- Setup *Archer2_INI.csv* File for Wi-Fi & BT Tests
- OS & Firmware Update Instructions
- Update Serial Number
- Desktop Test Suite Diagnostics

Setup Archer2_INI.csv File for Wi-Fi & BT Tests

Set Wireless Test Configuration

You must enter both the name of your Wi-Fi access point and the name of your Bluetooth test device in the **Archer2_INI.csv** file *before* the **Archer2_Test_Suite.exe** can test Wi-Fi and Bluetooth.

NOTE: Your Wi-Fi access point should be **OPEN** (no password) with no connection to the Internet (for security). *If you use a PW, you will have to manually connect each Archer to the network prior to running the Archer2_Test_Suite.exe.*

1. Insert Archer 2 Test USB drive into your PC.
2. Go into the AR2 Test Suite v*.** folder on the USB drive.
3. Open the **Archer2_INI.csv** file in Excel.
4. Enter the name of your Wi-Fi access point in cell B1 and the name of your BT Test device in cell B2.
5. Save your changes.

	A	B	C	D	E	F

Set up Power Supply for Preliminary Inspection

Test Instructions

1. Attach one banana jack test lead to the positive (red) terminal on the power supply.
2. Attach the other end of this lead to the $V \Omega Cap$ input of the meter.
3. Attach one banana jack test lead to the negative (black) terminal on the power supply.
4. Attach the other end of this lead to the *Common* input of the meter.
5. Turn the meter dial to the VDC setting.
6. Turn on power supply.
7. Set power supply to 3.65 +/- .5 volts.
8. Remove the banana jack lead from the power supply positive terminal and meter.

Install Battery Emulator – Preliminary Inspection All Models

Test Instructions

1. Attach AR2 emulator to power supply and ammeter as follows:
 - Red plug on emulator to positive terminal of power supply
 - Black plug on emulator to 10A input of ammeter
 - Banana jack test lead from COM input of ammeter to negative terminal of power supply (should still be there from voltage setting)
 - Set ammeter to the A/mA setting
2. Remove battery door from Unit Under Test (UUT).
3. Attach emulator to UUT with the red wire on the emulator UP (toward the top of the handheld).
4. Secure the emulator with the test door, ~~torquing two diagonal screws to 2 in/lbs.~~

Install Battery Emulator – All Models

Test Instructions

1. Attach AR2 emulator to power supply and ammeter as follows:
 - Red plug on emulator to positive terminal of power supply
 - Black plug on emulator to 10A input of ammeter
 - Banana jack test lead from COM input of ammeter to negative terminal of power supply (should still be there from voltage setting)
 - Set ammeter to the A/mA setting
2. Remove battery door from Unit Under Test (UUT).
3. Attach emulator to UUT with the red wire on the emulator UP (toward the top of the handheld).
4. Secure the emulator with the test door, torquing the two screws to 2 in/lbs.

Preliminary Std, G, & GC Test - Check Current Levels

Test Instructions

1. Press the *Max* button on the ammeter twice. The display will read *Max*. This will allow the meter to record the highest current value that is input. *If DMM does not have **Max** function, observe display closely during the following tests.*
2. Turn on the UUT.
3. Ensure the *Boot Up* current does not exceed **775mA**.
4. Turn ammeter to *Off* and then back to *A/mA*.
5. See if the UUT is running any applications such as Wi-Fi, Bluetooth, etc. If so, turn them off.
6. Ensure the *Idle* current does not exceed **300 mA**.
7. Suspend the UUT.
8. Ensure the *Suspend* current does not exceed **85 mA**.
9. Press ESC to return to Preliminary Test.

Preliminary GB & GBC Test - Check Current Levels

Test Instructions

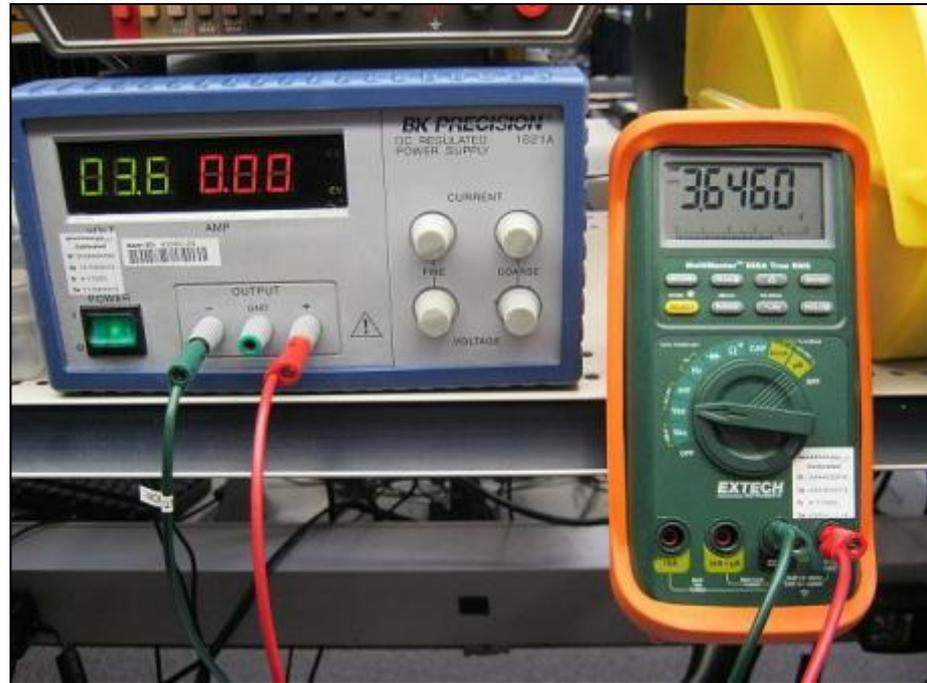

1. Press the *Max* button on the ammeter twice. The display will read *Max*. This will allow the meter to record the highest current value that is input. *If DMM does not have **Max** function, observe display closely during the following tests.*
2. Turn on the UUT.
3. Ensure the *Boot Up* current does not exceed **900mA**.
4. Turn ammeter to *Off* and then back to *A/mA*.
5. See if the UUT is running any applications such as Wi-Fi, Bluetooth, Barcode, etc. If so, turn them off.
6. Ensure the *Idle* current does not exceed **385 mA**.
7. Suspend the UUT.
8. Ensure the *Suspend* current does not exceed **85 mA**.
9. Press **ESC** to return to Preliminary Test.

RMA Test - Set up Power Supply

Test Instructions

1. Attach one banana jack test lead to the positive (red) terminal on the power supply.
2. Attach the other end of this lead to the $V \Omega Cap$ input of the meter.
3. Attach one banana jack test lead to the negative (black) terminal on the power supply.
4. Attach the other end of this lead to the *Common* input of the meter.
5. Turn the meter dial to the VDC setting.
6. Turn on power supply.
7. Set power supply to 3.65 +/- .5 volts.
8. Remove the banana jack lead from the power supply positive terminal and meter.

