

All About
Washing Your Hands

What Are Germs?

Washing your hands helps to remove germs. Germs are very, very tiny – they are so small we cannot see them.

Some germs can make us poorly. Washing our hands stops the germs from spreading or getting inside our bodies and making us feel ill.

When Should You Wash Your Hands?

It is important to wash your hands...

before eating

before touching food (e.g. cooking activities)

after going to the toilet

after blowing your nose, sneezing or coughing

after touching your pets or other animals

after playing outside

after playing with messy toys (e.g. playdough)

How to Wash Your Hands

First, turn on the tap and rinse your hands.

How to Wash Your Hands

Next, put some soap on your hands.

Sometimes you might use soap that comes out of a bottle and sometimes you might use a bar of soap.

Soap is very important for making your hands clean and getting rid of any germs.

How to Wash Your Hands

Then, rub your hands together for 20 seconds to make lots of bubbles and foam!

Make sure that your hands and all of your fingers are soapy and bubbly!

How to Wash Your Hands

Next, rinse your hands under the water again. Make sure to wash away all of the bubbles.

How to Wash Your Hands

The last thing to do is dry your hands. You could use a paper towel, a soft towel or a hand dryer.

If you use a paper towel, make sure you put it in the bin when you are finished!
