

Гимназия №148 имени Сервантеса

Урок геометрии

8 класс

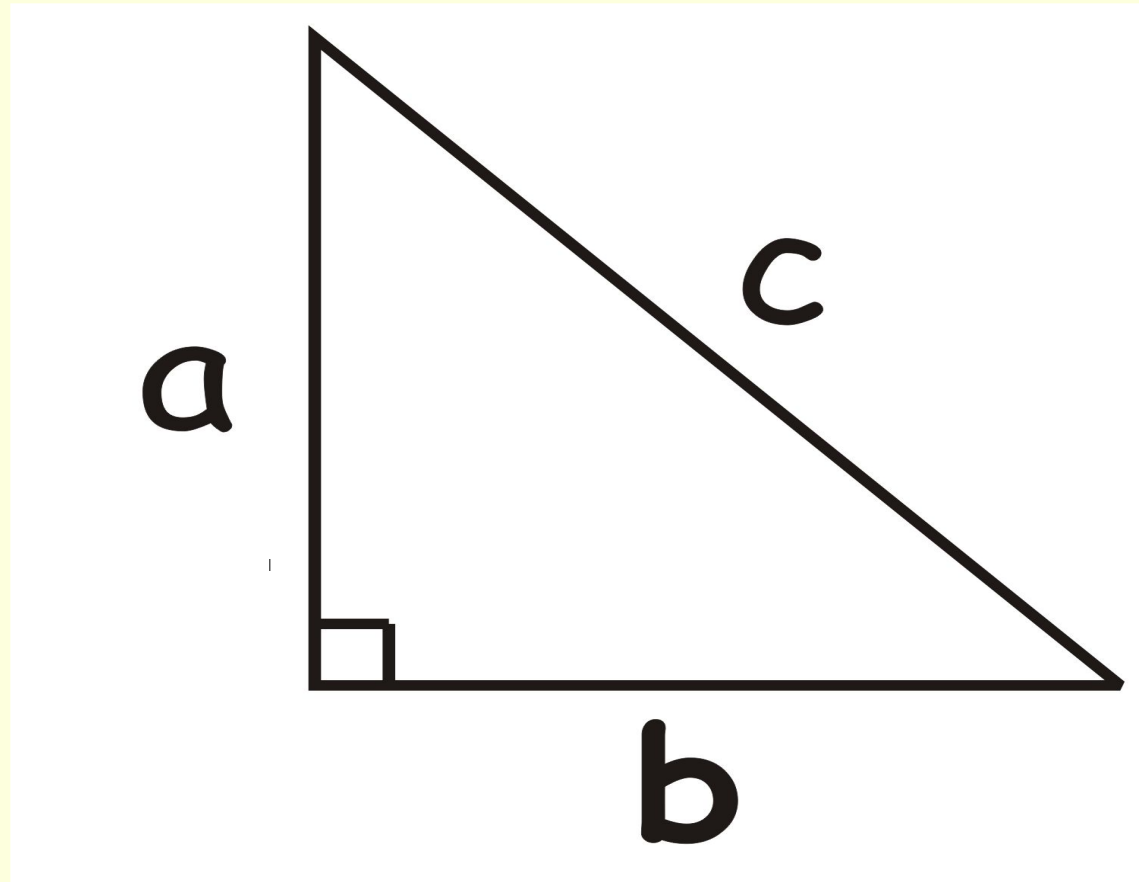

Учитель: Кондратова М.В.

