PSoC Creator 4.2
Designing with PSoC 3/5

PSoC@3/5 Interrupts

PSoC Creator 4.2
Designing with PSoC 3/5

Project Objective

- Generate interrupt for rising edge signal on pin
- Set a Flag in Interrupt Service routine (ISR)
- Increment Count variable in main code if Flag is set
- Clear the Flag in main code

Figure 1-1. Simplified Block Diagram

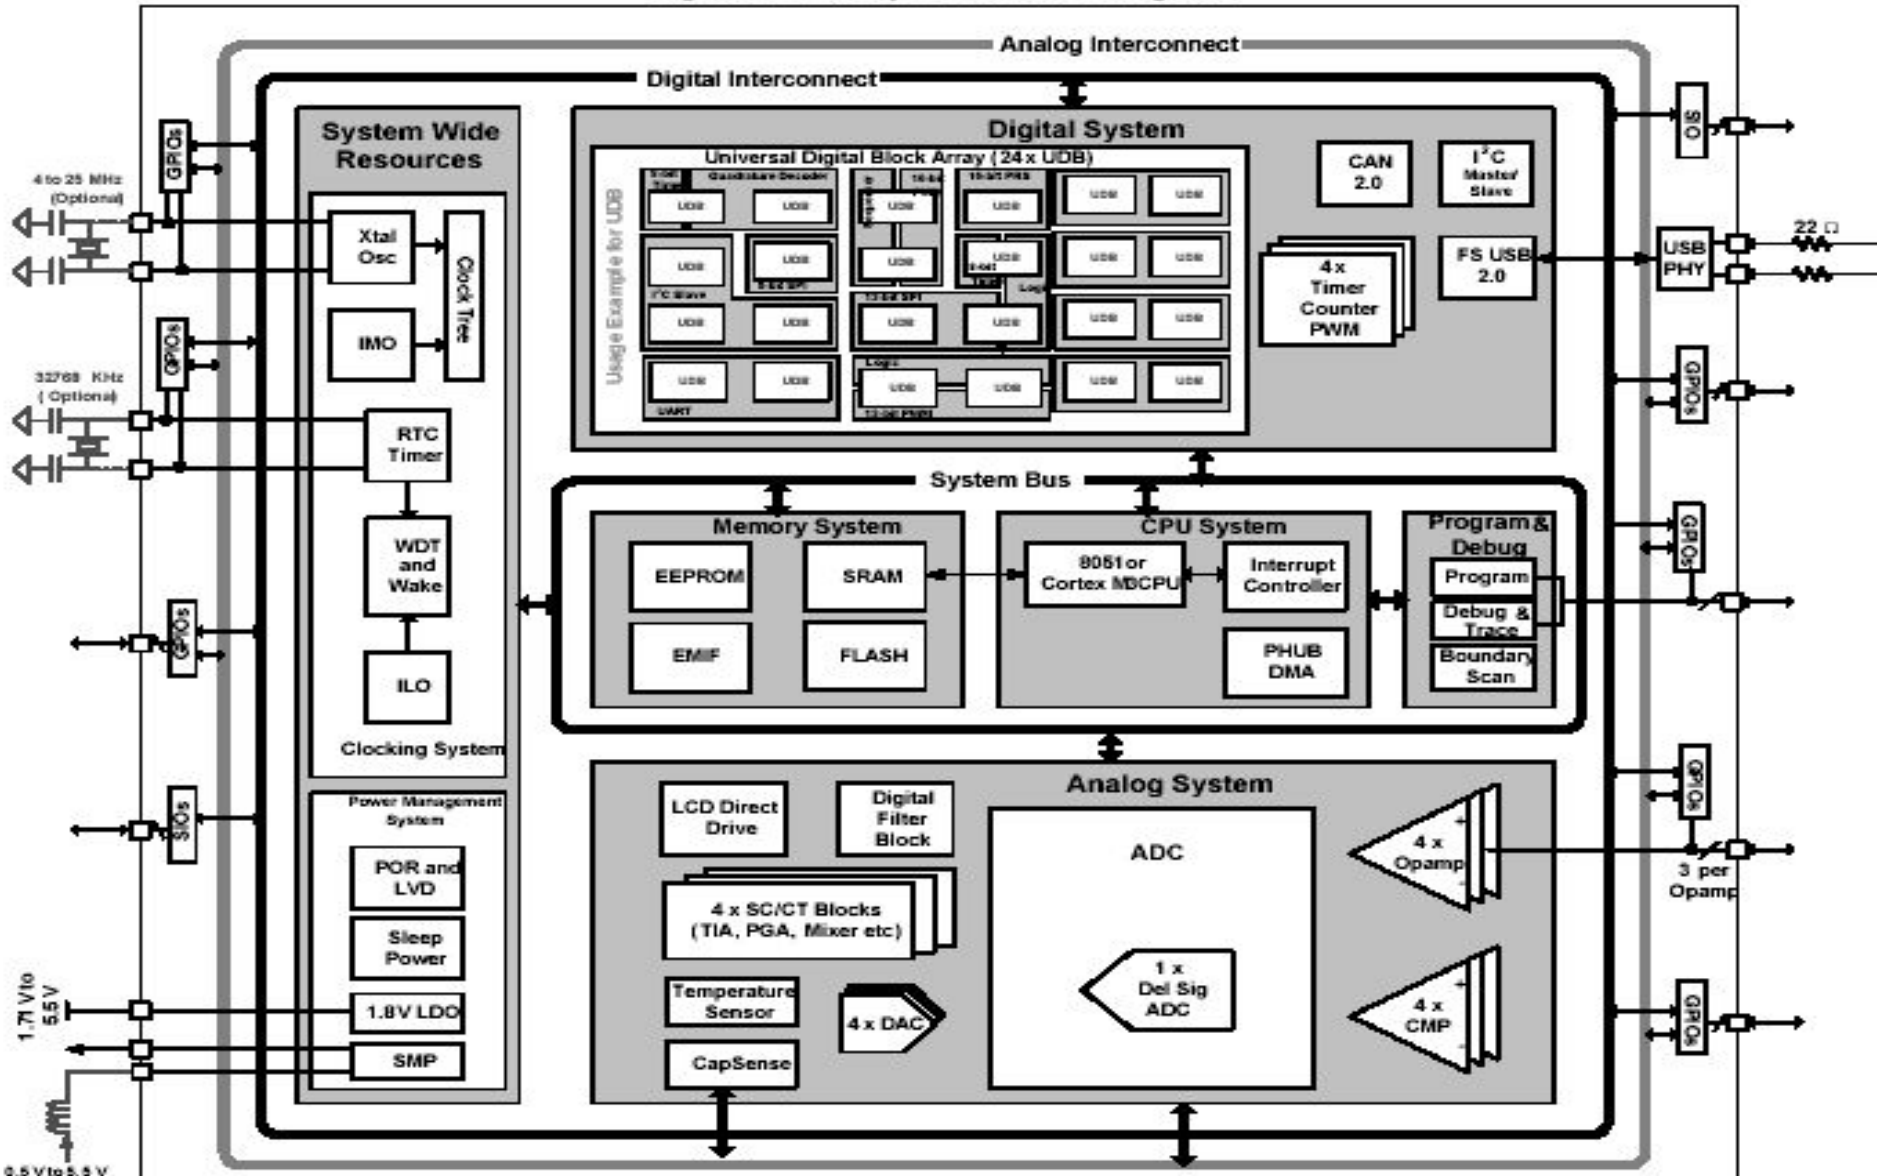

Figure 7-3. Component Catalog

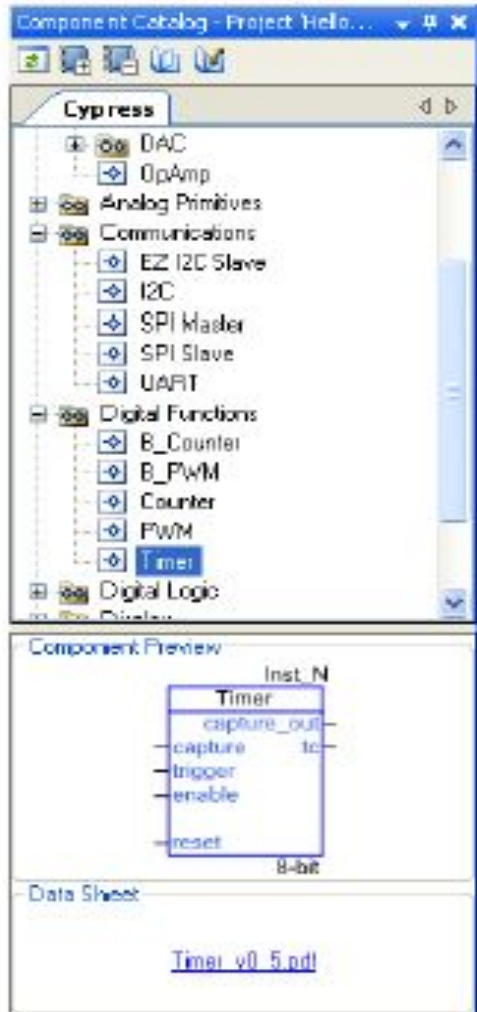

Figure 7-21. Timer/Counter/PWM

PWMs, Timers and Counters share many capabilities but each provides specific capabilities.

When to Use a PWM

The most common use of the **PWM** is to generate periodic waveforms with adjustable duty cycles. The PWM also provides optimized features for power control, motor control, switching regulators and lighting control. The PWM can also be used as a clock divider by driving a clock into the clock input and using the terminal count or a PWM output as the divided clock output.

When to Use a Counter

A **Counter** component is better used in situations that require the counting of a number of events but also provides rising edge capture input as well as a compare output.

When to Use a Timer

A **Timer** component is better used in situations focused on timing the length of events, measuring the interval of multiple rising and/or falling edges, or for multiple capture events.

