

“Image Capture”

In 1902, the German physicist Arthur Korn conceived the technology of photoelectric scanning, which was later called the telefax.

The first real movie camera was made in 1891 by the Scotsman William Dickson: he used a gear mechanism consisting of a cogwheel to move the film and suggested making a perforation in the film.

The first experimental photo camera based on photoelectric conversion was created in 1975 by Eastman Kodak engineer Stephen Sasson.

skynner species:

drum

tablet scanner

manual skynner

planetary

3d

Compact cameras are divided into three groups:

Automatic digital cameras

professional cameras

Advanced Cameras

SLR Cameras:

SLR cameras provide full control of all shooting options

Types of camcorders:

ИТОГ:

- There are about 7 types of scanners
- There are about 4 types of digital cameras
- 3 types of video cameras (But the household group has a large number, which can be divided into many subgroups)

Thanks for attention!