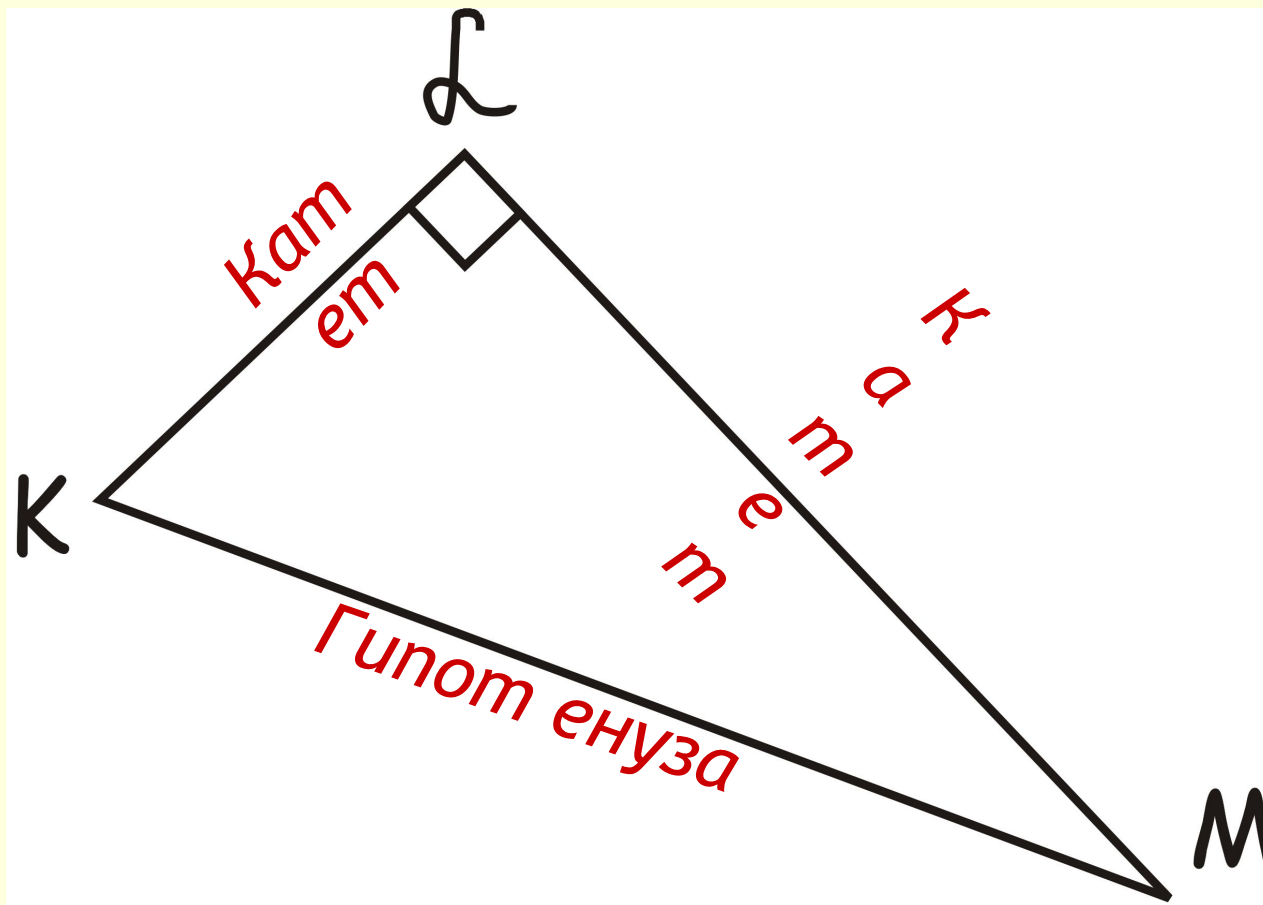

Пифагор

Пифагор

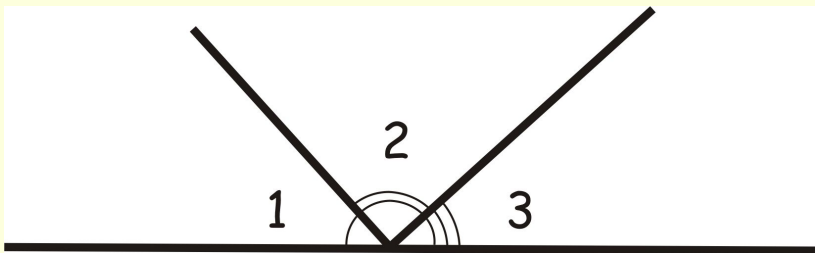

$$c^2 = a^2 + b^2$$

Прямоугольный треугольник

$$\angle 1 + \angle 3 = \angle 2$$

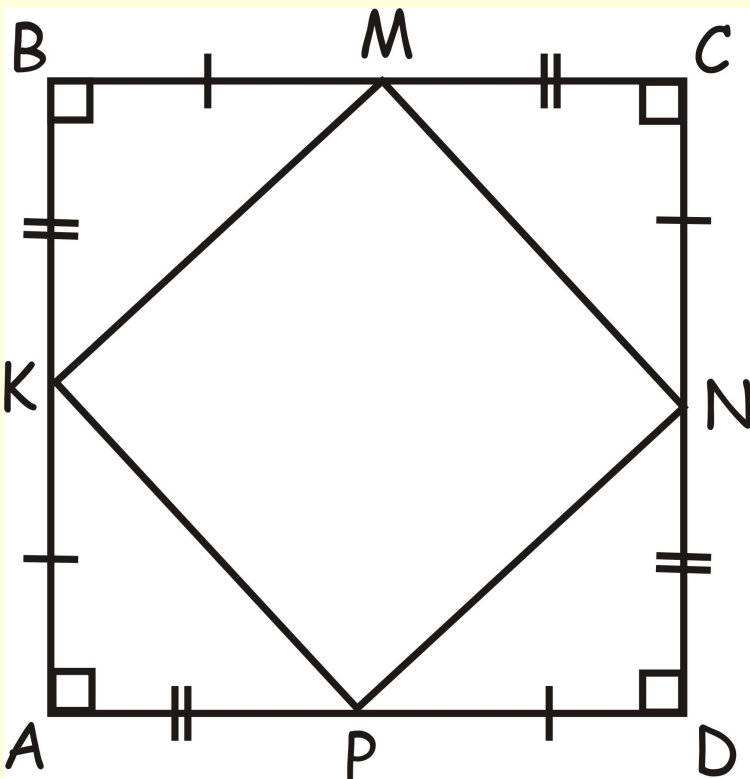

$$\angle 2 = ?$$

$$\angle 1 + \angle 2 + \angle 3 = 180^\circ$$

$$\angle 1 + \angle 3 = \angle 2$$

$$\angle 2 + \angle 2 = 180^\circ$$

$$\angle 2 = 90^\circ$$