Install Battery Emulator – Std & Geo

Test Instructions

1. Attach AR2 emulator to power supply and ammeter as follows:
 - Red plug on emulator to positive terminal of power supply
 - Black plug on emulator to 10A input of ammeter
 - Banana jack test lead from COM input of ammeter to negative terminal of power supply (should still be there from voltage setting)
 - Set ammeter to the *A/mA* setting
2. Remove battery door from Unit Under Test (UUT).
3. Attach emulator to UUT with the red wire on the emulator UP (toward the top of the handheld).
4. Secure the emulator with the test door, ~~torquing the two screws to 2 in/lbs.~~

Std, G, & GC RMA Test - Check Current Levels

Test Instructions

1. Press the *Max* button on the ammeter twice. The display will read *Max*. This will allow the meter to record the highest current value that is input. *If DMM does not have **Max** function, observe display closely during the following tests.*
2. Turn on the UUT.
3. Ensure the *Boot Up* current does not exceed **775mA**.
4. Turn ammeter to *Off* and then back to *A/mA*.
5. See if the UUT is running any applications such as Wi-Fi, Bluetooth, etc. If so, turn them off.
6. Ensure the *Idle* current does not exceed **300 mA**.
7. Suspend the UUT.
8. Ensure the *Suspend* current does not exceed **85 mA**.
9. Remove battery emulator for RMA Test.

GB & GBC RMA Test - Check Current Levels

Test Instructions

1. Press the *Max* button on the ammeter twice. The display will read *Max*. This will allow the meter to record the highest current value that is input. *If DMM does not have Max function, observe display closely during the following tests.*
2. Turn on the UUT.
3. Ensure the *Boot Up* current does not exceed **900mA**.
4. Turn ammeter to *Off* and then back to *A/mA*.
5. See if the UUT is running any applications such as Wi-Fi, Bluetooth, Barcode, etc. If so, turn them off.
6. Ensure the *Idle* current does not exceed **385 mA**.
7. Suspend the UUT.
8. Ensure the *Suspend* current does not exceed **85 mA**.
9. Remove battery emulator for RMA Test.

Install Battery Emulator & SIM Card – GC & GCB

Test Instructions

1. Attach AR2 emulator to power supply and ammeter as follows:
 - Red plug on emulator to positive terminal of power supply
 - Black plug on emulator to 10A input of ammeter
 - Banana jack test lead from COM input of ammeter to negative terminal of power supply (should still be there from voltage setting)
 - Set ammeter to the *A/mA* setting
2. Remove battery door from Unit Under Test (UUT).
3. Install SIM card.
4. Attach emulator to UUT with the red wire on the emulator UP (toward the top of the handheld).
5. Secure the emulator with the test door, torquing the two screws to 2 in/lbs.

Test Suite, OS, Bootloader, & Firmware Versions

AR2_AG2 Test Suite Version:

- Version 2.1

To check OS etc.: Tap Settings > System > System Information > System ID.

- OS Build Version: 1.6.3
- OS Build Number: 15266

- Bootloader Version: 1.6.3

- Touchscreen Firmware Versions: 306a (Finger), 301a (Stylus), or 300w (Water). OS 1.5.2 or above is required for this firmware.

- GNSS Firmware versions by Board Version:
 - Board version 0.4.4.1: GPS Firmware 01.91 or 02.06
 - Board version 0.4.5.1 through 0.4.6.1: GPS Firmware 03.05

NOTE: GPS firmware cannot be updated. It is tied to PCBA version.

Std, G, & GC Preliminary Inspection

- **Visually inspect unit** for obvious damage or wear (scratched or cracked touch screen or LCD, cracked or dented case, worn or damaged keyboard elastomer, damaged I/O connectors, etc.).
- **Setup Power Supply** - Click on link to: Setup power supply, install battery emulator, and check currents.
DC volts: 3.65V +/- .5
Current limit: 2 Amps
- **Install battery emulator.** Turn on UUT and check currents:
Boot Current – less than **775 mA**
Idle current – less than **300 mA** (turn off Wi-Fi, 3G Modem, Barcode, etc., if they are on.)
Suspend current – less than **85 mA**
- **Check for current OS, bootloader, and firmware versions.** (Tap *Settings* > *System* > *System Information* > *System ID*.) Make a note if they need to be updated during final test.
- **Test touch screen function.** Tap on *Start* > *Notes*. Create a new note if needed. Tap the menu and check **Draw**. Use your finger to move the slider bar up and down. Use your finger to draw an hour-glass shape that fills the screen. Draw a box around the hour-glass. Tap the menu and select **Undo Ink**.
- **Test the keys for correct “snap” and functions.** Tap on the Note menu and uncheck **Draw**. Start with the number keys, pressing each key 6 to 10 times while varying the angle with which you press the key. Follow with the ⇧ (shift) key plus - (this will give an * asterix) , the period key, the □ (Back) key, the □ (Enter) key, the □ (Tab) key, and the □ (Menu/insert date) key. Verify that the correct characters are displayed that that there are no double-entries. **Close and delete the note.** Test the **Camera** and **Home** keys last.
- **Continue on next slide**

GB & GBC Preliminary Inspection

- **Visually inspect unit** for obvious damage or wear (scratched or cracked touch screen or LCD, cracked or dented case, worn or damaged keyboard elastomer, damaged I/O connectors, etc.).
- **Setup Power Supply** - Click on link: Setup power supply, install battery emulator, and check currents.
DC volts: 3.65V +/- .5
Current limit: 2 Amps
- **Install battery emulator.** Turn on UUT and check currents:
Boot Current – less than **900 mA**
Idle current – less than **385 mA** (turn off Wi-Fi, 3G Modem, Barcode, etc., if they are on.)
Suspend current – less than **85 mA**
- **Run the *Barcode Connector* app.**
 1. Select *Barcode Setup > Test*.
 2. Aim the scanner at the Archer 2 Bar Code Test Sheet and tap *Scan*. Verify that it read the code correctly.
 3. Select *OK*.
 4. Select *Exit* (tap the **X** to close).

Note: Do not power down the barcode module

- **Check for current OS, bootloader, and firmware versions.** (Tap Settings > System > System Information > System ID.) Make a note if they need to be updated during final test.
- **Continue on next slide**

Std, G, & GC - Preliminary Inspection, continued

- **Turn on the Wi-Fi** and verify that Wi-Fi networks are available. Turn off the Wi-Fi.
- **Turn on Bluetooth.** Tap **Settings > Connections > Bluetooth > Add new device**. Verify that it discovers the Bluetooth test device. Tap **Cancel** and close Bluetooth windows.
- **Press the Camera key.** Tap Menu and turn on the flash. Take a picture and verify that the camera and flash worked.
- **Perform Bubble test.** If unit fails leak test, try to identify the source of the leak so it can be addressed during the repair. Ref: 12333-** Bubble-Test.TST.doc

• **Perform repairs, updates, final RMA test, and inspection.**

GC & GCB - Preliminary Inspection, continued

- **Test touch screen function.** Tap on Start > Notes. Create a new note if needed. Tap the menu and check “Draw”. Use your finger to move the slider bar up and down. Use your finger to draw an hour-glass shape that fills the screen. Draw a box around the hour-glass. Tap the menu and select **Undo Ink**.
- **Test the keys for correct “snap” and functions.** Tap on the Note menu and uncheck **Draw**. Start with the number keys, pressing each key 6 to 10 times while varying the angle with which you press the key. Follow with the ⇧ (shift) key plus - (this will give an * asterix) , the period key, the □ (Back) key, the □ (Enter) key, the □ (Tab) key, and the □ (Menu/insert date) key. Verify that the correct characters are displayed that that there are no double-entries. **Close and delete the note.** Test the **Camera** and **Home** keys last.
- **Turn on the Wi-Fi** and verify that Wi-Fi networks are available. Turn off the Wi-Fi.
- **Turn on Bluetooth.** Tap **Settings > Connections > Bluetooth > Add new device**. Verify that it discovers the Bluetooth test device. Tap **Cancel** and close Bluetooth windows.
- **Press the Camera key.** Tap Menu and turn on the flash. Take a picture and verify that the camera and flash worked.
- **Perform Bubble test.** If unit fails leak test, try to identify the source of the leak so it can be addressed during the repair. **Ref: 12333-** Bubble-Test.TST.doc**
- **Perform repairs, updates, final RMA test, and inspection.**

Install Wi-Fi Calibration

Test Instructions

1. Attach 12 volts external power.
2. Install *Wi-Fi Calibration* flash drive.
3. Select *Device and Install*.
4. **Do not select OK.**
5. Hold down power key long enough to get the reset menu.
6. Select *Reset*.
7. Remove the flash drive.