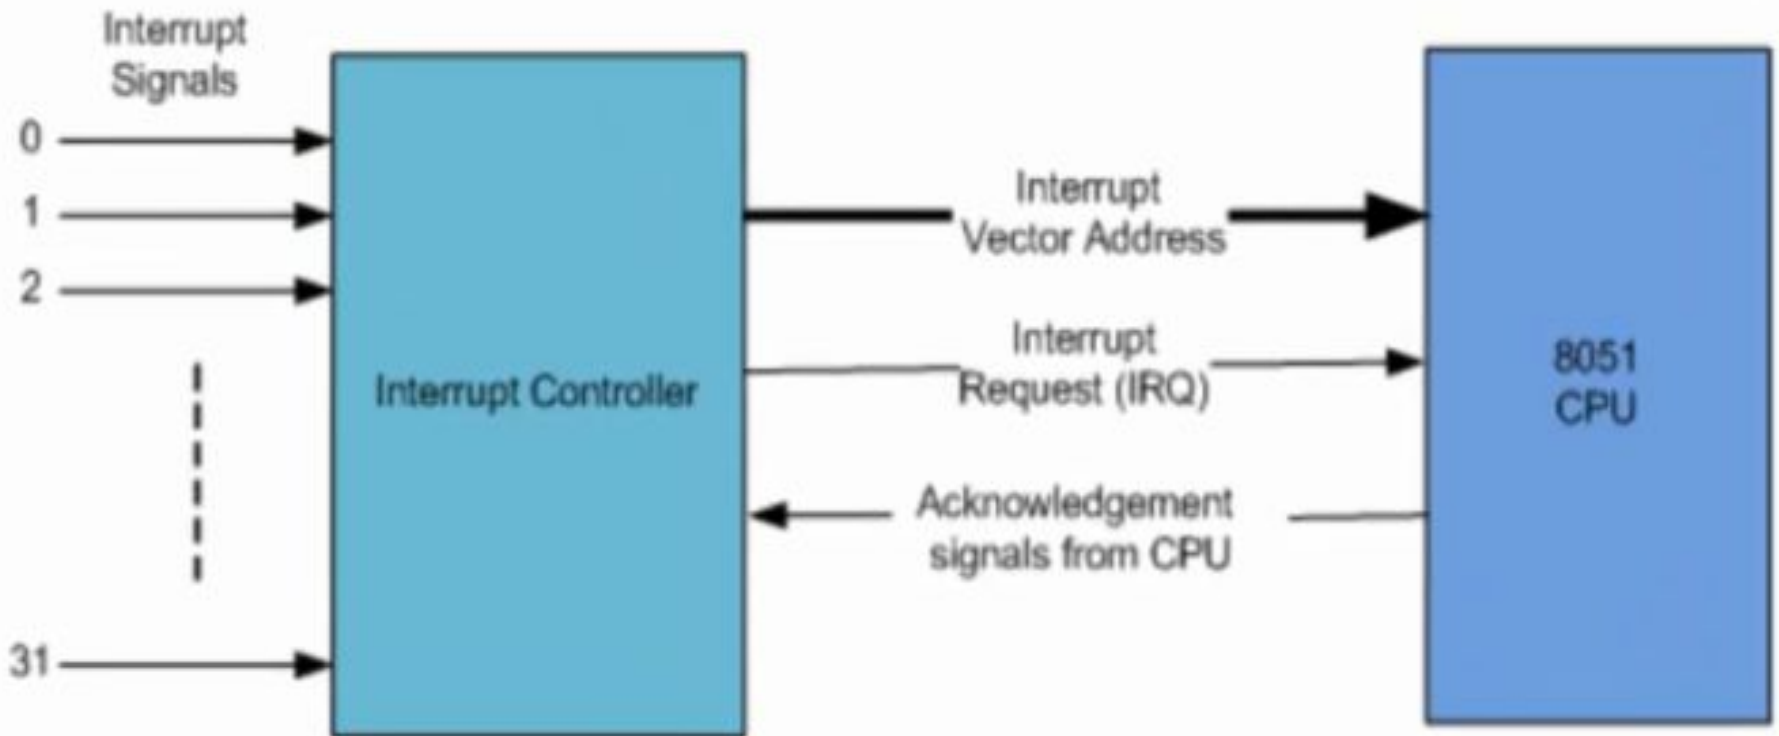

PWM

Output	May Be Hidden	Description
tc	N	The terminal count output is '1' when the period counter is equal to zero. In normal operation this output will be '1' for a single cycle where the counter is reloaded with period. If the PWM is stopped with the period counter equal to zero then this signal will remain high until the period counter is no longer zero. This output is synchronized to the block clock input of the component.
interrupt	Y	The interrupt output is the logical OR of the group of possible interrupt sources. This signal will go high while any of the enabled interrupt sources are true. The interrupt output shall remain asserted until the Status Register is read out by the software. In order to receive subsequent interrupts, the interrupt shall be cleared by reading the Status Register using the PWM_ReadStatusRegister() API. The interrupt output is not visible if the Use Interrupt parameter is not set. This allows the status register to be removed for resource optimization as necessary.
pwm/pwm1	Y	The pwm or pwm1 output is the first or only pulse width modulated output. This signal is defined by PWM Mode, compare modes(s), and compare value(s) as indicated in waveforms in the Configure dialog. When the instance is configured in one output, Dual Edged, Hardware Select, Center Aligned, or Dither PWM Modes, then the output "pwm" is visible. Otherwise the output "pwm1" is visible with "pwm2" the other pulse width signal. This output is synchronized to the block clock input of the component.