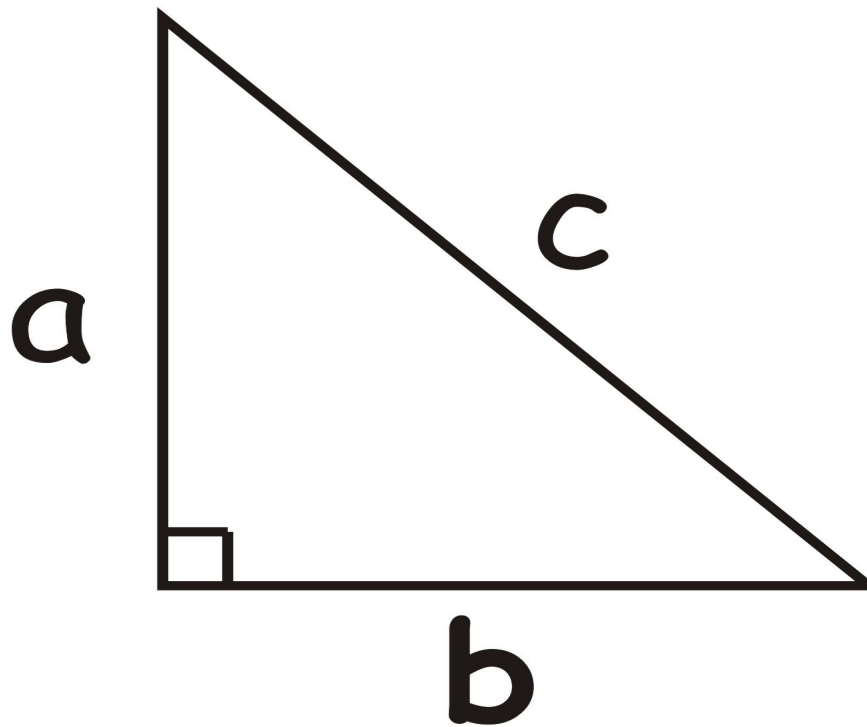

$$KMNP - ?$$

KMNP - параллелограмм

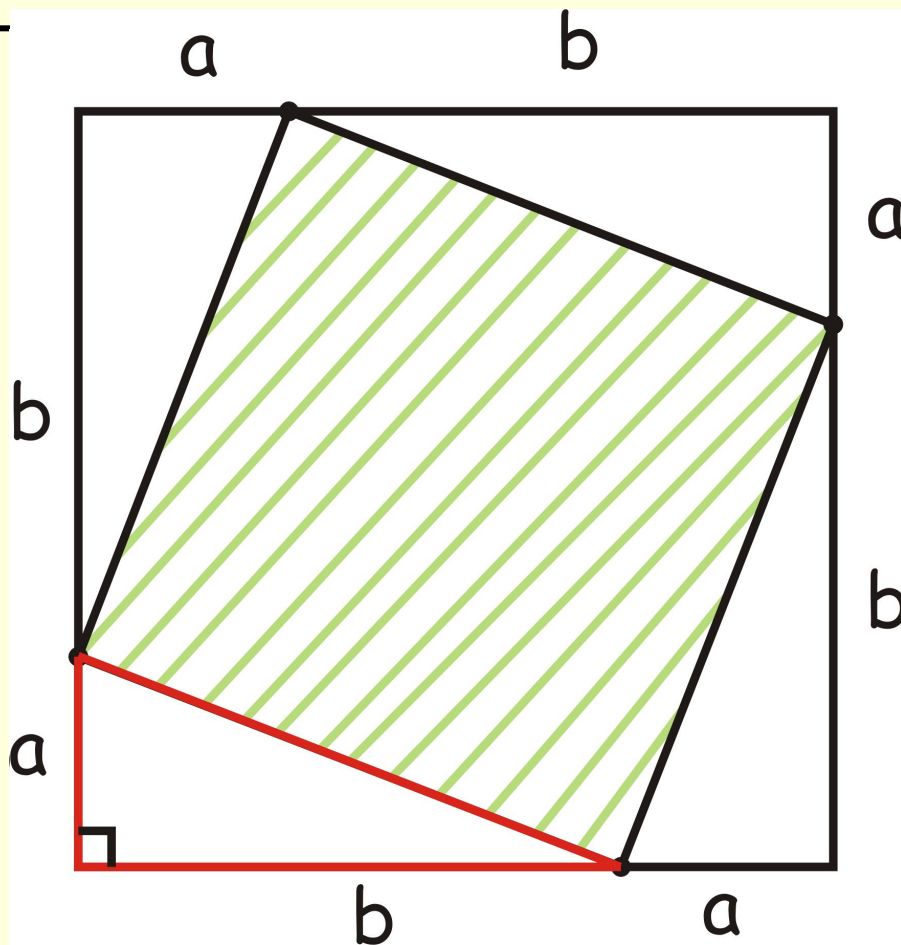

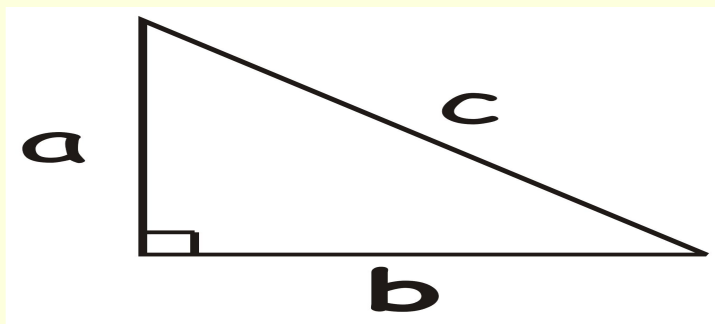

KMNP - ромб

KMNP - квадрат

Теорема Пифагора

$$c^2 = a^2 + b^2$$

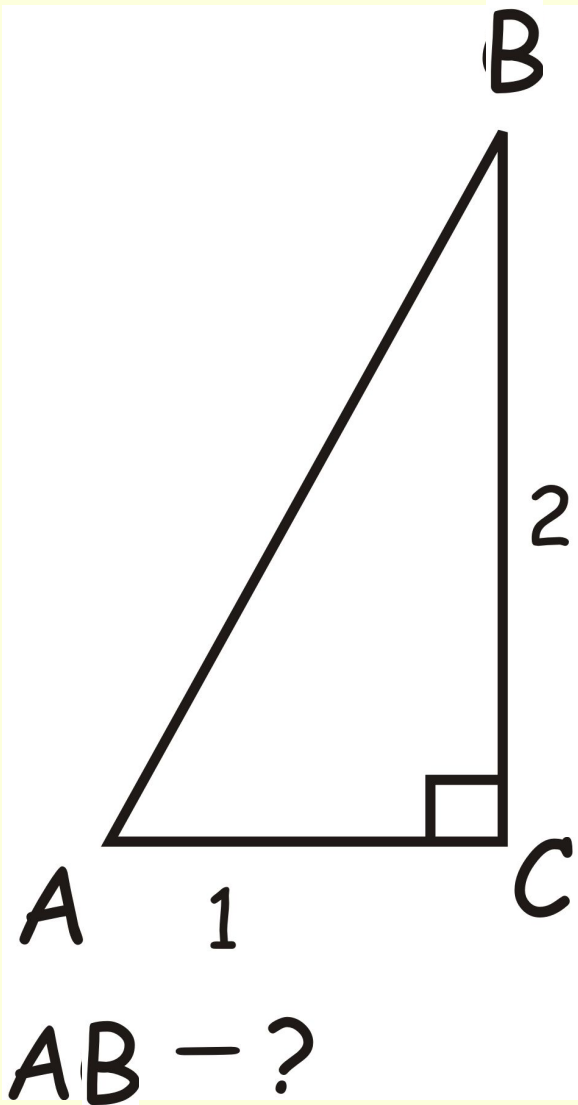

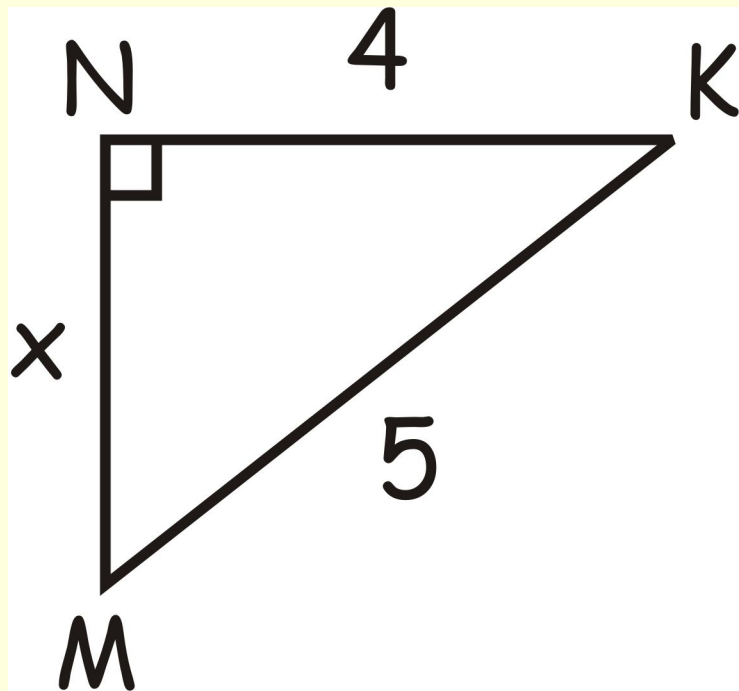

Решение:

$$(AB)^2 = 1^2 + 2^2$$

$$(AB)^2 = 5$$

$$AB = \sqrt{5}$$

MN-?