If *OK* is selected after the Wi-Fi calibration, the unit will need to be clean-booted.

Install Wi-Fi Calibration

Test Instructions

Perform on new PCBAs prior to burn-in.

1. Plug 12-volt external power into the unit. Allow unit to boot up.
2. Install *Wi-Fi Calibration* flash drive.
3. Select *Device* and *Install*.
4. Place the UUT on an isolating surface such as a cardboard box so that the unit is 12 inches from any device or surface that could cause interference.
5. Select *OK*.
6. Remove the flash drive.
7. Select Windows  key.
8. Swipe the display to the *Calibrate Wi-Fi* icon. Tap the icon.

Note: The icon may appear in different places with different units.

The unit will calibrate the Wi-Fi.

9. Click *OK* on the *Success* screen.

10. Remove 12-volt external power.

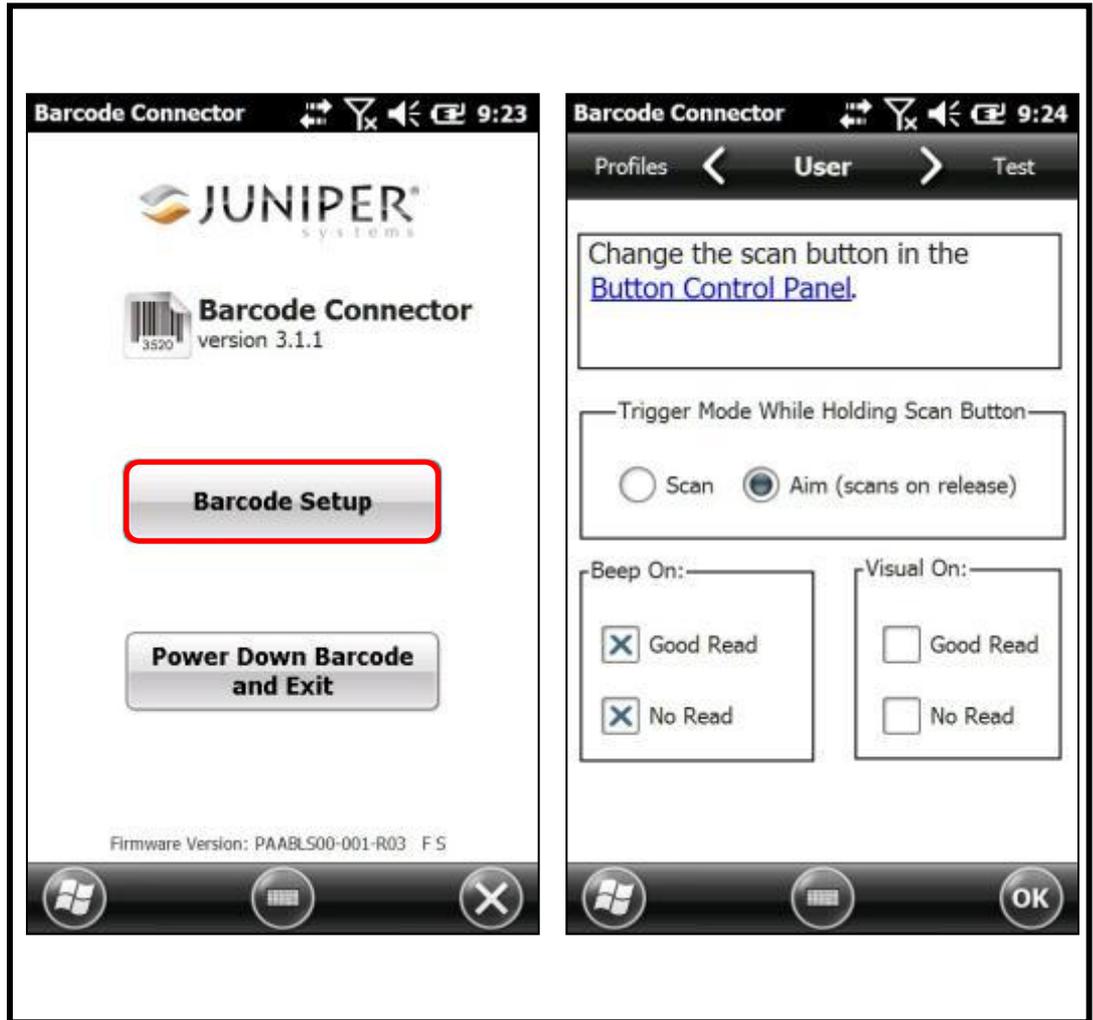

Run Barcode Setup

Test Instructions

1. When the unit restarts, the *Barcode Connector* menu will appear.
2. Select *Barcode Setup*.
3. Select *Aim*.
4. Select *OK*. 
5. Select *Exit*.

Note: Do not power down the barcode module. The barcode function will be tested during the manual tests.

The image displays two screenshots of the Barcode Connector mobile application interface.

Left Screenshot: The main menu shows the JUNIPER SYSTEMS logo, the application name "Barcode Connector version 3.1.1", and two buttons: "Barcode Setup" (highlighted with a red box) and "Power Down Barcode and Exit". The status bar at the top shows "Barcode Connector" and the time "9:23". The bottom navigation bar includes a Windows logo, a home button, and a close button (X).

Right Screenshot: The "Barcode Setup" configuration screen is shown. The status bar at the top shows "Barcode Connector" and the time "9:24". Below the status bar are navigation options: "Profiles" (left arrow), "User" (center), and "Test" (right arrow). The main content area contains the instruction: "Change the scan button in the [Button Control Panel](#)". Under "Trigger Mode While Holding Scan Button", the "Aim (scans on release)" option is selected. Under "Beep On:", both "Good Read" and "No Read" are checked. Under "Visual On:", both "Good Read" and "No Read" are unchecked. The bottom navigation bar includes a Windows logo, a home button, and an "OK" button.

