

THE INTERNET

The internet is used to send information quickly between computers around the world

The internet was developed in the United States by the "United States Department of Defense Advanced Research Projects Agency" (DARPA).

It was first connected in October, 1969, and was called ARPANET.

The World Wide Web was created at CERN in Switzerland in 1990 by a British (UK) man named Tim Berners-Lee.

Today, people can pay money to access the internet from internet service providers. Some services on the Internet cost nothing to use. Sometimes the people who offer these free services use advertising to make money from them.

The alternative (other) name, "net" came from "inter(net)".

The thing about quotes from the internet is that it's hard to verify their authenticity."

- Abraham Lincoln

Few words about the Microsoft:

In 1975 two friends: Bill Gates and Paul Allen started Microsoft and very soon it became a business success. In 1980, Gates bought a small company which produced an operating system called DOS. He made some changes to it and renamed it MSDOS. He sold the rights to use this system to IBM. Since 1980 MSDOS has been the standard operating system for all PCs. Microsoft has also developed such well – known programmes as Windows, Excel and Internet Explorer.

Dangers on the NET

Some websites may trick people into downloading viruses that can harm a computer or spyware that spies on its users

E-mails can also have harmful files with them as "attachments".

In internet chatrooms, people might be preying on others or trying to stalk or abuse them.

The internet contains content that many people find offensive such as pornography, as well as content intended to be offensive.

Criminals may steal people's personal information or trick people into sending them money.

Thanks for attention!