Ответ:

$$x = 3$$

Решение:

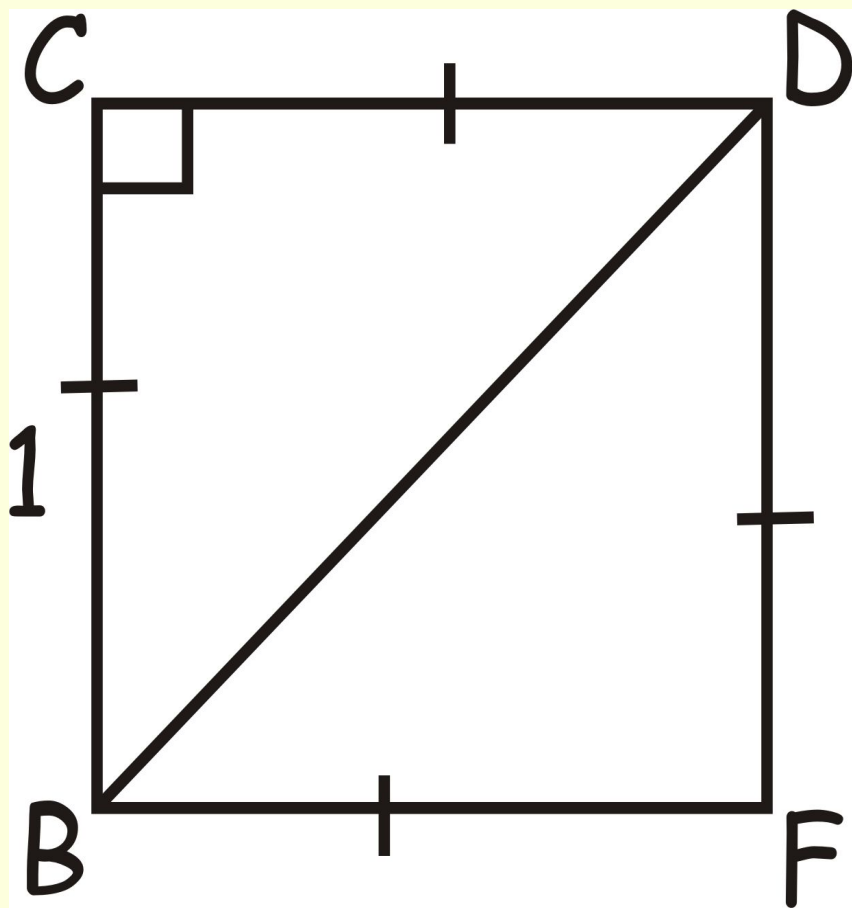

$$x^2 + 4^2 = 5^2$$

$$x^2 + 16 = 25$$

$$x^2 = 25 - 16$$

$$x^2 = 9$$

$$x = \sqrt{9}$$

$BD=?$

Решение:

