

Gigantosaurus

Gigantosaurus were a type of dinosaurs which appeared about 98-97 million years ago

**Gigantosaurus could grow up to 12,5 m in length
and about 4,2 m in height,weighed about 6500
kg**

The length of his skull was reached 160 cm. The mouth of a dinosaur was big, but the teeth were small and concave inward

They ate small animals

65 million years ago asteroid with a diameter of about 10 kilometers was fallen to Earth

The Earth's surface has cooled down and all living organisms weighing more than 25 kg were consumed