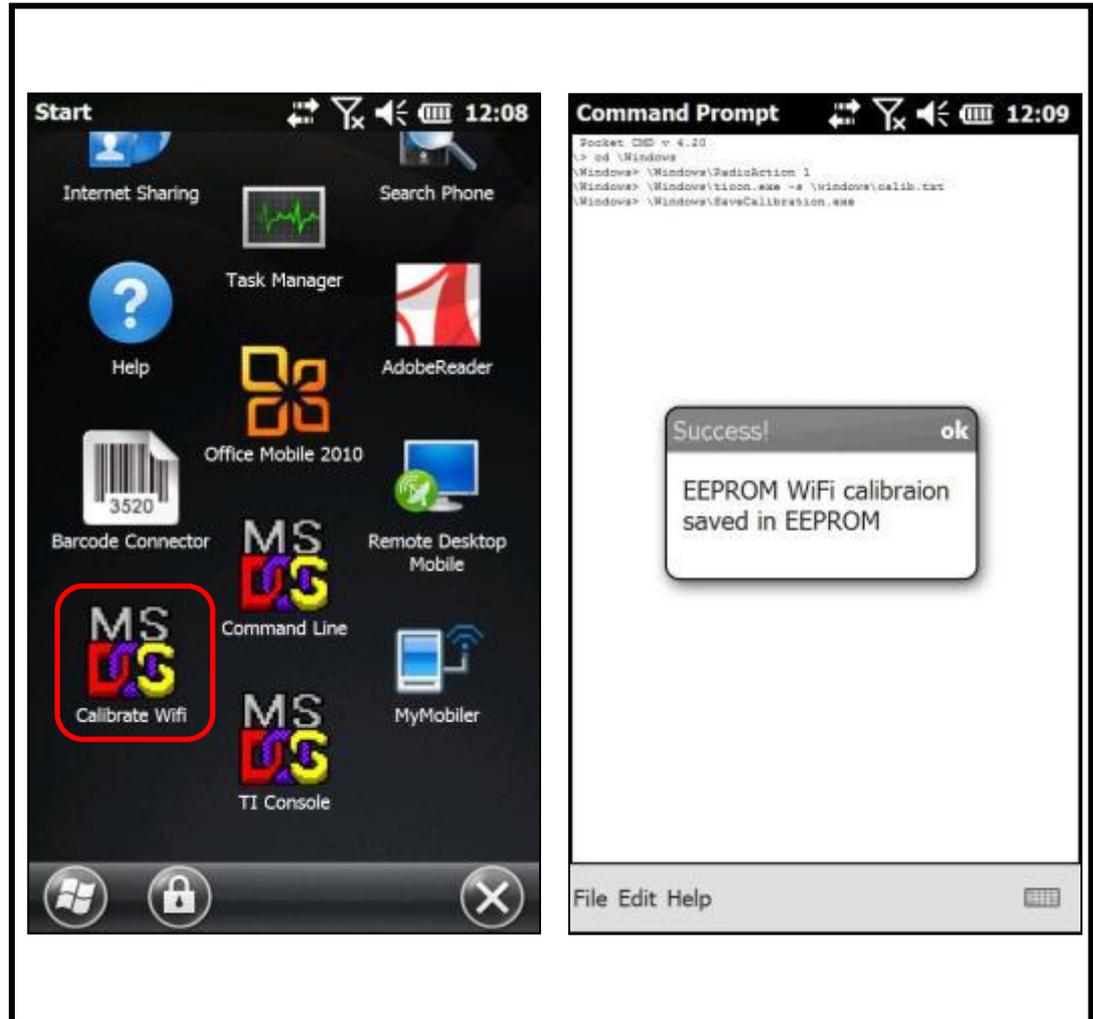

Calibrate Wi-Fi

Test Instructions

1. Select Windows  key.
2. Swipe the display to the *Calibrate Wi-Fi* icon.

Note: The icon may appear in different places with different units.

The unit will calibrate the Wi-Fi.
3. Click *OK*.

Install Test Fixtures

Test Instructions

1. Suspend the UUT.

Note: When installing the battery, ensure that the plus sign and arrow on the battery line up with similar marks on the UUT.

2. Install the following test fixtures :

- Micro SD card
- Battery (half-charged or less)
- Battery door—secure two diagonally opposite screws
- COM Loopback plug
- Test USB drive
- Audio jack

3. Plug in the micro-USB from the test computer (tablet).

4. Resume the UUT.

5. From the Home screen, turn off all the radios as applicable (GPS, Wi-Fi,

Bluetooth, cell, etc.).

Prepare Unit for Chamber

Test Instructions

1. Attach battery door using all four screws.
2. If Gore-Tex patch is not already in place, clean the area around the vent hole at the top of the unit with alcohol and a Kimwipe. Let dry.
3. Attach a Gore-Tex patch over the vent hole.

Set Date and Time

Test Instructions

1. Place the unit in the chamber.
2. Insert 12-volt external power into the unit.
3. Allow the unit to boot.
4. Set the date and time on the unit.

Update Time 9:44

Time Zone:
GMT-7 Mt. Time (US & Canada)

Date:
12 / 16 / 2013

Time:
9 : 43 : 42 AM

OK

Run Chamber Tests

Test Instructions

1. Insert the Chamber Test (v1.1) flash drive into the USB port.
2. After the tests load, select *Start*.
3. Ensure the display reads, "*Waiting for 18:05 to start tests.*"
4. Follow the instructions on the chamber to turn on and run chamber tests.

Archer2 Chamber

Burn-In **Bench**

Status:

Time: 06/01/2013 00:00:38

Check to run continuously.

Start Test Immediately.

Remove Unit from Chamber

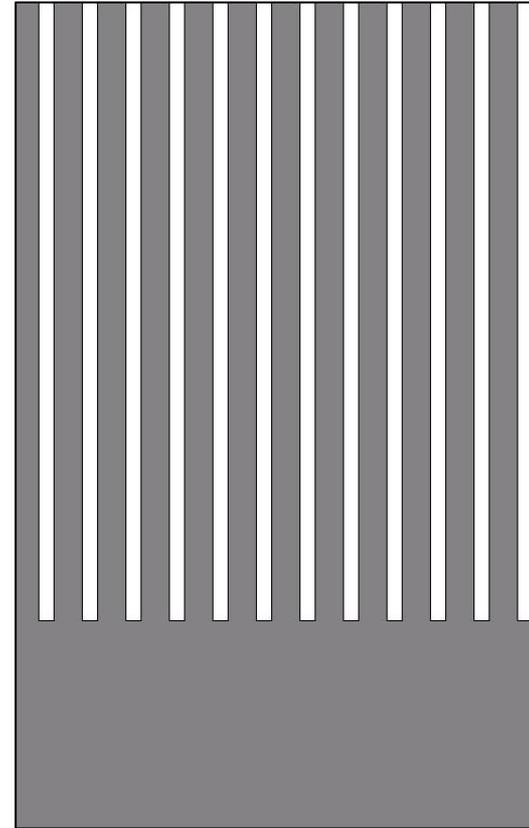

Parts List		
Qty	JSPN	Description

Assembly Instructions

DETERMINATION OF NOMINAL BENCHMARKS IS STILL IN PROCESS

1. Once the unit has successfully passed chamber testing, the screen will show the display shown at right.
2. Tap on this screen to reveal a dialog box that states that the unit has passed testing.

DETERMINATION OF NOMINAL BENCHMARKS IS STILL IN PROCESS

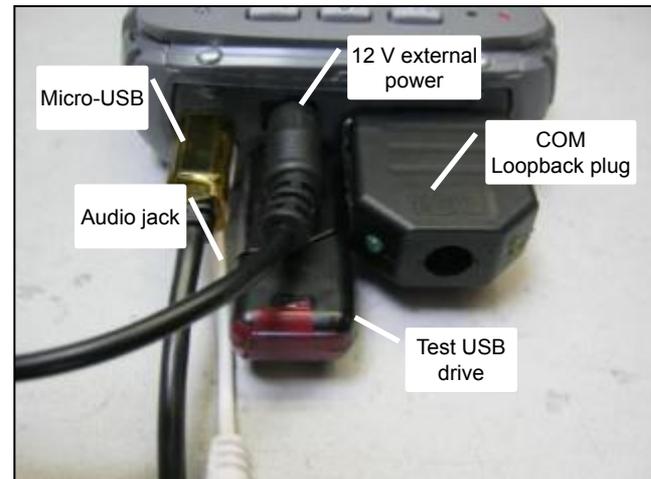

Install Test Fixtures

Test Instructions

Note: When installing the battery, ensure that the plus sign and arrow on the battery line up with similar marks on the UUT.

