Powder /Water / Concentration Adjustment

Adjustment Overview

- We combine Powder/water/concentration adjustment into one step
- We use the recommended powder & water level on milk package to get the right concentration
- User can test and adjust powder & water in the same time
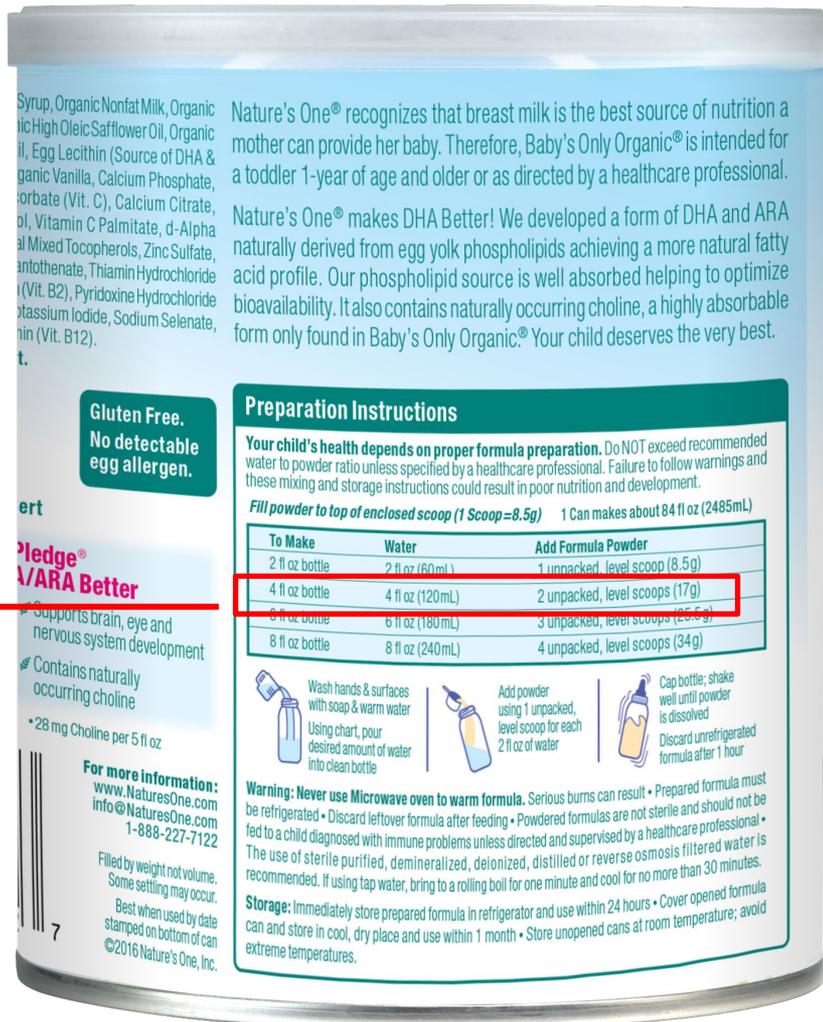

Long Press" +" and Go
into Setting mode

LCD shows 'C 01', means the
01 function,
Press '+' again to go into
concentration setting page.

User can find the milk powder package and choose a recommended powder& water amount

In this case, the recommended powder is 17g, and water is 120ml
The concentration is 17g/120ml

What we will do next, is to test& set the powder to 17g, and water to 120ml, so that the concentration will be right

Nature's One® recognizes that breast milk is the best source of nutrition a
mother can provide her baby. Therefore, Baby's Only Organic® is intended for
a toddler 1-year of age and older or as directed by a healthcare professional.

Nature's One® makes DHA Better! We developed a form of DHA and ARA
naturally derived from egg yolk phospholipids achieving a more natural fatty
acid profile. Our phospholipid source is well absorbed helping to optimize
bioavailability. It also contains naturally occurring choline, a highly absorbable
form only found in Baby's Only Organic.® Your child deserves the very best.

Preparation Instructions

Your child's health depends on proper formula preparation. Do NOT exceed recommended
water to powder ratio unless specified by a healthcare professional. Failure to follow warnings and
these mixing and storage instructions could result in poor nutrition and development.

Fill powder to top of enclosed scoop (1 Scoop = 8.5g) 1 Can makes about 84 fl oz (2485mL)

To Make	Water	Add Formula Powder
2 fl oz bottle	2 fl oz (60mL)	1 unpacked, level scoop (8.5g)
4 fl oz bottle	4 fl oz (120mL)	2 unpacked, level scoops (17g)
6 fl oz bottle	6 fl oz (180mL)	3 unpacked, level scoops (25.5g)
8 fl oz bottle	8 fl oz (240mL)	4 unpacked, level scoops (34g)

Wash hands & surfaces
with soap & warm water

Using chart, pour
desired amount of water
into clean bottle

Add powder
using 1 unpacked,
level scoop for each
2 fl oz of water

Cap bottle; shake
well until powder
is dissolved

Discard unrefrigerated
formula after 1 hour

Warning: Never use Microwave oven to warm formula. Serious burns can result • Prepared formula must
be refrigerated • Discard leftover formula after feeding • Powdered formulas are not sterile and should not be
fed to a child diagnosed with immune problems unless directed and supervised by a healthcare professional •
The use of sterile purified, demineralized, deionized, distilled or reverse osmosis filtered water is
recommended. If using tap water, bring to a rolling boil for one minute and cool for no more than 30 minutes.

Storage: Immediately store prepared formula in refrigerator and use within 24 hours • Cover opened formula
can and store in cool, dry place and use within 1 month • Store unopened cans at room temperature; avoid
extreme temperatures.

Step 1: Enter package powder amount

Once gone into 'C01', the 'g' led will blink, means you have entered powder adjustment page.

Here, you need to enter the amount of powder shown on the back of powder package, in this case, you need to enter '17'
You can press the '+' and '-' on the right side to adjust the number

Press 'Start', and it will pour milk powder only.

Press '+' and go into next step

Step 2: Adjust real powder amount

User needs to weight the real powder in Step 1, and enter it back into the device. For example, the real powder is 15g, and you need to enter 15 onto device.
You can press '+' and '-' on the right to adjust the number

Then, the milk powder is adjusted automatically

You can press 'start' again to test if the real powder is correct, if it's not, then you can adjust it until it's right

Now, the powder is adjusted and tested. Press '+' and go into next step

Step 3: Enter package water amount

At this stage, the 'ml' led will blink, means you have entered water setting page.

Here, you need to enter the amount of water shown on the back of powder package, in this case, you need to enter '120'

Press 'Start', and it will pour water only.

Press '+' and go into next step

Step 4: Adjust real water amount

User needs to weight the real water amount in Step 3, and enter it back into the device. For example, the real powder is 118ml, and you need to enter 118 onto device.
You can press '+' and '-' to adjust the number

Then, the water is adjusted automatically

You can press 'start' again to test if the water amount is correct, if it's not, then you can adjust it until it's right

Now, the water is adjusted and tested.

Step 5: Exit

Since the powder is adjusted and the setting amount is the recommended value, and the water is also adjusted, and the setting amount is also recommended value.

Then machine will have the right concentration adjusted at the same time

User can press '+' again to exit setting mode.

This way is the simplest way to test and set milk powder, water and concentration at the same time.
