

ENVIRONMENT

Cosmodrome Baikonur

Baikonur has a negative impact on the environment of Kazakhstan and the Asian part of Russia, over which the missile routes pass

In addition to environmental pollution separated parts of the missiles. toxic components of rocket fuel that cause pathology in animals and humans. These include the violation of bilirubin metabolism, anemia of pregnant women, the birth of "yellow" children.

The activity of the cosmodrome was called as one of the possible reasons for the mass death of animals