$$\triangle BCD: \angle C=90^\circ; BC=CD=1$$

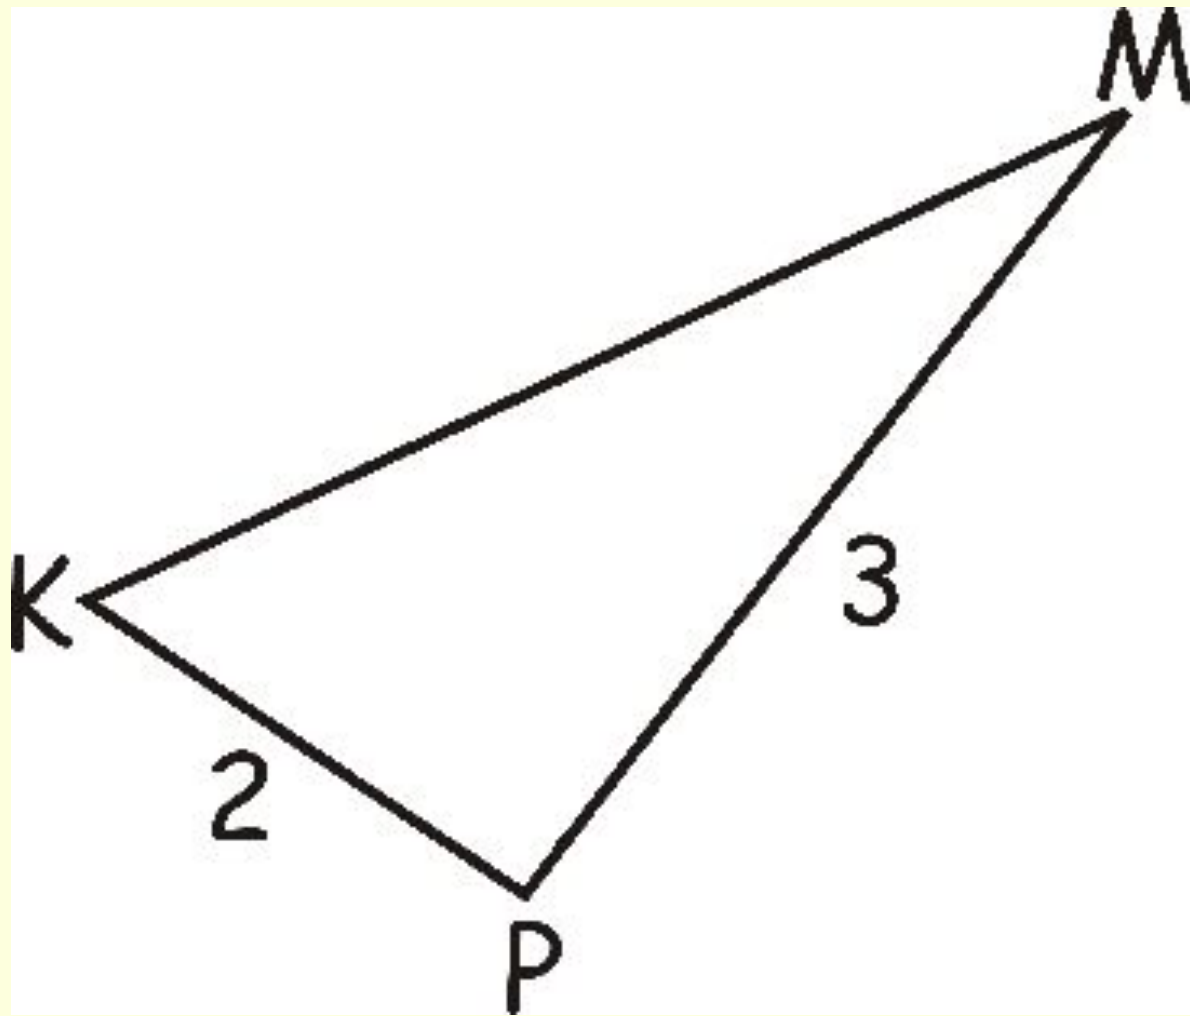

$$BD^2=1^2+1^2$$

$$BD^2=2$$

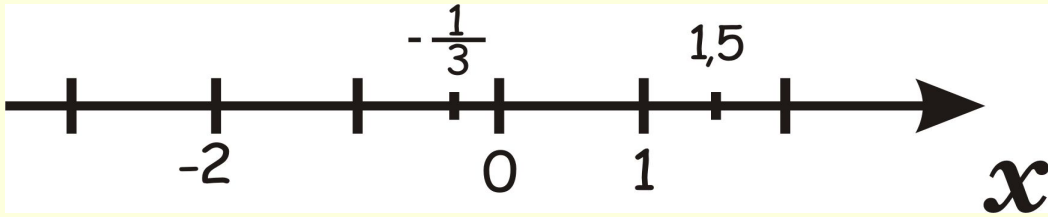

$$BD=\sqrt{2}$$

Ответ:

