

# Protection of the population from weapons of mass destruction

## The main principles of the protection of the population:

- Advance preparation
- Differential approach
- The complexity of the activities

The main ways to protect the population from weapons of mass destruction are: Uritu in protective structures, the use of individual protection, evacuation of the population and dispersal of workers and employees from the cities to the suburban zone

# Personal protective equipment can be subdivided into:

- Respiratory protection
- Skin protection
- health care aids

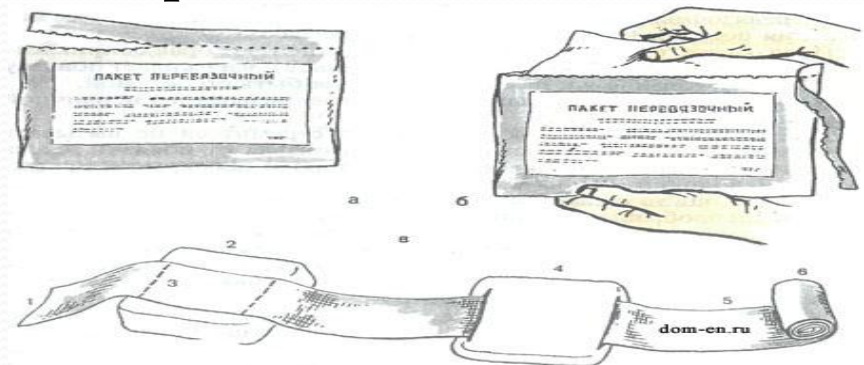

# Respiratory protection:

- Gas masks
  - Isolation(ИП-4,ИП-6,КИП-7,КИП-5,8)
  - Filter(ГП-5,ГП-7, ДП-6м,ПДФ-7,ПДФ-Д, ПДФ-Ш)
- Respirators(Р-2,Р-2Д)
- simple tools manufactured by the population (РТМ-1 mask, cotton-gauze bandage)

## For Scheduled MSIP include:

1. First Aid Kit Individual (AI-2 in the first aid kit includes a set of drugs that prevent or reduce the impact on the human body to ionizing radiation, OB, BS.)
2. individulnaya anti-gas package (IPP-8) is used for the partial sanitization exposed skin of plots and adjacent clothing in contact with them, the drip-liquid or aerosol mist
3. individulny dressing package are used for dressing wounds, burns, and stop bleeding Dumb species

# Organization of medical maintenance of the population in the evacuation and dispersal
