urals, while now it is hardly ever - 35 degrees Celsius'.

Nadezhda Ivanovna.
She has been living
in the Chelyabinsk
region for 50 years.

6. Tear the flowers in the meadow to put them in a vase. Fresh flowers look more beautiful than decorative. Break bushes and trees. Don't worry about the oxygen. No one has suffocated yet.

7. Leave all the mess to janitors.
They a paid for cleaning, after all.

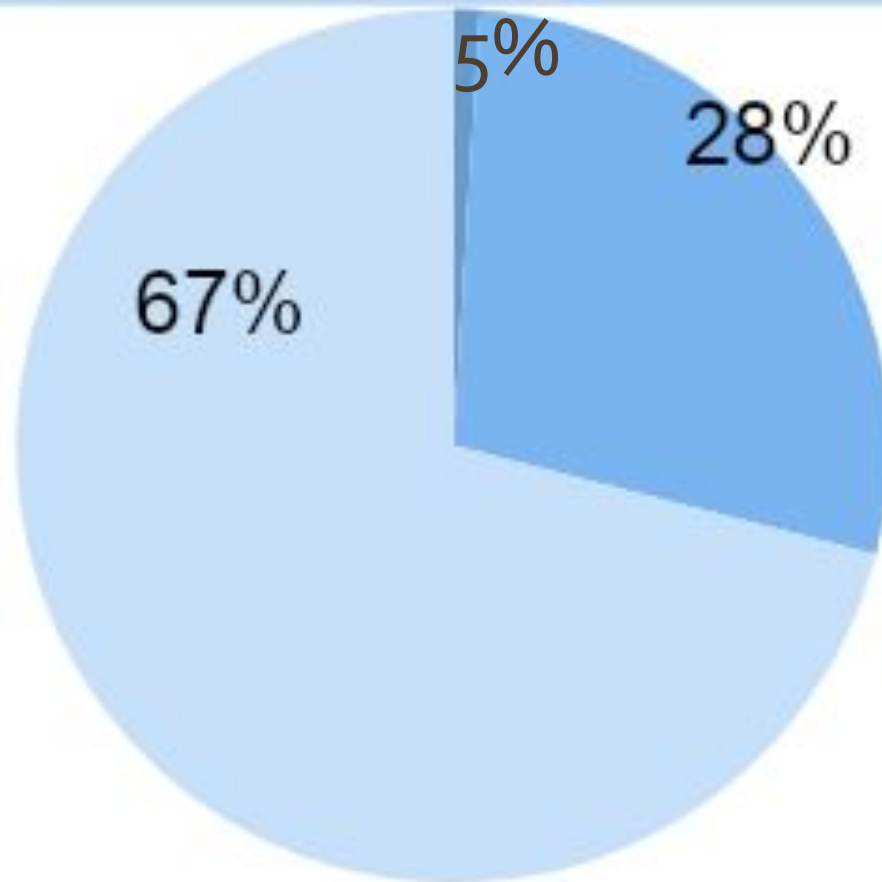

8. Let your economic concerns dominate over environmental issues. Increase production levels, don't waste time or money on clean-up efforts and Magnitogorsk's children will continue suffering from bronchitis, asthma and lung cancer.

Did you notice the clear sky on the previous slide? So now look at this.

The birth statistics in the Chelyabinsk region:

- absolutely healthy children
- children which are in good health
- children suffering from some diseases

The future of our hometown depends on us. To improve it I would like to suggest the following ideas: 1) building cycle lanes; 2) planting more trees and having more green areas; 3) recycling garbage; 4) using advanced environmentally friendly materials and technologies. Magnitogorsk is a little part of our planet, so let's try to save the Earth for the next generations.

Thank you for your attention!