1. Install the following test fixtures:
 - Micro SD card
 - Battery (half-charged or less)
 - Battery door—secure two diagonally opposite screws
 - COM Loopback plug
 - Test USB drive
 - Install Audio jack
 - 12 V external power
2. Plug in the micro-USB com cable from the test computer.
3. Resume the UUT.
4. From the Home screen, turn off all the radios as applicable (GPS, Wi-Fi, Bluetooth, cell, etc.).

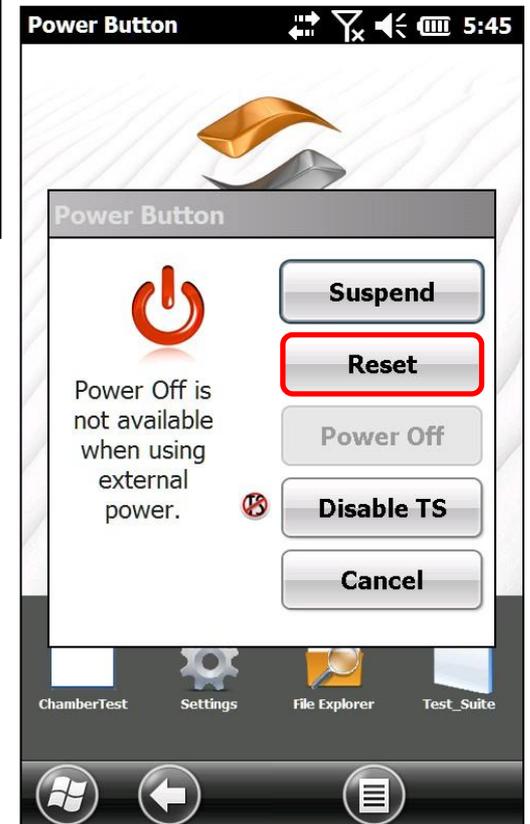

Install Wi-Fi Calibration

Test Instructions

1. Remove all test connections except external power.
2. Install *Wi-Fi Calibration* flash drive.
3. Select *Device* and *Install*.
4. **Do not select OK.**
5. Hold down power key long enough to get the reset menu.
6. Select *Reset*.
7. Remove the flash drive.

If *OK* is selected after the Wi-Fi calibration, the unit will need to be clean-booted.

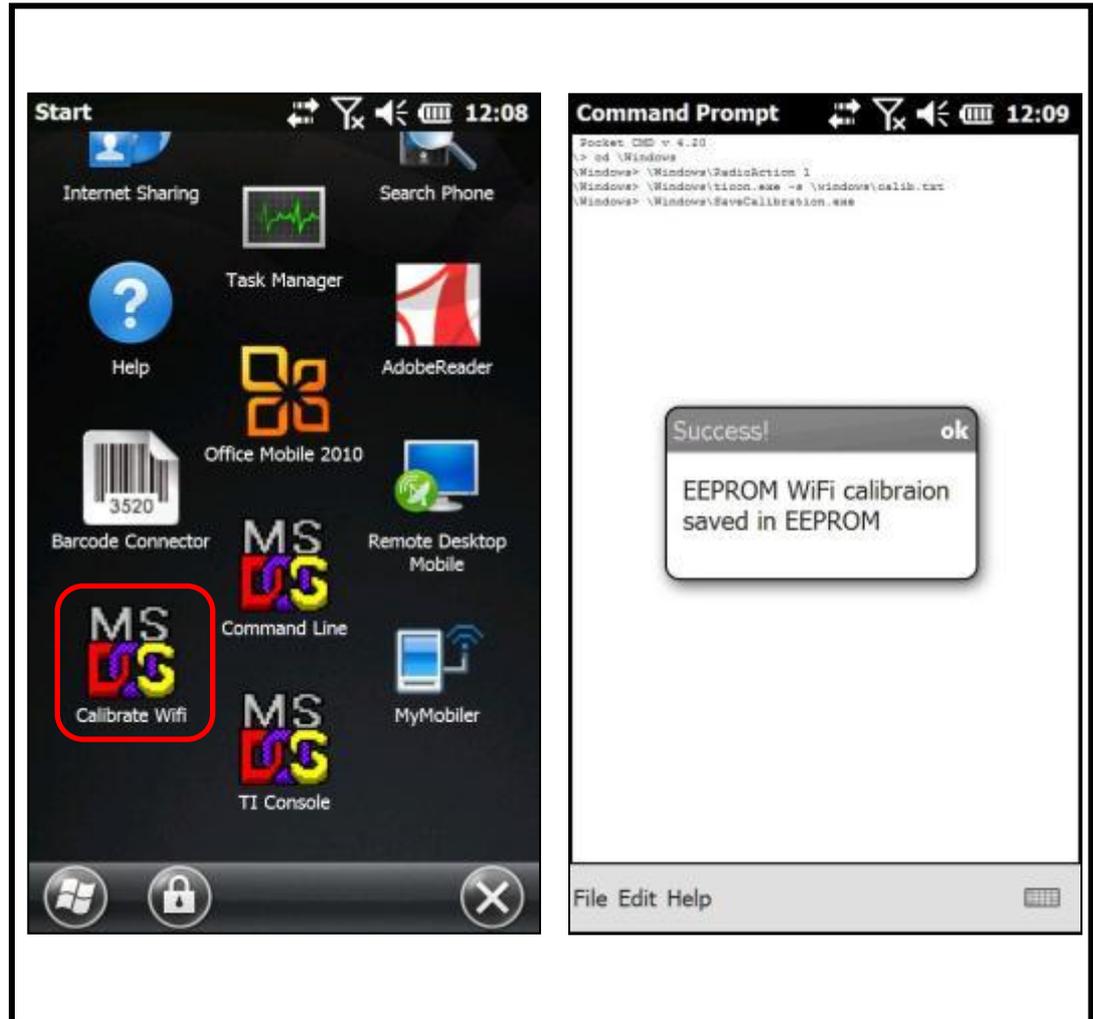

Calibrate Wi-Fi

Test Instructions

1. Select Windows  key.
2. Swipe the display to the *Calibrate Wi-Fi* icon.

Note: The icon may appear in different places with different units.

The unit will calibrate the Wi-Fi.
3. Click *OK*.

Start Test Suite on UUT

1. Install your USB Test drive. Start *File Explorer* and **copy the TestSoft folder from Hard Disk to My Device**. Go into the *TestSoft* folder and tap on **AR2_AG2_Test_Suite.exe**.
2. Select **All Tests**.
3. Verify that **Serial** number is correct. Use link to [Update SN# in the Restore tab if necessary](#).
4. Tap on the **COM Test** button and observe that both the red and green ground test LEDs briefly turn on. Observe that **"Passed"** is displayed
5. Run the following tests in turn: **SD, USB, BT, Wi-Fi, Cell** (if applicable), and **Accel**. Observe that each test shows **"Passed"** before moving to the next test.
6. **Bar Code units only:** Aim the Bar Code scanner at the **Archer 2 Bar Code Test Sheet**. Tap on **ExpPod**. Observe that **"Passed"** is displayed.
7. **Remove the USB test drive before running the LCD and Battery tests**. Observe that each test shows **"Passed"**.
8. Tap on **Audio** and follow the on-screen instructions. Observe that **"Passed"** is displayed.

Test Suite, Continued

1. Tap on the **Speaker** button and follow the on-screen instructions. Observe that **“Passed”** is displayed.
2. Tap on the **Touch** button and follow the on-screen instructions. Observe that **“Passed”** is displayed.
3. Tap on the **Keys** button and follow the on-screen instructions. Observe that **“Passed”** is displayed. If you press the wrong key, tap **Undo** and try again.
4. **Geo units only:** Tap on **Camera** > Menu > Flash > On. Tap on the **Camera** button in the Test Suite. Follow the on-screen instructions. Observe that camera flash works in each test, that pictures are clear and focused. Observe that **“Passed”** is displayed when the tests are complete.
5. **Geo units only:** Hold the UUT under a GPS repeater or take the unit outside where it has a clear view of the sky. Tap on the **GPS** button and observe that **“Passed”** is displayed. This test may take a few minutes as GPS creates a satellite almanac.