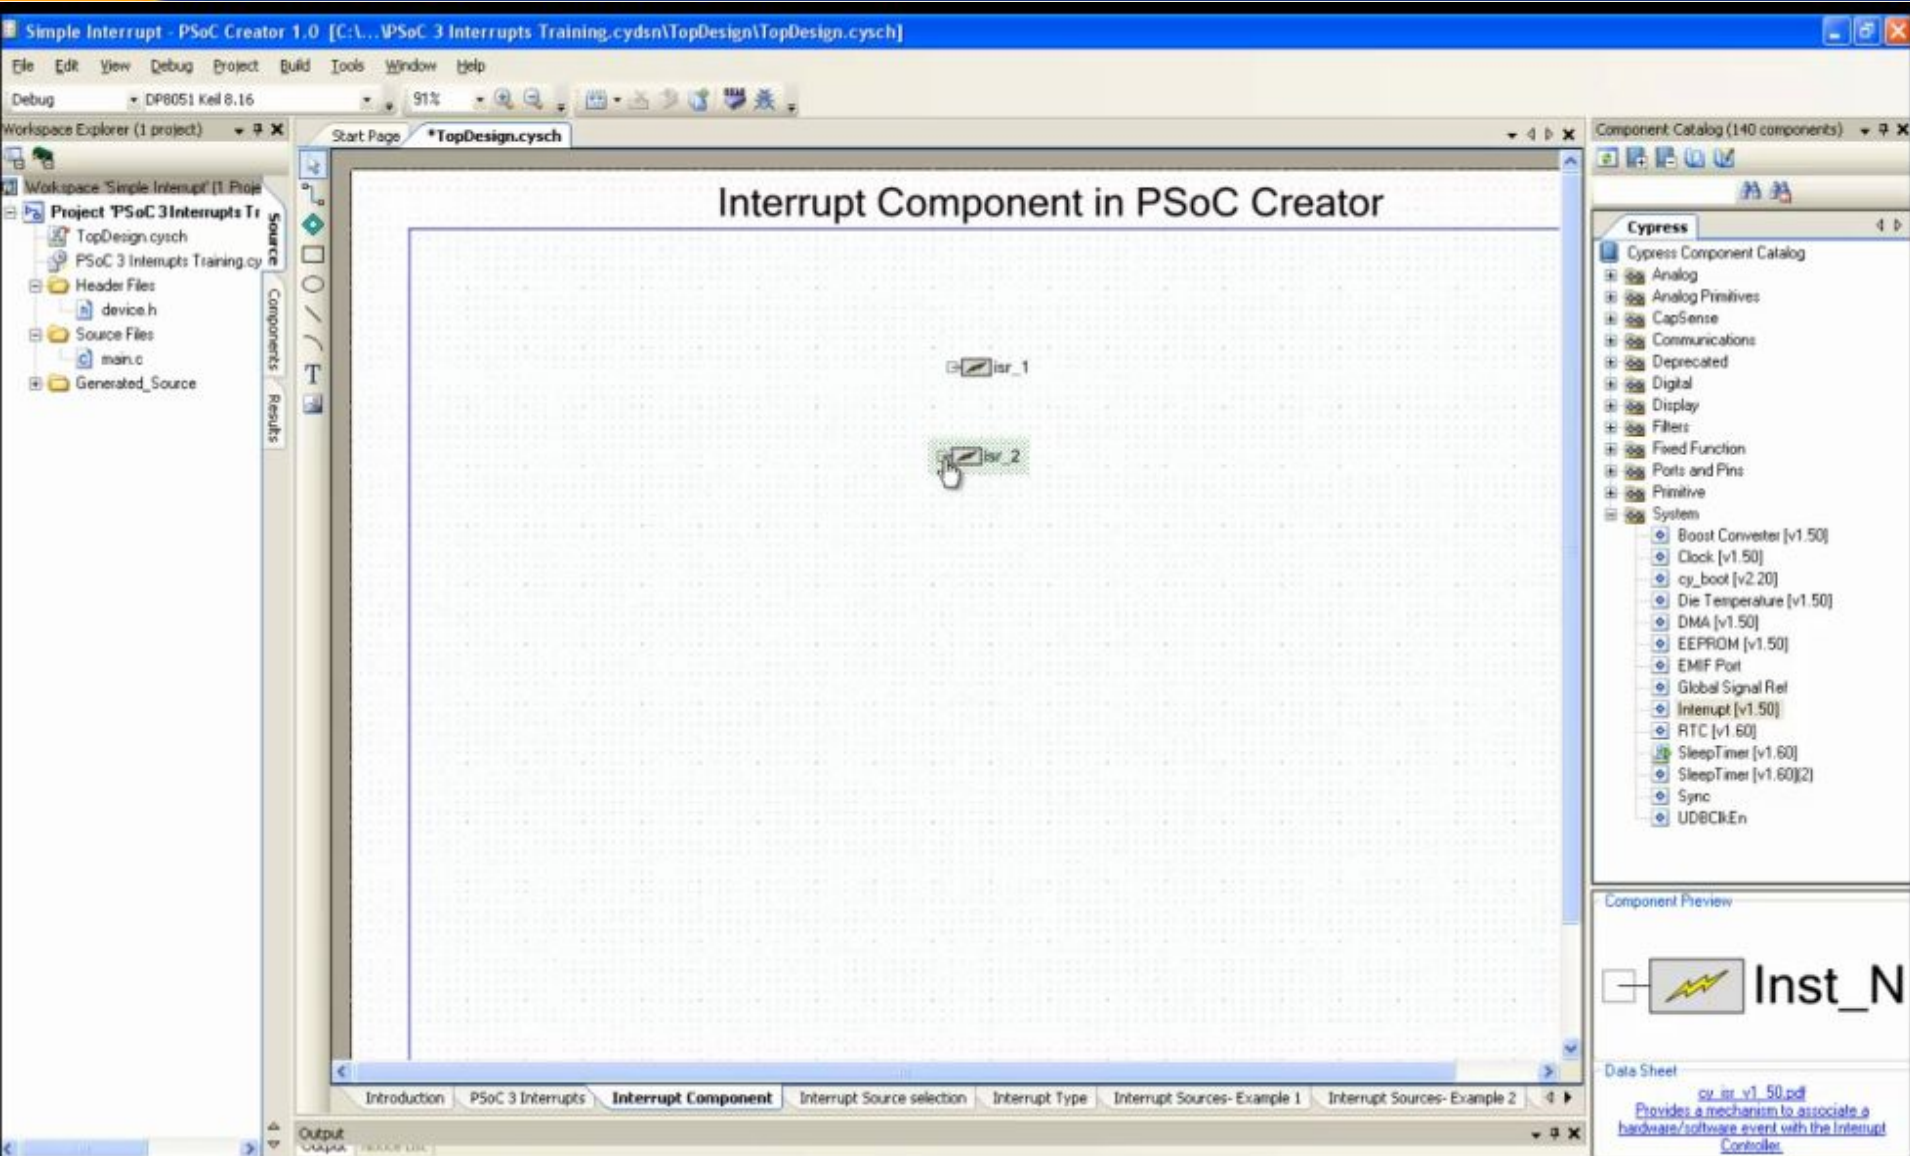

Interrupts

PSoC 3

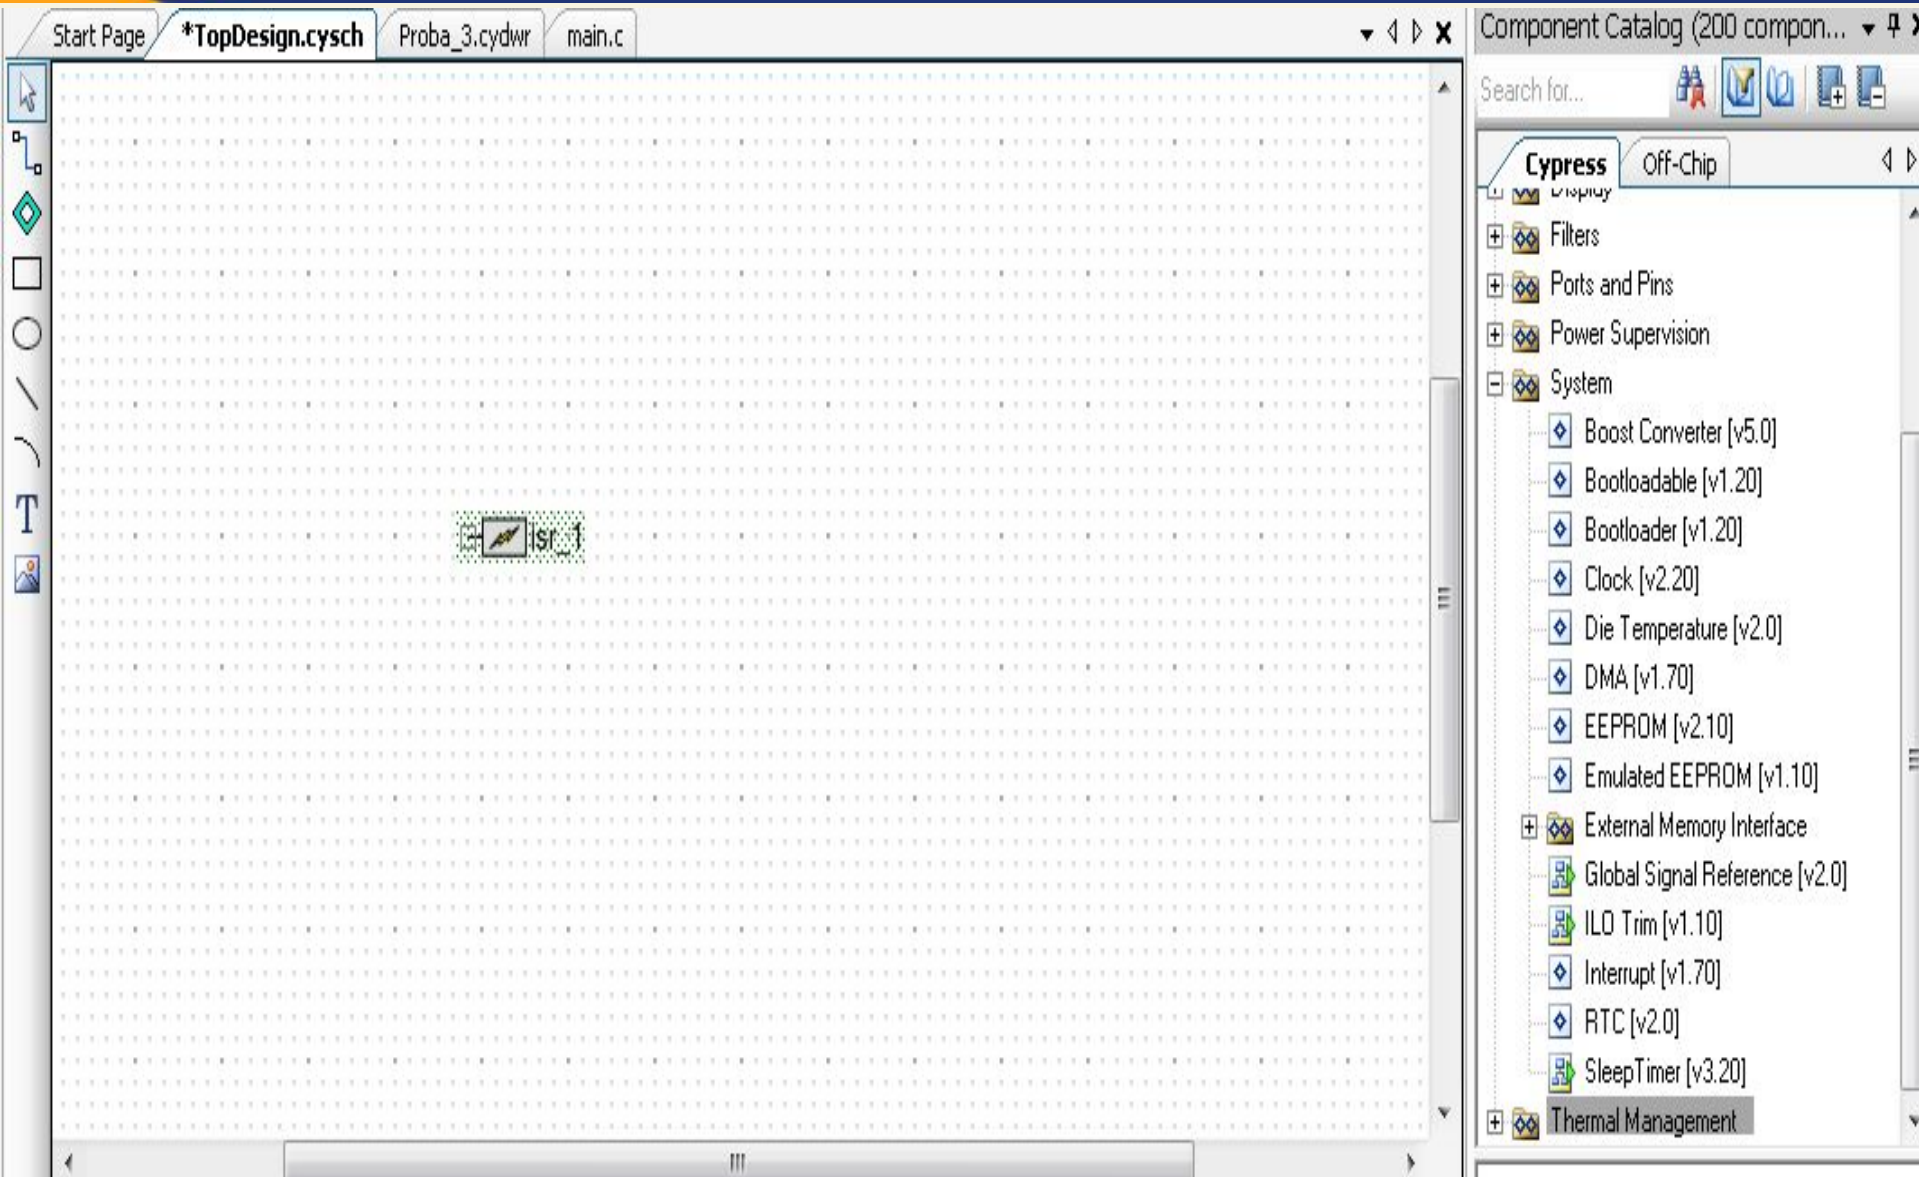

Interrupts

The screenshot displays the PSoC Creator IDE interface. The main workspace shows a schematic titled "Interrupt Component in PSoC Creator" with two interrupt components labeled "isr_1" and "isr_2". The "Component Catalog" on the right lists various components, including "Interrupt [v1.50]". The "Component Preview" section shows a component icon labeled "Inst_N". The "Data Sheet" section provides a link to the component's data sheet: [cy_isr_v1_50.pdf](#) and a description: "Provides a mechanism to associate a hardware/software event with the Interrupt Controller".

