UKRAINE

Ukraine is one of the world's major agricultural players

- ✓ *“Temperate continental climate”* – warm summers, cold winters – and an average rainfall of about 400-700 millimeters, which makes it very conducive to crop production
- ✓ *Access to Black Sea ports and a good rail network that connects to Western Europe. This provides a competitive advantage for exports*
- ✓ *WTO membership since 2008*
- ✓ *Largest country in Europe (603.700 km²) after Russia, and is larger than any country of the EU-27*

Truck port “Yubileyny” has a favorable location at the exit from Dnepropetrovsk, very close to large transport ways of Ukraine, such as Moscow-Simferopol, Uzhgorod-Donetsk. The 3rd and 5th customs departments of Dnepropetrovsk customs service are located in offices equipped according to European standards. The work of customs departments is based on “one window” principle.

Products

Humified Compost for Gardeners, Truck Farmers and Floriculturists

It is a high-quality organic fertilizer produced on the basis of animals' manure, nutritional residues, wasted fodder, straw, sawdust and forage from agricultural farms.

This product is widely used in the agriculture, gardening, truck farming and can also be used for landscape design, mushroom and seedling growing, and lawns.

It makes the content of organic matter and microorganisms in soil higher, which improves fertility.

Potassium Humate

To recover soils and improve soil fertility (humus can be completely recovered in the 15-20 cm soil layer within 2 – 3 years)

Dnepropetrovsk

For the time being it is the only “doctor” for soil, which terminates soil degradation, stimulates natural microbial population and improves soil structure

Potassium Humate

The use of humates as feed additive for farm animals improves growth rate and resistance to unfavourable ambient conditions, decreases morbidity and mortality.

Some Information about the Manufacturing Process

- The production of organic fertilizers is an aerobic (oxygen access) biological process which transforms organic substance into soil fertilizing product, rich in nutrients.
- Due to development of a new area, i.e. “bioorganic agriculture” the demand for organic fertilizers has grown in Ukraine, that is why the Company is increasing the production of organic fertilizers up to 50 000 tons.
- EcoOrganics fertilizer is produced on the basis of pure raw material – black peat. The production technology provides for the most complete transformation of biologically active substances into plant available forms.

Dnepropetrovsk

What is Humified Compost and Potassium Humate Used For

- to increase organic matter level in the soil;
- to improve soil structure (porosity);
- to suppress development of some diseases and insects;
- to improve soil fertile layer;
- to retain moisture and nutrients in the soil;
- to reduce soil erosion;
- to increase plant resistance against diseases.

STATE REGISTRATION CERTIFICATE

Series: A No. 01657
 Issued to: Eco-Organic Ukraine, Ltd. (Ukraine)
(name of organization or company)

to certify that, according to the Law of Ukraine "On Pesticides and Agricultural Chemicals",
 preparation: "Eco-Organic" potassium humate fertilizer, liquid
(name and preparation form)

Active substance: N – not less than 100 mg/100 g, P₂O₅ – not less than 100 mg/100 g, K₂O - not less than 100 mg/100 g, potassium salt of humic acids – 0.5 to 0.6%
(name and its content)

Manufacturer of preparation form: Eco-Organic, Ltd. (Russia)

Manufacturer of active substance: Eco-Organic, Ltd. (Russia)

Scope and conditions of use: Vegetables, area under cover
 Containers: PE bottles (cans) with capacity of 0.1 to 25 l
(culture or object, containers, package and quantity, kg/l)

is registered in Ukraine up to December 31, 2018

Entry in the State Register: under No. 3431 of February 3, 2009

Business Offer

«Bioterra» Company

*Organic Fertilizers.
Manufacturing and Trading*

BIOTERRA

«Bioterra» – actively developing company. The strategic aim of the Company is manufacturing of high quality organic fertilizers according to the standards and demands of customers. The Company obtained the certificate on “Quality management system ISO 9000-2000” based on international standards in August 2007. The product has gone through all the essential testing procedures and is allowed to be in use in Ukraine.

The Company has been selling its product in Ukraine, Italia and Slovakia since the year 2007.

All the processes in our enterprise are thoroughly controlled and constantly modified according to the aims which coincide with the Company’s policy.

Humified Compost for Gardeners, Truck Farmers and Floriculturists

Do you want to improve good yield?

Humified compost from the “Bioterra” Company is just what you need! It is high-quality organic fertilizer produced on the basis of animals’ dung, nutritional remnants, old and digested fodders, straw, sawdust and graze utilized from the agricultural farms. This product is widely used in the agriculture, gardening, truck farming and also can be used in landscape design when growing mushrooms, seedlings and lawns. The “Bioterra” Company’s product has agreeable dark color doesn’t possess the smell and is an excellent source of nutrients for plants. It heightens the content of organics and microorganisms in soil which leads to its fertility.

Some Information about the Manufacturing Process

- ▣ The manufacturing of organic fertilizers is aerobic (oxygen access) biological process which transforms organic substance in the soil fertilizing component reach in nutrients. During the composting process temperatures above 50 °C can be reached. Unfavourable environment created by lots of thermophile and heat-resistant microorganisms also facilitates the extermination of pathogenic microbes.
- ▣ The manufacturing processes are provided with recourses for producing high-quality organic fertilizer. The employees' level of proficiency has been constantly evaluating and maintaining on the level essential for implementation the quality management system in order to create competitive and satisfying the client production.
- ▣ In connection with the development of the new area i.e. "bioorganic agriculture" the demand for organic fertilizers has increased in Ukraine that is why the Company is enlarging the manufacturing of organic fertilizers up to 50 000 tons.

What is the Humified Compost Used For

- For the enlarging of organic substance' level in the soil;
- For the improvement of the soil structure (porosity);
- For the suppression of some diseases and insects development;
- For the improvement of soil fertile layer;
- For the retaining the moisture and nutrients of the soil;
- For the reduction of the soil erosion;
- For the increasing of the plant's disease resistance.

The Clients of the "Bioterra" Product

- ▣ **Farmings growing agricultural planting, vegetables, fruits;**
- ▣ **Hothouse farmings;**
- ▣ **Vineyards;**
- ▣ **Gardens;**
- ▣ **Manufacturers of mixtures and soils;**
- ▣ **Manufacturers of lawns;**
- ▣ **Football and golf clubs;**
- ▣ **Seed plots;**
- ▣ **Shops of ration goods;**
- ▣ **Private cottages and farmsteads;**
- ▣ **Landscape organizations;**
- ▣ **Forestry.**

The Advantages of the "Bioterra" Product

- ❑ Doesn't contain the seeds of the weeds and disease causing organisms;
- ❑ Enlarges the maintenance of organic substances in the soil;
- ❑ Improves the physical structure of the soil;
- ❑ Doesn't oxidize the soil;
- ❑ Increases the ability of the soil to maintain the moisture and nutrients;
- ❑ Helps to fight the soil erosion;
- ❑ Increases the ability of plants to resist and fight the diseases;
- ❑ Creates the microflora variety in the soil;
- ❑ Can be added to the soil almost during the whole year on conditions that the snow cover is absent;
- ❑ Allows to carry out the sowing just after the usage of the fertilizers.