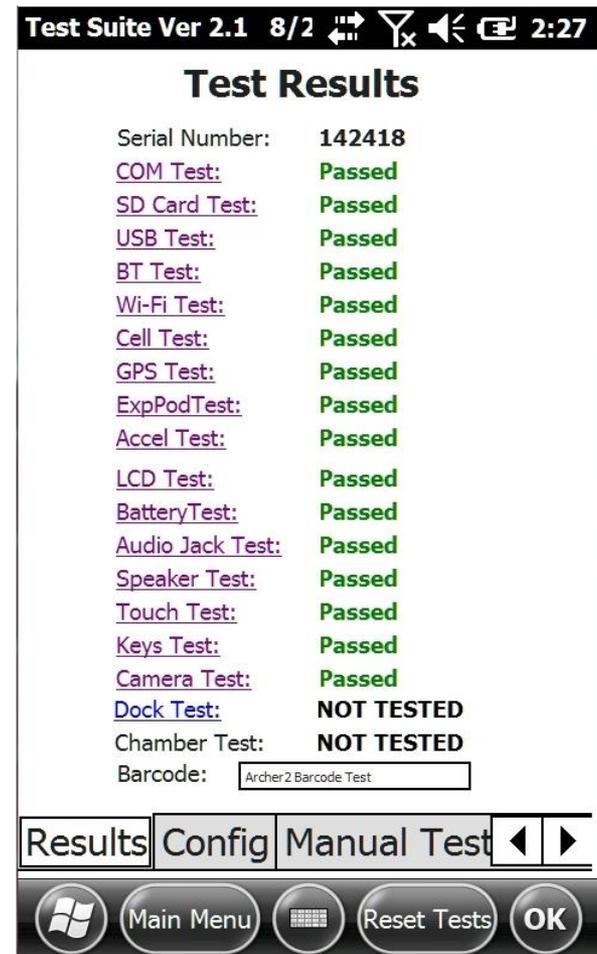

The **Dock** and **Chamber** tests in the Test Suite are for Manufacturing only. **The Dock Test for Repair Centers is found in the next slide.**

Verify that all applicable tests **“Passed”**.

Tap **OK** to close the test suite. Open My Device and delete the **TestSoft** folder.

NOTE: If a test fails, re-run the test. If it continues to fail, run Desktop Portion test to see error messages.

Dock Test (with docking I/O modules only)

NOTE: The Ethernet dock will not communicate properly if the USB and network cables are plugged in at the same time. The Ethernet Dock must have a 24076 20W wall charger plugged in.

1. Plug the dock's **USB cable** into your PC. **DO NOT PLUG YOUR NETWORK CABLE IN AT THIS TIME.**
2. Make sure that Wi-Fi and cell modem on the Archer are turned off. Install the Archer in the Ethernet dock.
3. Verify that that the Red charging LED on the Archer turns on and that the External Power indicator appears at the top of the screen.
4. Verify that the unit makes a Windows Mobile Device Center or Activesync connection to the PC.
5. **Remove the unit from the dock and suspend it for 15 seconds while you unplug the USB cable from your PC**
6. Plug the **network cable** into the dock.
4. Place the unit back in the dock. Tap on **Start** and open **Internet Explorer**. Tap on the **Favorites** star and select **Bing**. Verify that the unit connects to the website.
5. Remove the unit from the dock and return IE to its Home page. **Unplug the network cable.**

Test Suite, Continued

1. Tap on the **Speaker** button and follow the on-screen instructions. Observe that **"Passed"** is displayed.
2. Tap on the **Touch** button and the follow on-screen instructions. Observe that **"Passed"** is displayed.
3. Tap on the **Keys** button and the follow on-screen instructions. Observe that **"Passed"** is displayed.
4. Geo units only: Tap on **Camera** > Menu > Flash > On. Tap on the **Camera** button in the Test Suite. Follow the on-screen instructions. Observe that camera flash works in each test, that pictures are clear and focused. Observe that **"Passed"** is displayed when the tests are complete.
5. Geo units only: Hold the UUT under a GPS repeater or take the unit outside where it has a clear view of the sky. Tap on the **GPS** button and observe that **"Passed"** is displayed. This test may take a few minutes as GPS creates a satellite almanac.

Verify that all applicable tests **"Passed"** .
Tap OK to close the Test Suite.

NOTE: If a test fails, re-run the test. If it continues to fail, run Desktop Portion test to see error messages.

Ver 1.3b Reset Tests OK

If you replaced Main PCBA, Update Wi-Fi Configuration and Model Number

Perform Wi-Fi configuration & Model update if you replaced the Main PCBA.

1. Install USB Test drive in Archer 2.
2. Plug 12V wall charger into unit.
3. Install your USB Test drive. Start *File Explorer* and copy the *TestSoft* folder from *Hard Disk* to *My Device*. Go into the *TestSoft* folder on *My Device* and tap on **AR2_AG2_Test_Suite.exe**.
4. Tap on **Config**. Verify **Wi-Fi Type** is correct.
5. **To change:** Tap on the **Wi-Fi Type** menu arrow and select *International* or *US*. **Selecting None will disable Wi-Fi.**
6. Verify that **Model Number** is correct.
7. **To change:** Tap in the Model Number field and enter the correct number from the list shown at right.

Update OS & Firmware

Important: Plug 12V external power into UUT before performing update.

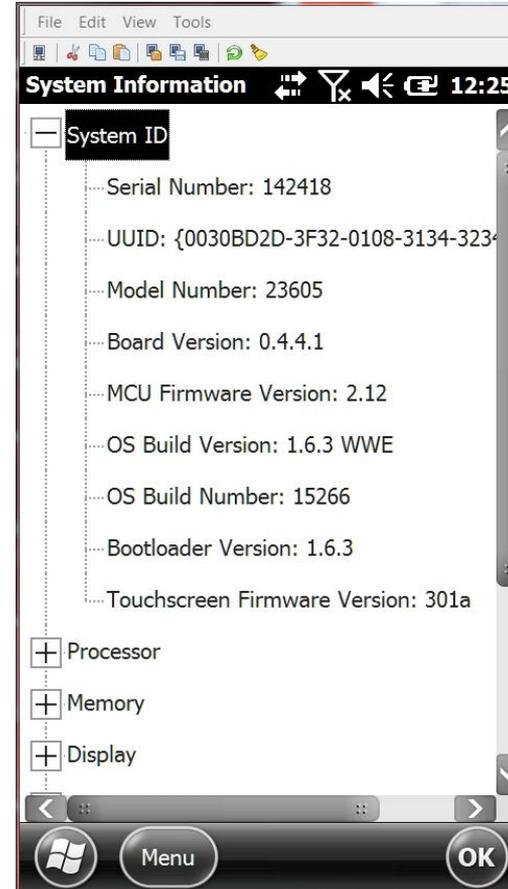

Verify that OS, bootloader, and firmware versions are current.

To update, connect UUT to your PC with USB cable and make a Windows Mobile Device Center connection.

1. Run the applicable language OS installer on your PC. For English OS, run the **Archer-2-OS-***-English.exe**. Follow on-screen instructions. Click **GREEN** check box to complete each step.
2. Unit will reboot & display **Updating Firmware** followed by **Updating OS**.
3. Unit may require additional reboots to reload barcode .CABs, etc. Tap OK when prompted.
4. After the device reboots, check OS, bootloaders, and firmware versions to confirm that the updates were successful. (Settings > System > System Information > System ID.)