$$BD=\sqrt{2}$$

$$KM = ?$$

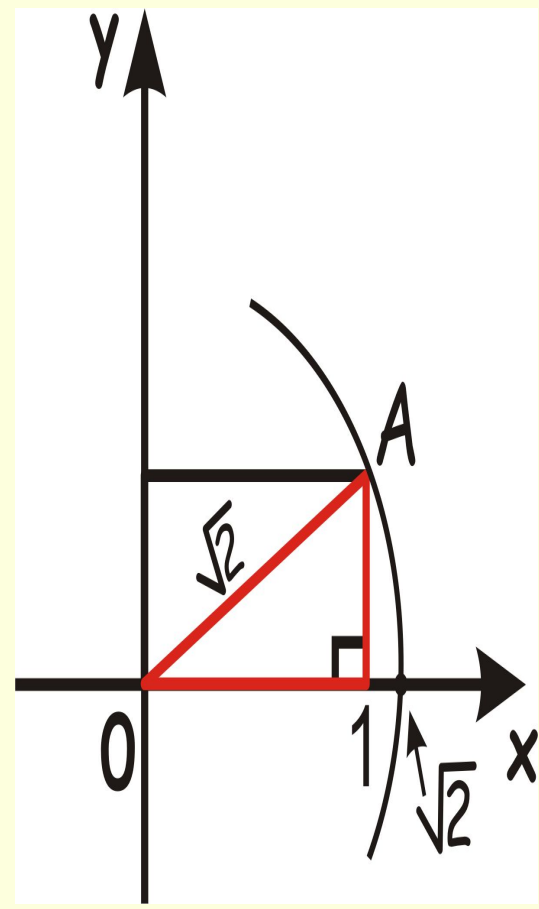

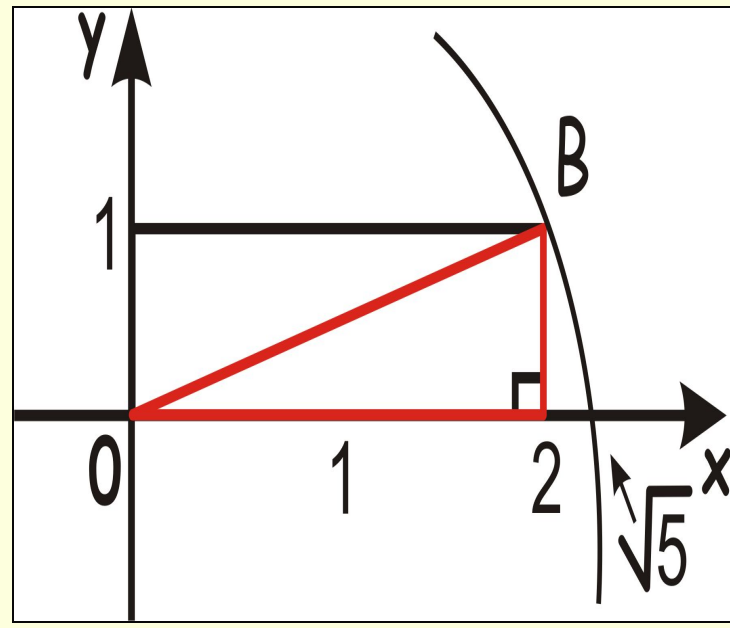

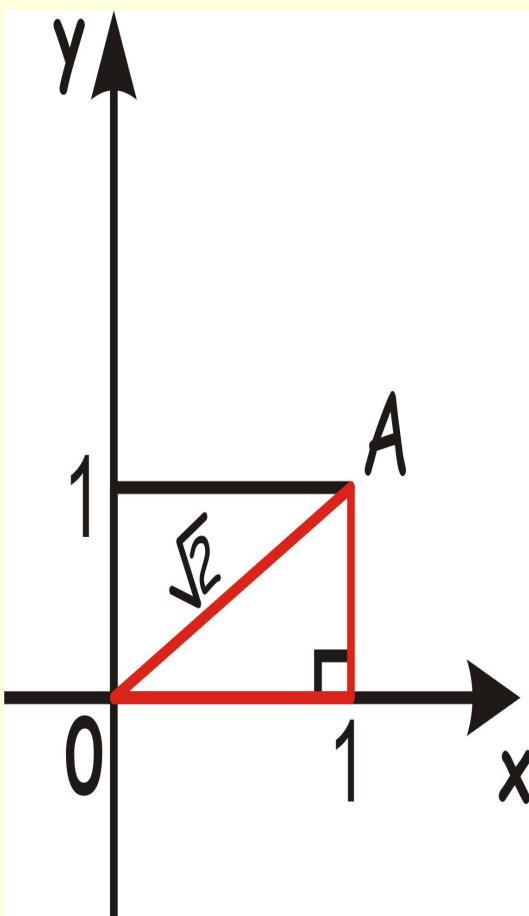

1,5

