# PRESENTATION

Performed by a student of the TAAT-311 group Daniil Rylnikov

## ENVIRONMENTAL ISSUES

HARMFUL EFFECTS OF HUMAN ACTIVITY ON THE BIO PHYSICAL ENVIRONMENT.

### ENVIRONMENTAL ISSUES:

WATER POLLUTION
AIR POLLUTION
DEFORESTATION
GLOBAL WARMING

5. The destruction of the ozone layer

#### 1. WATER POLLUTION

The quality of water in lakes, rivers, seas and other bodies of water gradually deteriorates due to the ingress of chemical, biological and physical substances that are not characteristic of a clean body of water.

#### 2. AIR POLLUTION

•NATURAL POLLUTION OCCURS DURING VOLCANIC ERUPTIONS, SANDSTORMS, AND FOREST FIRES.

• **INDUSTRIAL POLLUTION** IS EMISSIONS FROM TRANSPORT, THERMAL POWER PLANTS, FACTORIES, AGRICULTURE, AND LANDFILLS.

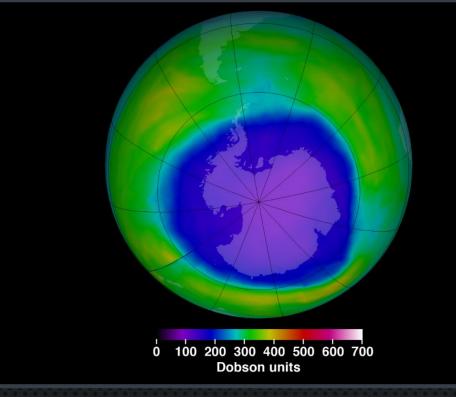

#### 3. DEFORESTATION

The importance of forests in our world is very great, and the destruction of these ecosystems can lead to the most serious consequences.

#### 4. GLOBAL WARMING

The main reason for the increase in the average temperature of the environment lies in the strengthening of human industrial activity. The air and water temperature increased by about 0.74 °C. Despite such a small value, the consequences can be enormous, if you believe the scientific papers.

# 5. THE DESTRUCTION OF THE OZONE LAYER

•When the concentration of ozone in the atmosphere decreases, a person receives an increased dose of ultraviolet light. Scientists have found that this leads to the occurrence of skin cancer and malignant melanoma, as well as to serious eye diseases

# CONCLUSION:

As you can see, the risks faced by our world are quite a lot. However, there is only one reason for them. This is the consumer attitude of a person to the planet, its resources, other living beings that inhabit it, and, moreover, to each other.

# THANK YOU FOR WATCHING

Let's keep nature together