Interrupt Sources

Interrupt Sources

Interrupt Sources

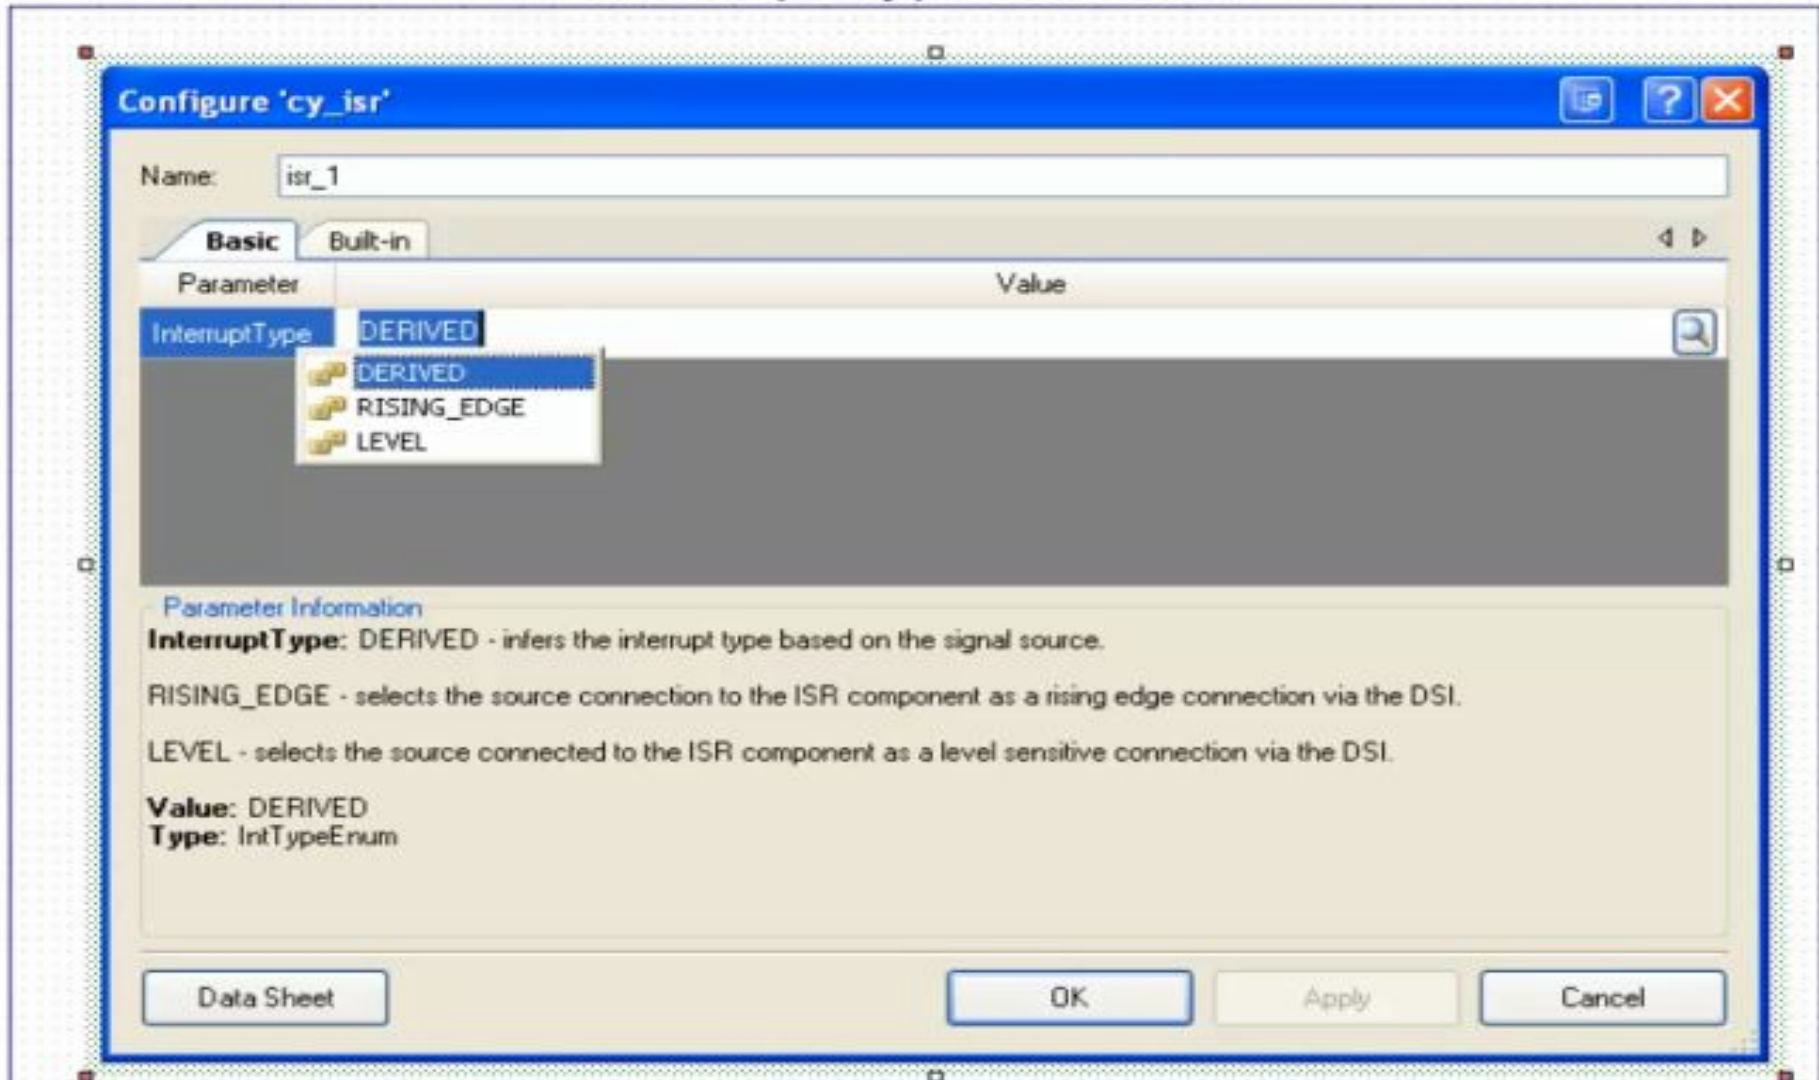

Interrupt Request Source (IRQ) Type	Examples
Fixed function IRQ's	ADC End of Conversion (EoC), Fixed Function Timer, Counter Interrupts, Port Interrupt Control Unit (PICU), Sleep Timer, Low Voltage Detect (LVD)
Universal Digital Block (UDB) array IRQ's	Any digital output signal on chip, UART, SPI component interrupts, UDB based Timer, Counter, PWM interrupts, Fixed function IRQ's can also be UDB IRQ's
Direct Memory Access (DMA) NRQ's	DMA channel Transfer complete (NRQ) signals

Interrupt Sources

Interrupt Type selection

The screenshot shows a software configuration window titled "Configure 'cy_isr'". The window has a blue title bar with standard window controls (minimize, maximize, close). Below the title bar, there is a text field for "Name:" containing the text "isr_1".

There are two tabs: "Basic" (selected) and "Built-in". Below the tabs is a table with two columns: "Parameter" and "Value".

Parameter	Value
InterruptType	DERIVED

A dropdown menu is open for the "InterruptType" parameter, showing three options: "DERIVED" (selected), "RISING_EDGE", and "LEVEL". Each option has a small icon to its left.

Below the table is a section titled "Parameter Information".

InterruptType: DERIVED - infers the interrupt type based on the signal source.
RISING_EDGE - selects the source connection to the ISR component as a rising edge connection via the DSI.
LEVEL - selects the source connected to the ISR component as a level sensitive connection via the DSI.

