

# Google Glass

# What is it?

---

- Google Glass — is clever glasses which will show you that you want to see. They are capable to display information from the display of your smartphone. But you shouldn't worry too in this respect, first their cost makes a round sum, and secondly the Google company declared that stops their sale.

# Functions

---

- These are glasses with the projective screen, the built-in camera capable to write down both a photo, and video, with recognition of a voice and transferring music.

# Design

---

- Google Glass very graceful and compact. In appearance they are similar to usual glasses, but over the right lens there is a special mechanism which performs work of a projector of images.
