

Save the Earth!

The world's population
is 6 000, 000, 000!

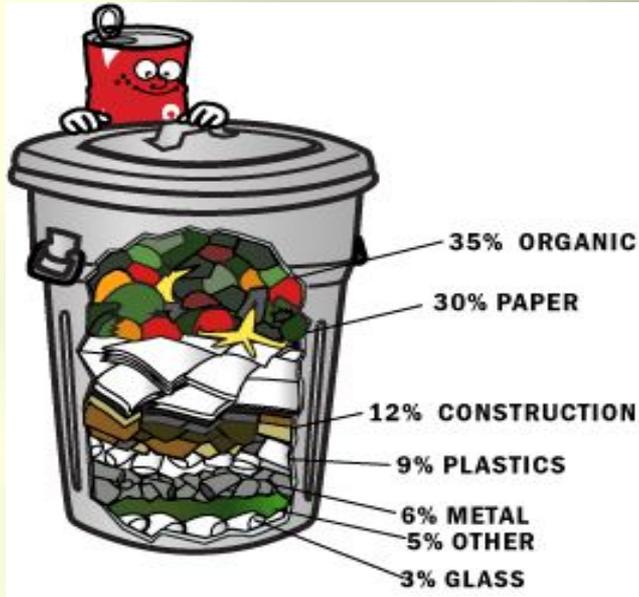

Our planet becomes more and more polluted.

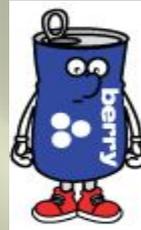

We throw away and leave:

Plastic bottles

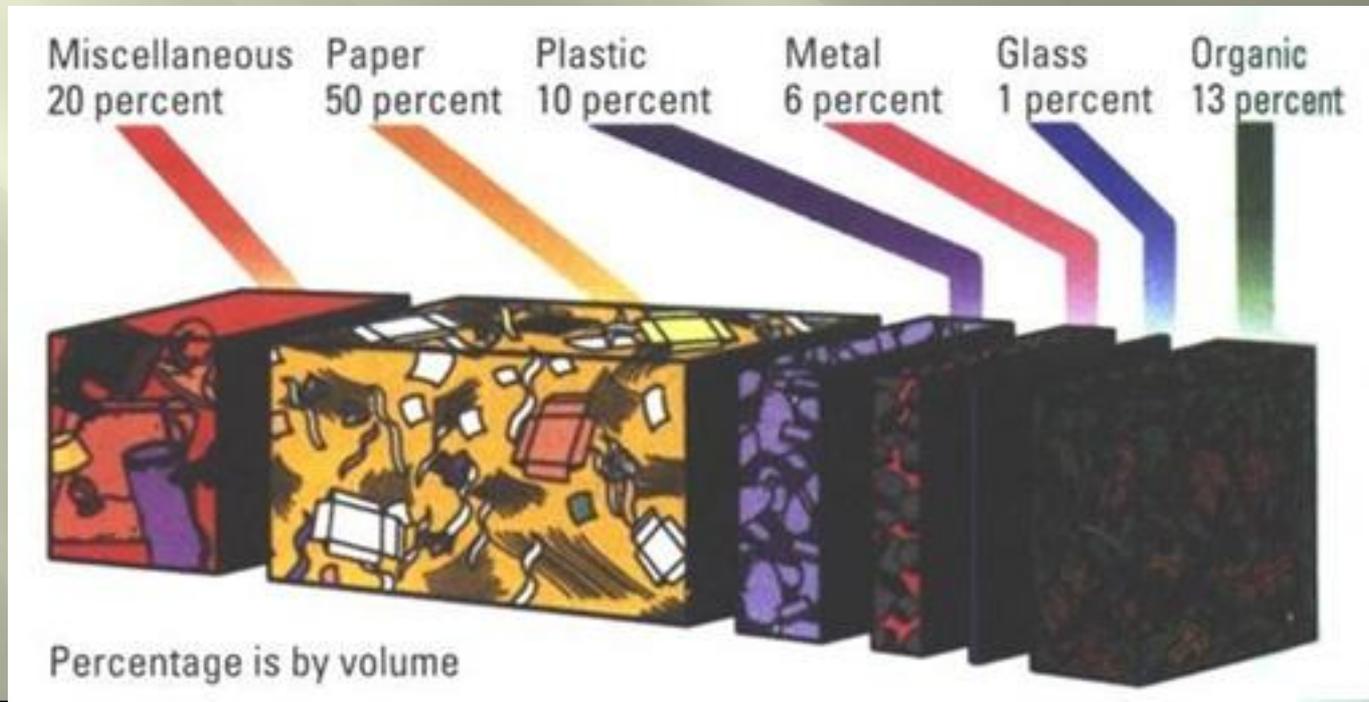

Glass bottles

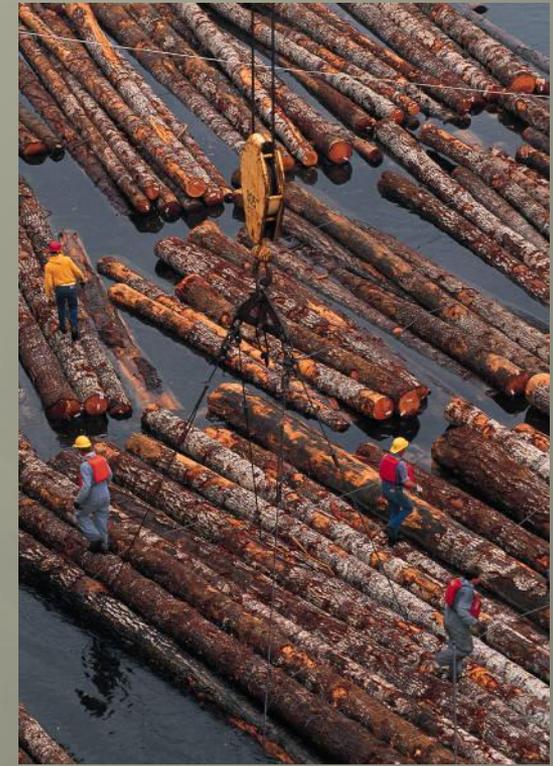

Cans

Paper

DEFORESTATION

We damage nature and spoil the environment.

We must remember the three R's:

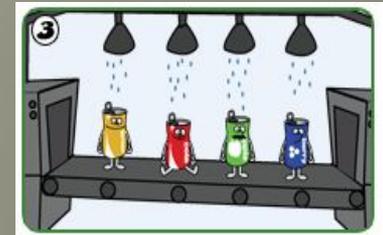

For example,

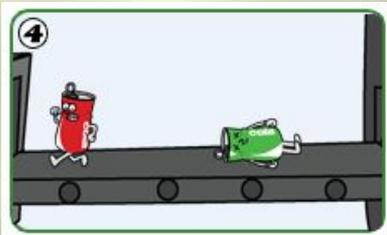

1
Throw the cans into a recycle bin.

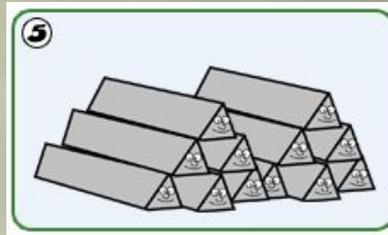

2
They are collected and taken to a treatment plant.

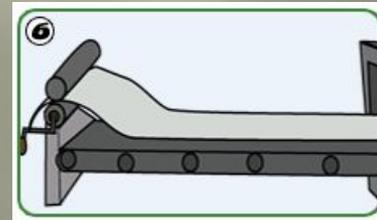

3
They are sorted and cleaned.

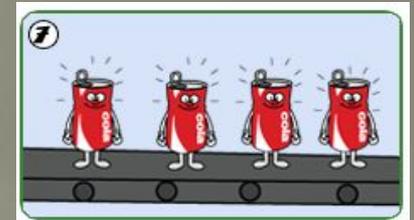

4
They turn into molten aluminium.

5
They are made into large blocks.

6
Then they are sent to mills where they are rolled out.

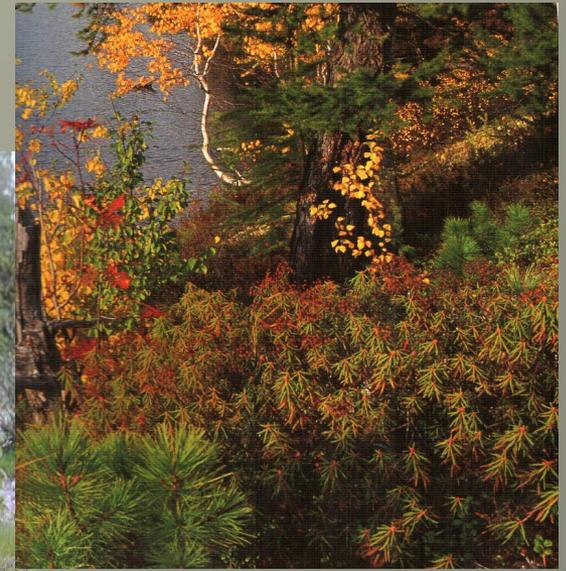

7
This is then made into aluminium products.

8
In as little as 6 weeks, the recycled products are sent back to the shops ready to be used again.

Our region

Protect wildlife, plants and trees.