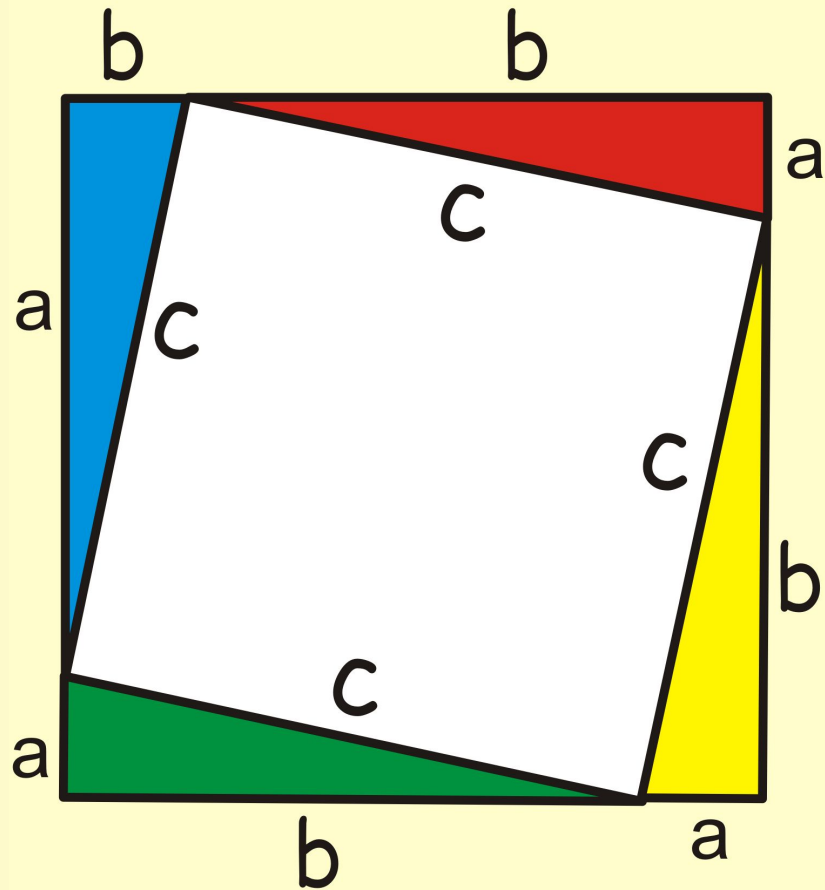

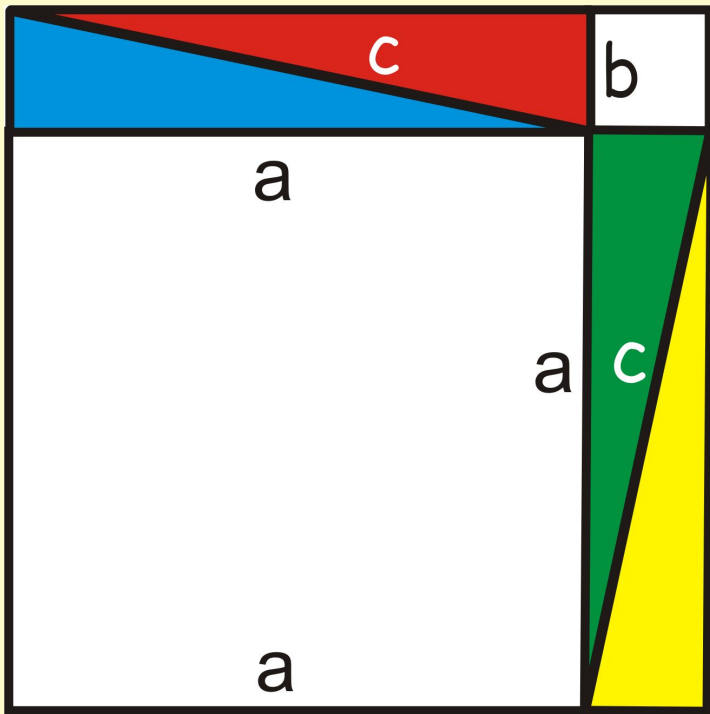

-2

$-\frac{1}{3}$

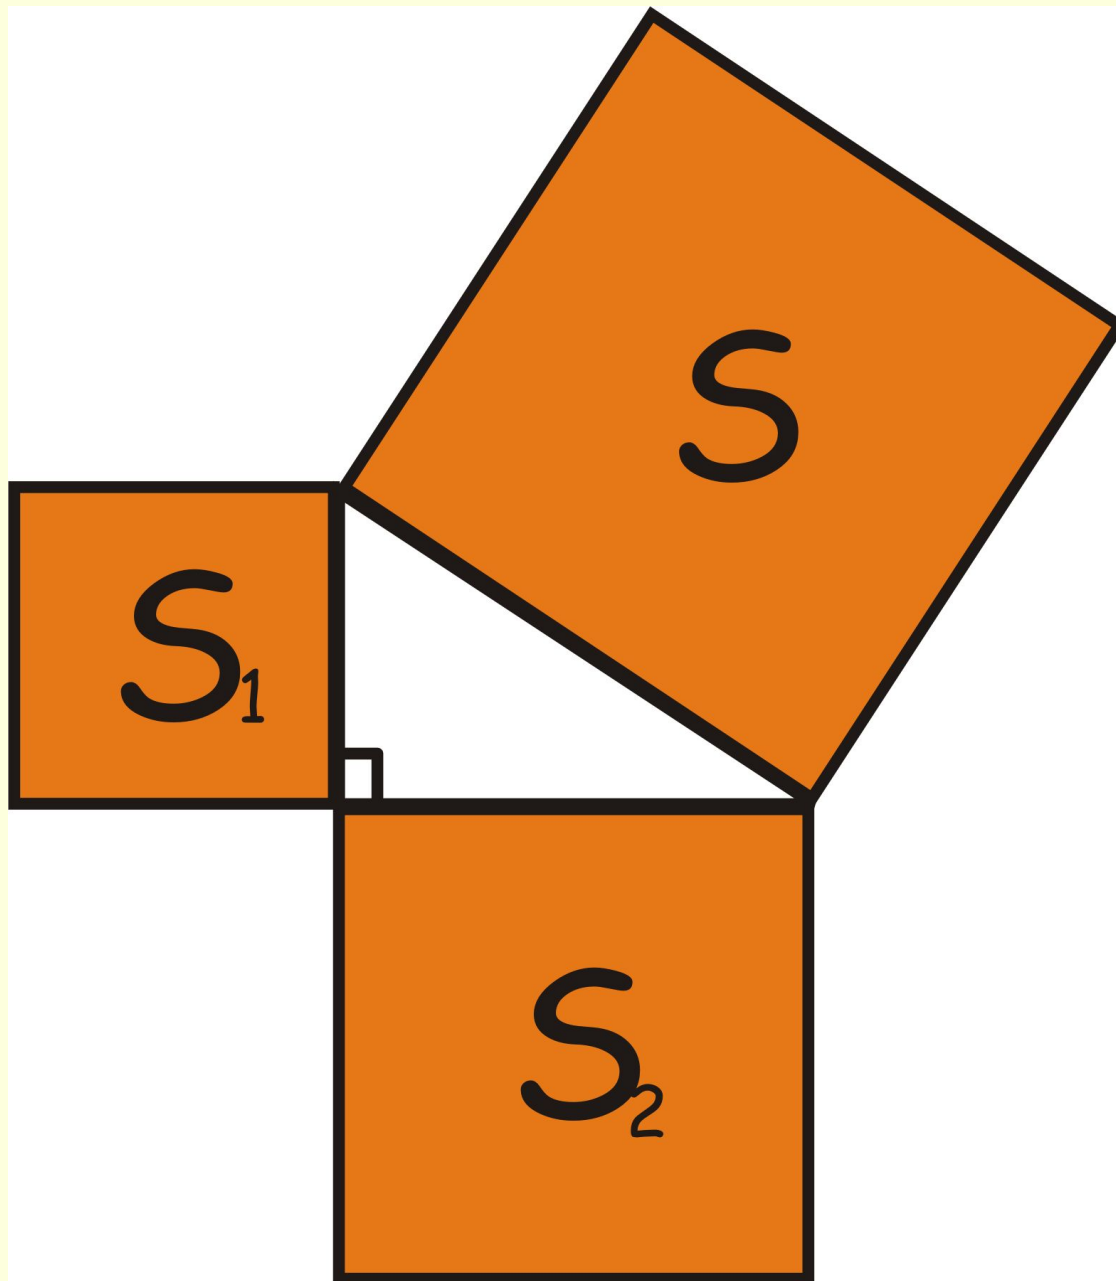

$\sqrt{2}=?$

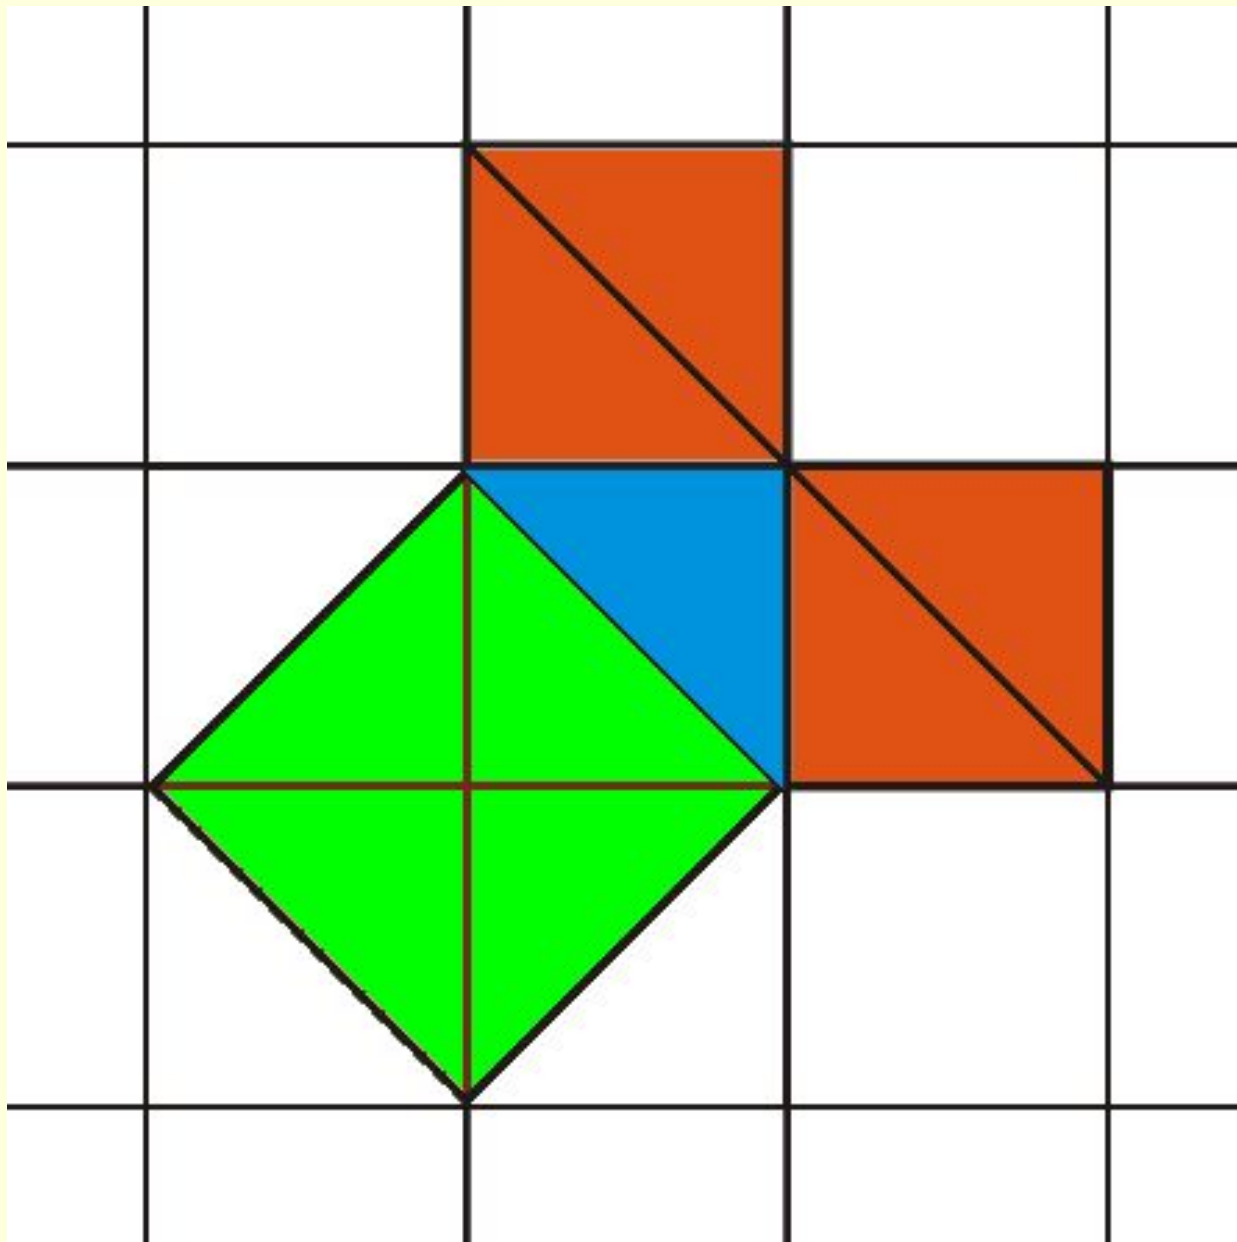