Value: DERIVED
Type: IntTypeEnum

At the bottom of the dialog, there are four buttons: "Data Sheet", "OK", "Apply", and "Cancel".

File – New - Projekt

The screenshot displays the PSoC Creator 2.1 application window. The main menu bar includes File, Edit, View, Debug, Project, Build, Tools, Window, and Help. The toolbar contains various icons for file operations and project management. The 'New Project' dialog box is open, showing the 'Design' tab. It lists several project templates under three categories: 'Empty Templates', 'PSoC 3 Starter Designs', and 'PSoC 5 Starter Designs'. The 'Name' field is set to 'Lab_1' and the 'Location' field is set to 'D:\PSoC_3'. The 'Advanced' section is expanded. The 'Notice List' on the left shows 0 errors and 0 warnings. The status bar at the bottom indicates 'Ready' and shows 0 errors, 0 warnings, and 0 notes.

Empty PSoC 3 Design

The screenshot displays the PSoC Creator 2.1 interface. The main window is titled "New Project" and is divided into several sections:

- Design** (selected tab) and **Other** tabs.
- Empty Templates**: A list of project templates. "Empty PSoC 3 Design" is selected and highlighted in blue. Other templates include "Empty PSoC 5 Design" and "Empty PSoC 5LP Design".
- PSoC 3 Starter Designs**: A list of starter designs for PSoC 3, including "ADC_DMA_VDAC", "DelSig_16Channel", "DelSig_I2CM", "DelSig_I2CS", "DelSig_SPIM", and "Filter_ADC_VDAC".
- PSoC 5 Starter Designs**: A list of starter designs for PSoC 5, including "ADC_DMA_VDAC", "DelSig_I2CM", and "DelSig_I2CS".
- Description**: A text box stating "Creates a PSoC 3, 8 bit, design project."
- Form Fields**:
 - Name:** Lab_1
 - Location:** D:\PSoC_3
- Buttons**: "OK" and "Cancel" buttons at the bottom right.

The background shows the PSoC Creator 2.1 main window with a menu bar (File, Edit, View, Debug, Project, Build, Tools, Window, Help) and a toolbar. A "Notice List" window is visible in the bottom left corner, showing "0 Errors" and "0 Warnings". The Windows taskbar at the bottom shows the system tray with "0 Errors", "0 Warnings", and "0 Notes", and the time "19:05".

[Character LCD Component](#)

Configure LCD

The screenshot shows the PSoC Creator 2.1 software interface. The main window displays the 'Configure CharLCD' dialog box for a component named 'LCD_Char'. The dialog has two tabs: 'General' and 'Built-in'. Under the 'General' tab, there are two sections: 'Parameters' and 'Custom Character Editor'. In the 'Parameters' section, the 'LCD Custom Character Set' is set to 'None'. Other options include 'Vertical Bargraph', 'Horizontal Bargraph', and 'User Defined'. The 'Include ASCII to Number Conversion Routines' checkbox is checked. The 'Custom Character Editor' section contains a grid for defining characters. At the bottom of the dialog are buttons for 'Datasheet', 'OK', 'Apply', and 'Cancel'. The background shows the workspace explorer with a project named 'Project Lab_1' and a component catalog on the right side listing various components like ADC, DAC, and Display. A 'Notice List' window is open in the bottom left corner, showing 0 errors and 0 warnings. The output window at the bottom shows a log message: 'Log file for this session is located at: C:\Documents and Settings\Admin...'. The status bar at the bottom indicates 'Ready' and shows the coordinates {X=295,Y=131}.

PSoC Mixed-Signal Array	AN2267a - Standard - Single Cell Li-Ion Battery Charger using CY8C21xxx	Apr 19, 2005	AN2267A.PDF AN2267A.ZIP
PSoC Mixed-Signal Array	AN2260 - Standard - Rapid NiCd/NiMH Battery Charger and DC Brushed Motor Controller for Autonomous Appliances	Apr 15, 2005	AN2260.PDF AN2260.ZIP
PSoC Mixed-Signal Array	AN2026b - Support - In-System Serial Programming Protocol CY8C24794 and CY8C29xxx	Apr 8, 2005	AN2026B.PDF
PSoC Mixed-Signal Array	AN2266 - Support - 16-Bit PWM/PWM-DACs using One Digital PSoC(TM) Block	Apr 8, 2005	AN2266.PDF AN2266.ZIP
PSoC Mixed-Signal Array	AN2279 - Support - Dynamic I2C Addressing Implemented with I2C Hardware User Modules	Apr 8, 2005	AN2279.PDF AN2279.ZIP
PSoC Mixed-Signal Array	AN2267 - Standard - Single Cell Li-Ion Battery Charger	Apr 1, 2005	AN2267.PDF AN2267.ZIP
PSoC Mixed-Signal Array	AN2222a - Support - Flex-Pod Soldering Guide	Mar 31, 2005	AN2222A.PDF
PSoC Mixed-Signal Array	AN2233a - Support - Capacitive Switch Scan	Mar 31, 2005	AN2233A.PDF
PSoC Mixed-Signal Array	AN2276 - Support - Binary Weighted Single-Pole IIR Low-Pass Filters	Mar 29, 2005	AN2276.PDF AN2276.ZIP
PSoC Mixed-Signal Array	AN2277 - Support - Capacitive Front Panel Display Demonstration	Mar 29, 2005	AN2277.PDF AN2277.ZIP
