

# Environmental issues of the world

The modern ecology has a set of important problems. For centuries man had used a huge amount of natural resources. Currently, the person is obliged to monitor the environment. People changed his mind too late, too late began to take action

A close-up photograph of a person's hand holding a small, realistic-looking globe of the Earth. The globe is covered in vibrant green moss, particularly around the edges and in the landmass areas, symbolizing nature and environmental care. The background is a soft-focus field of green grass. Overlaid on the center of the globe is the text: 

**what**  
**environmental**  
**issues are relevant**  
**now**

# Pollution of water resources

water is the resource without which we cannot survive not one person, not one living organism on the planet

# Cars

According to the world energy Council, about 17% of global greenhouse gas emissions in the atmosphere due to the operation of motor vehicles

# Work of factories

factories produce a huge amount of emissions released into the atmosphere, lithosphere and hydrosphere

# Forest cutting

Millions of hectares of deciduous and coniferous forests annually destroyed. Many of the territories that are left without wood as a result of deforestation or fires to turn into a wasteland

# Atomic weapon tests

Long-term environmental consequences of nuclear explosions will exceed the life expectancy of future generations. The effects of nuclear explosions may cease to exist all life on the planet

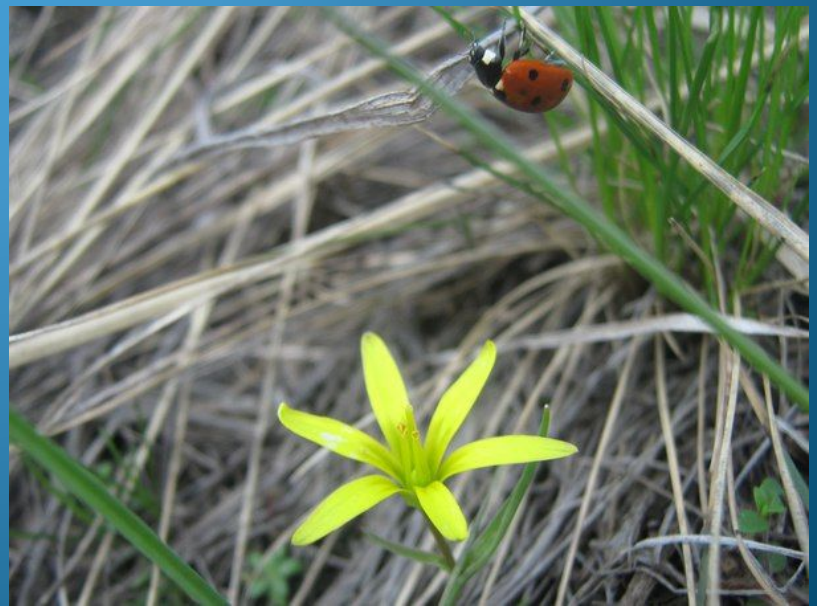

A happy life depends on the environment and we must change the situation only for the better. environmental problems are very serious and difficult but, together, humanity can cope and preserve the planet for future generations

In the result I would like to say that the governments of modern countries are beginning to pay attention to environmental problems of our planet. Countries such as Israel and the UK is a leader in fighting pollution of the environment. Each year, applies the improvement of factories and equipment which reduces harmful emissions in nature.

We must pay great attention to environmental safety. and first we must begin with ourselves.

**Thank you for your  
attention**
