DUBAI

Dubai - an amazing place in the middle of the desert, in which the achievements of scientific and technological progress of the XXI century intertwined with the ancient culture. One of the most ambitious projects of the emirate has become artificial islands.

ISLANDS

Palm islands - an archipelago of artificial islands, created by the hands of man on Earth. Between the islands there are also artificial archipelagos "World" and "Universe" from small islands. All this creation can be seen from the moon with the naked eye.

Let's start with the palm islands. They are in the UAE, in the emirate of Dubai. The archipelago consists of three large islands, each having a form of palm tree.

PALM JUMEIRAH

Palm Jumeirah is the smallest and most original of the three islands. This is the first palm island and a great achievement in the history of world architecture. The construction of the island was started in June 2001, in 2006 it was commissioned.
