Tanker - sea or river cargo ship. The tanker is designed for the carriage of bulk cargoes .

The hull is divided by partitions into a number of compartments, which are filled with bulk cargoes.

The hull consists of a frame to which is attached a metal sheathing.

The volume of one tank can be from 600 to 10 000 m³ .

Bulker - a vessel
or transportation of bulk cargo.

Bulker transports coal, grain, cement, ore.

Its deadweight is over 360,000 tons

Barge

Is a cargo vessel, it is used for transportation of goods on water.

Container ship

A specialized cargo vessel, for the carriage of goods in uniform enlarged cargo units. As a rule, the crew of a container ship consists of 10-26 people, since such ships are extremely automated.

Ice breaker

Copyright Aker Arctic

A self-propelled specialized vessel designed for various types of icebreaking operations in order to maintain navigation in freezing basins.

Gas carrier

A specially constructed vessel for the transport of liquefied natural gas (as well as liquefied petroleum gas - propane and butane) in tanks (tanks):

Trawler fishing vessel intended for fishing by trawling fish and non-fish objects and their primary processing.

Trawlers are equipped with refrigeration units for freezing and storage of products in holds.

Ferry

A boat used to transport passengers and vehicles between two banks of a water obstacle (a river, a lake, a strait and even a sea).