Confirm OS updated correctly.

Example:

Update Touch Screen Firmware

Important: Plug 12V external power into UUT before performing update.

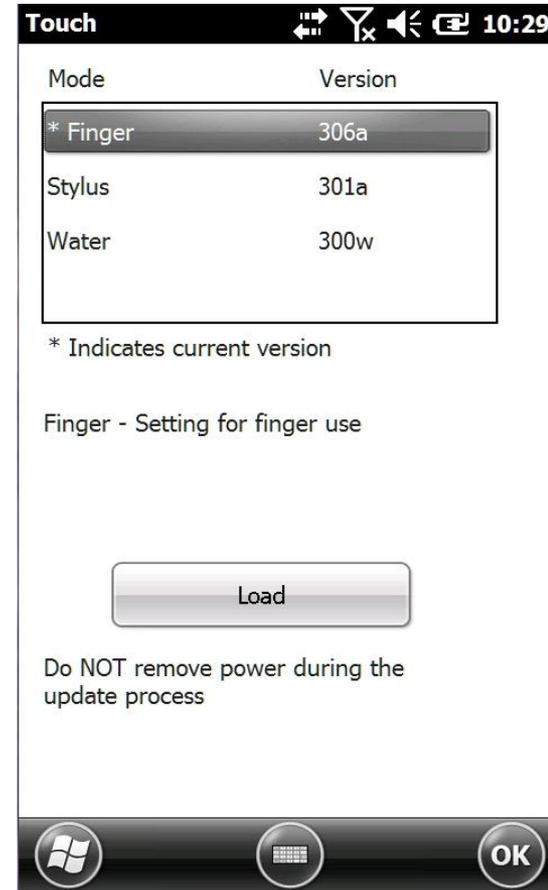

The 306a, 301a, & 300w touch screen firmware comes standard with OS 1.5.2. You should never have to update the touch screen firmware unless the customer will not agree to updating to OS 1.5.2.

OS 1.5.2 or above is required for the 3 touch screen firmware..**

1. To update, connect UUT to your PC with USB cable and make a Windows Mobile Device Center connection.
2. To install, copy the **AR2-Touch-Patch.CAB** file to the Archer 2, locate the file in File Explorer on the unit.
3. Tap on the file. The system will soft Reset automatically.
4. After installation, tap on **Start > Settings > System > Touch**, select a new profile, then tap **Load**.

Select Touch Screen Firmware Version

Example:

Final Cell Modem Test - *Only if cell problems were reported*

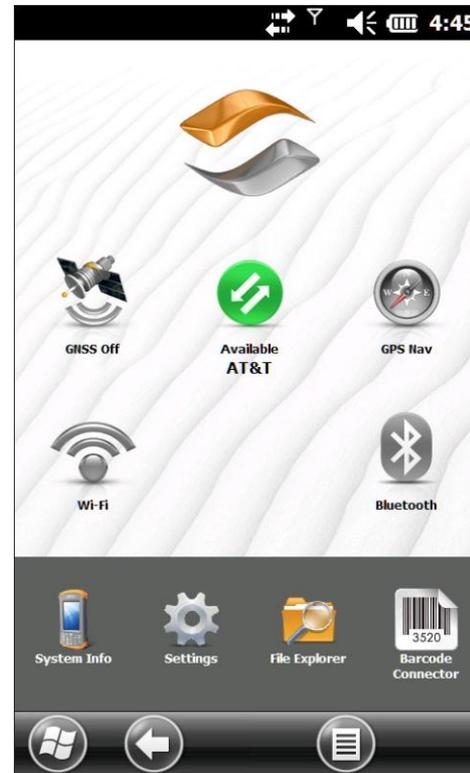

Confirm that cell modem & SIM card are working.

Note: This test requires a functioning SIM card for your area. To install the SIM card, you must *Power-Off*, then remove battery. Install the SIM card in the SIM card tray, reinstall battery, and boot the UUT.

1. In Home screen, tap on the **3G Modem** widget. Observe that the modem powers-up and displays **Available**. This may take a couple of minutes.
2. Tap on Start > Internet Explorer. Tap on the **Favorites** star and select **Bing**.
3. Observe that the unit connects to the website. Close Internet Explorer and turn off the 3G Modem.

This test confirms that the cell modem and SIM are working, not just available.

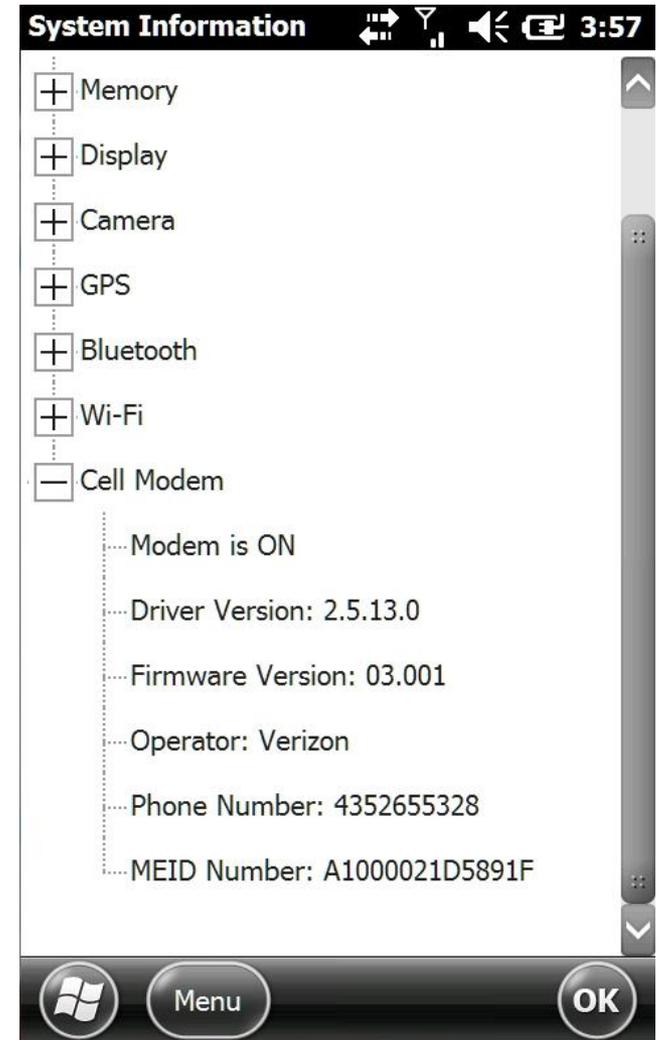

IMPORTANT: 24771 CDMA Cell Modem Registration

NOTE: If you have replaced a 24771 CDMA modem, the MEID numbers from the new modem must be entered in the Juniper Systems Quality Database and registered on the Verizon Portal.

Send the Archer's serial number and the MEID number to the Mfg. Support Software Engineer and Mfg. Support Group Manager. They will register the new modem within 24 hours (M-F).

Repair Centers: Contact your JS Repair Center Account Manager with the information; they will pass it on to Mfg. Support.

Start Desktop Portion Test Suite – Burn new SN# / Diagnostic Tests

Burn new Serial number and run

1. From the test station computer desktop, open the Archer 2 test suite. The display shown at right will appear.
2. Scan the unit serial number into the serial number box in the upper left.
3. Select *Run Tests*.