$\sqrt{2}=?$

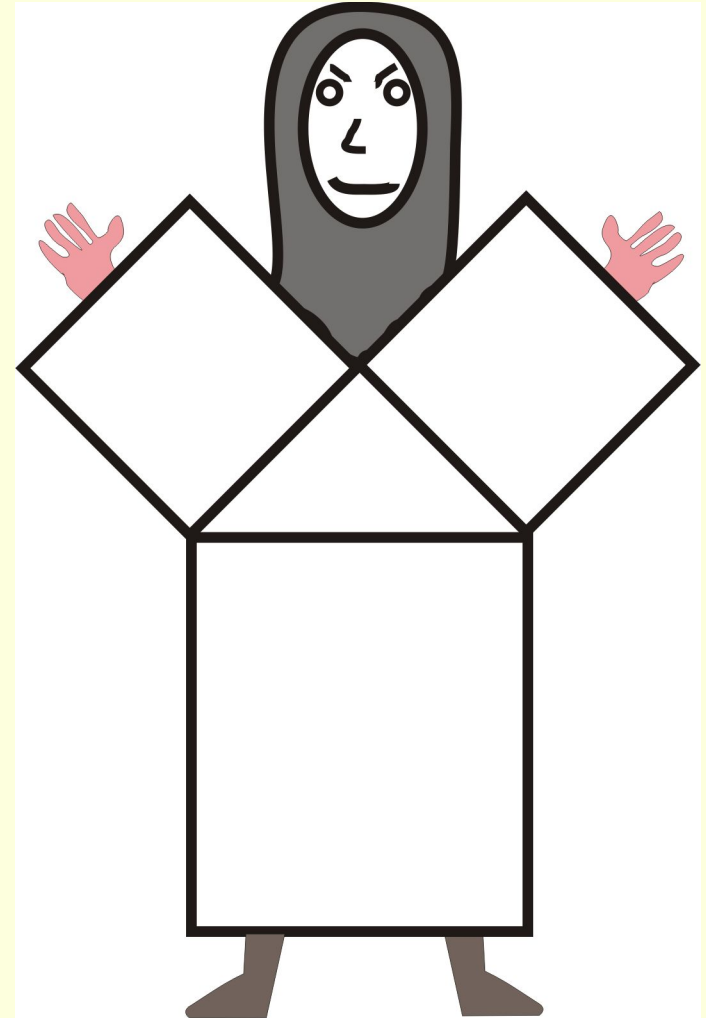

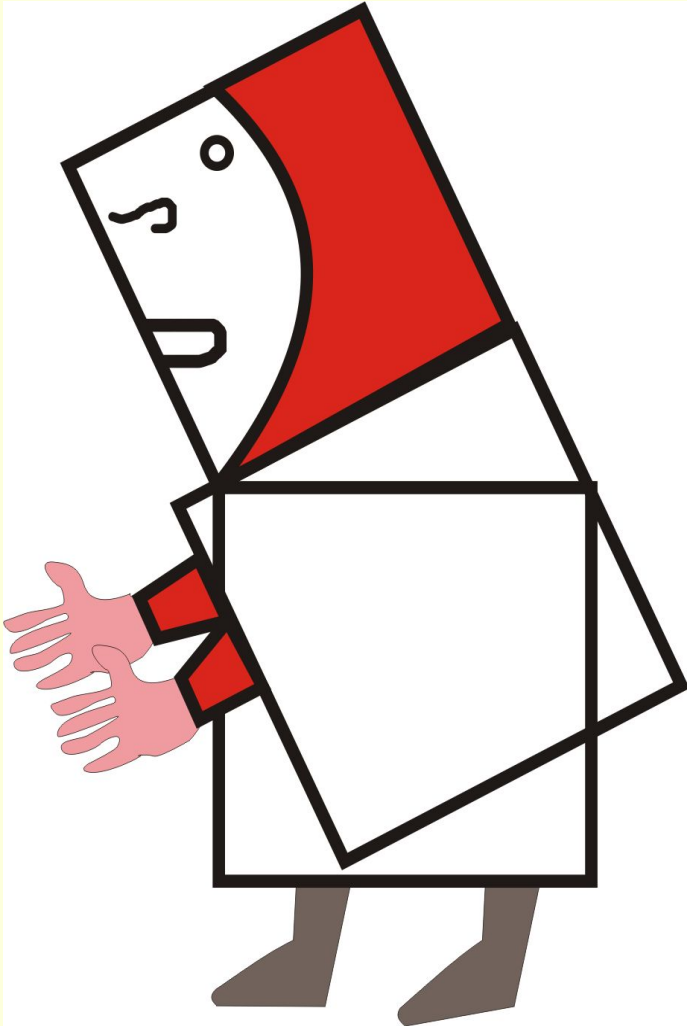

Смотри!

Пифагоровы штаны Во все стороны равны!

Спасибо
