# Energetic

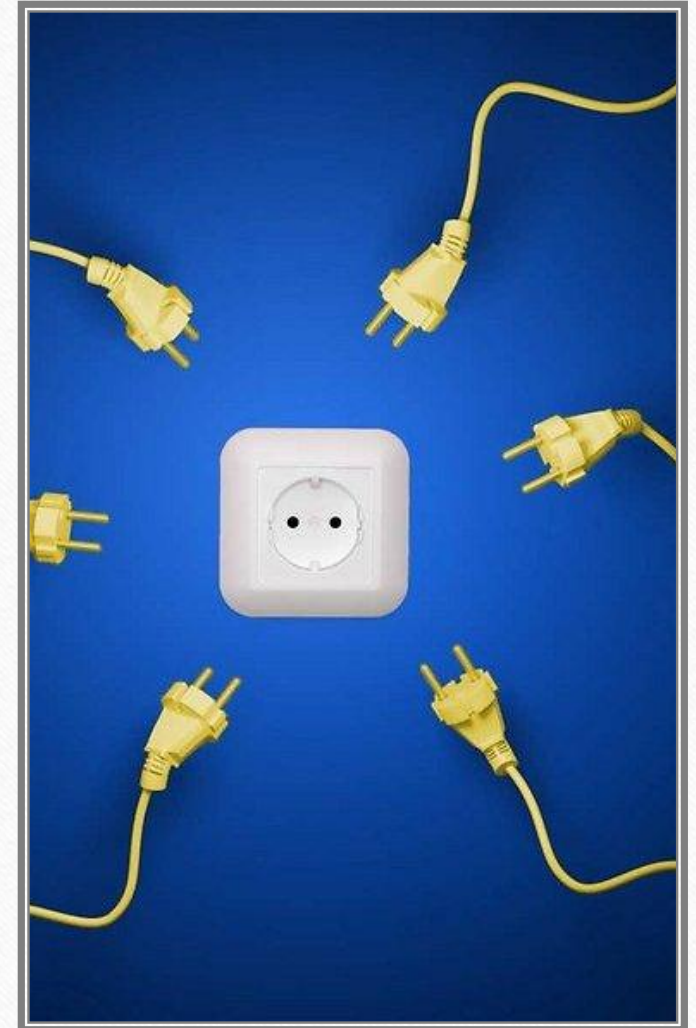

---

- Energetic is a specialist whose functions include the development, production, and operation of energy and heat supply systems. The peculiarity of the energy profession is that there are a lot of functions that people of this specialty can perform. Therefore, the duties assigned to them are directly dependent on the organization in which they work. Such specialists are needed in almost all enterprises. In addition, it is worth noting that the working day energy is very rich, busy and stressful. Therefore, in this profession busy people hardworking and hardy!

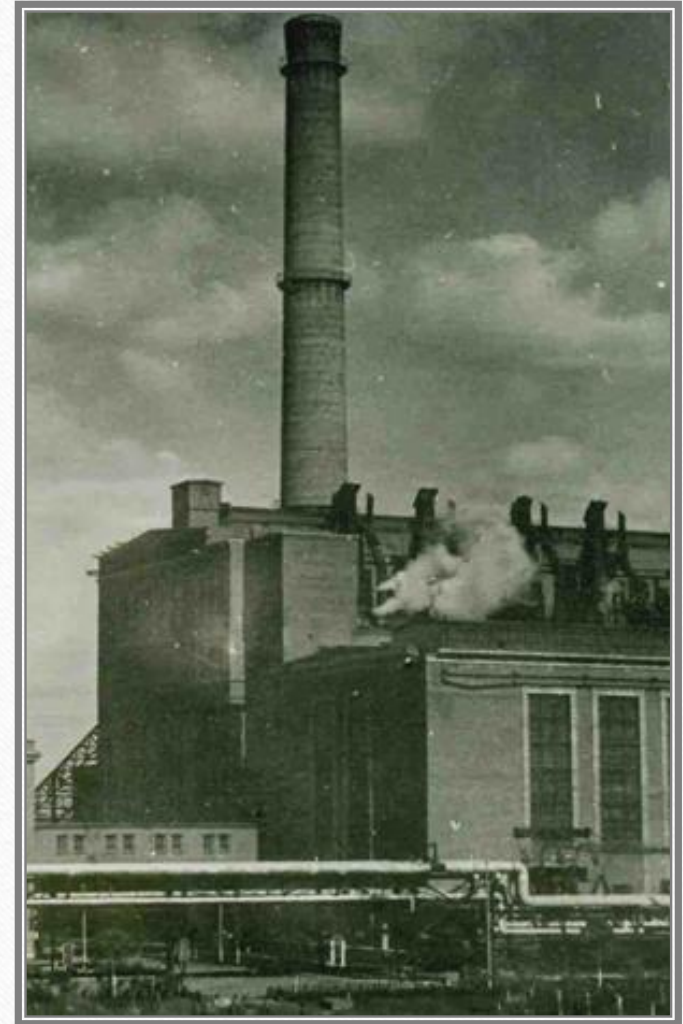

The demand for this profession in the labor market is high. After all, our modern life can not be imagined without a TV, computer, microwave, subway, electric trains, etc. we do not even think that we use these achievements thanks to the hard and hard work of the power engineers

a

The word "energy" has ancient Greek roots and came to the Russian language from German in the sense of "active force". The search for sources of such a force was engaged in ancient times. The appearance of the first power station in 1882 brought the energy activity to a completely new level.

Representatives of the profession Energy is really rare in our time. Not everyone will dare to become Energetic. There is a high demand among employers for specialists in this field; therefore, the energy profession has the right to be called a rare profession.