Archer2 PC Test Suite Ver 1.0 10/28/13

UPDATE Desktop Portion Test Suite to Burn New SN# / Diagnostic

Burn Serial Number on New PCBA - Diagnostics Test

Connect UUT to your PC with USB cable and make a Windows Mobile Device Center connection. Install your AR2 USB Test drive in PC. Navigate to USB:\Archer 2\23407 AR2 Test Suite V 1.3c\Desktop Portion

1. Run the Archer2_PC_Test_Suite.exe on your PC. The display shown at right will appear.

Make sure the barcode scanner is aimed at the barcode test target before starting the tests. You may not have time to aim it manually.

2. **To start the tests and to burn a serial number for a new PCBA**, you first must type the SN# in the *Serial* window, then click the *Run Tests* button.
3. This test program will display diagnostic errors in the *Errors* column. These may help you identify and correct a problem.
4. Click *Reset Tests* to clear results and start again.
5. Disconnect USB cable.

Program Status:

Run Tests

Reset Tests **Reconnect**

NOTE: The Desktop Portion tests are automated, but the *Audio Jack, Speaker/Mic, Touchscreen, and Keyboard* tests require your input on the handheld. The Desktop test will install the handheld test suite on the UUT. When the tests are complete, the *Test Soft* folder must be manually deleted from the UUT's *My Device*.

Use Desktop Test Suite to see Failure Diagnostics

If unit fails manual tests, use Desktop Test Suite to view diagnostic error messages:

Install required test fixtures on the Allegro.

Connect the UUT to your PC with micro USB cable. Make a Windows Mobile Device Center connection.

Navigate to the *Archer 2 23407 AR2_AG2 Test Suite V *.** folder on your PC.

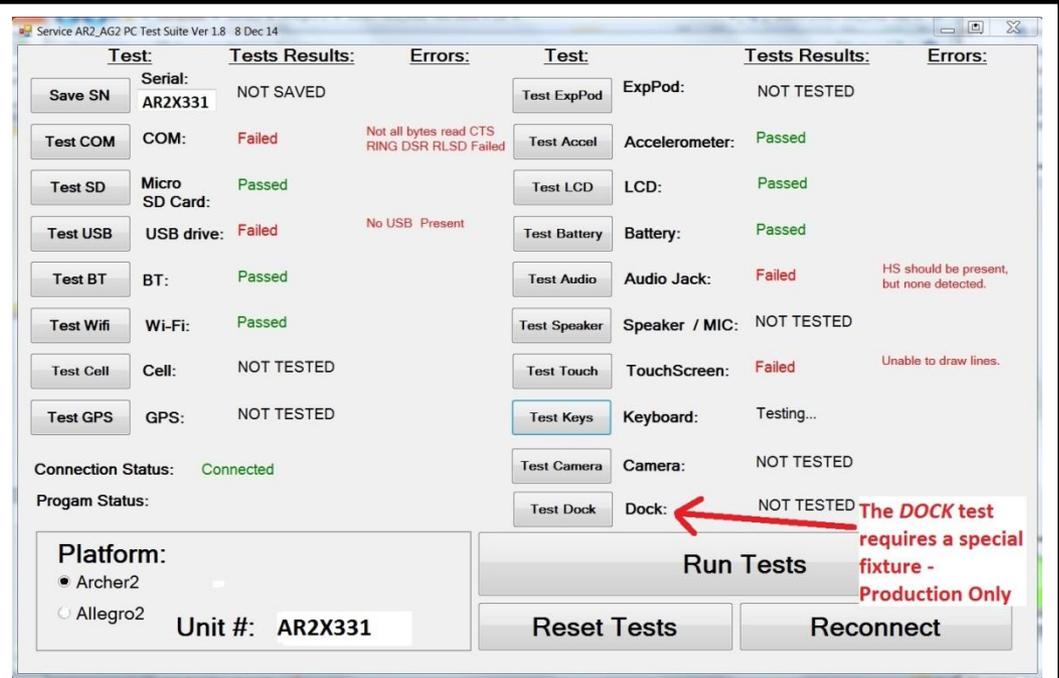

Run the *Service_AR2_AG2_PC_Test_Suite*.

1. Check the *Archer2* box under *Platform*.
2. Enter the SN# of the UUT in the *Serial* window, then click the *Run Tests* button.

NOTE: If you get an error stating that the firmware versions are out of date, click the button to run the tests anyway.

1. This test program will display diagnostic errors in the *Errors* column. These may help you identify and correct a problem.
2. If needed, click *Reset Tests* to clear results and start again.

 Disconnect USB cable from UUT and delete *TestSoft* from UUT's *My Device*.

Run Tests

Reset Tests

Reconnect

The DOCK test requires a special fixture - Production Only

NOTE: Remove the USB drive before running the LCD test; the test may fail otherwise. If the LCD test fails the first time, run it again.

The Audio Jack, Speaker/Mic, Touchscreen, Keyboard, & Camera tests require your input on the handheld. The Desktop test will install the handheld test suite on the UUT.

When the tests are complete, the Test Soft folder must be manually deleted from the UUT's My Device.

Perform RMA Leak Test

Parts List		
Qty	JSPN	Description
	24615	AR2 Leak-Test Door
		Bubble Test Fixture

Ref: 12333-** Bubble-Test.TST.doc

 Perform leak test on
r unit **before** performing
o sts.

1. Refer to the 12333-**
Bubble-Test.TST.doc for
instructions.
2. If the unit fails, it will need to be
re-worked until it passes.
3. **NOTE: Do not install 24470
hydrophobic vent patch until
RMA tests are complete.**

Apply Product and Void Labels

Parts List		
Qty	JSPN	Description
1		Product Label
1	13230	Tamper-Proof (Void) Label

1. Verify product label is correct.
Install new label as needed.

REF: 23400- AR2 SC FCF
document for the correct label.**

1. Place the *Void* label lengthwise
across the seam at the top of the
unit as shown.

Final Inspection

1. Remove all test fixtures. **Do not forget test batteries and test SD cards.**
2. Reinstall customer's cards (if any).
3. Reinstall customer's battery and battery door.
4.  **Install 24470 Hydrophobic Vent patch.**
5. Install top & bottom bumpers & stylus.
6. Clean the unit (including bumpers, elastomer, keyboard bezel, and door) with Greased Lightning Multi-Purpose Cleaner, Windex, or mild soap & water.
7. Inspect unit for any flaws or missing parts, scratches, etc.
8. Complete RMA paperwork.
9. Confirm unit is Powered Off.
10. Confirm that all accessories received with the UUT are in the box before shipping.

Test Windows Mobile Device Center Connection

WMDC Connection Test

Setup Windows Mobile Device Center:

1. Start Windows Mobile Device Center. Click on **Mobile Device Settings > Connection Settings**.
2. Check the box at the bottom to **“Allow data connections on device when connected to PC”**

Test WMDC Connection:

1. Plug in the micro-USB comm cable from the test computer.
2. Verify that unit establishes a Windows Mobile Device Center connection.
3. Disconnect cable from the UUT if ~~no further tests need to be run from~~ PC.

FC-500's ONLY - FC-500 JSCAB Update

Assembly Instructions

If you have replaced the programmed internal microSD card on an FC-500, you must perform the following FC-500.CAB update to install the Topcon splash screens and change the I/O configuration to enable the FC-500 keyboard.

NOTE: A 24618 FC-500 KEYBOARD ASSEMBLY MUST BE INSTALLED BEFORE PERFORMING THIS UPDATE

1. Copy all files in the FC500 JSCAB Install folder to the root directory of a microSD card.
2. Ensure there are no other files (folders are fine) on the root of the SD card.
3. Install the SD card in the FC-500.
4. Reset the FC-500.
