SmartBed

A group of five business professionals (three men and two women) are gathered around a table in a modern office setting, looking at documents and discussing them. The scene is dimly lit, with light coming from large windows in the background. The text is overlaid on the left side of the image.

In the fast developing world people need more time to relax and feel comfortable

That is why we thought about a bed as one of the most comforting and coziest objects that can be improved to fit its user

We proudly present the **SmartBed**

Convenient. Functional. Modern.

Unique

SmartBed is full of surprises that nobody expects from a bed

Efficient

Price is not high compared to similar goods

Multifunctional

Comfort for sleeping is not the only option

Interactive

Control your bed as you wish

While developing SmartBed, we had some issues in mind which are familiar to everyone, including

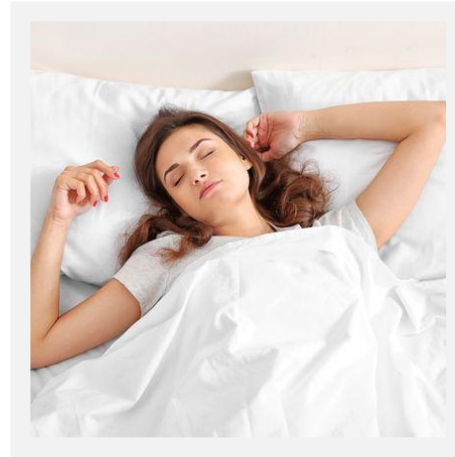

Routine

It takes time and effort to make your bed comfortable and make it after sleep to distort the order

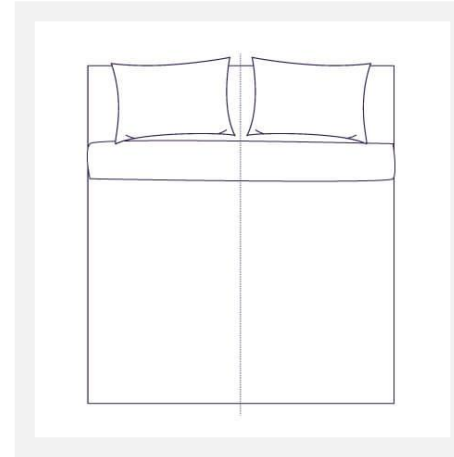

Temperature preferences

Bed is too cold to get into in winter, too warm in summer

Getting up

Beds are comfy and alarm clock is annoying to use

Size

Some beds take too much space or are too small for tall people

Simplicity

We spend a lot of time in bed, so why not to make it even more pleasant?

Main Functions

Bed is bed. However, there is more to it. Here are some functions which could be good for a SmartBed to have.

A solution for hard-working people

Have you ever been in this situation?

You very tired, but you need to turn on the kettle or turn off the light in the room.

SmartBed is for you!

Connect this bed to SmartHome, and you can do chores while you are lying in the bed.

For example, turn on the robot vacuum cleaner, turn off the lights, and much more!

SmartHome Support

Connect your bed to your SmartHome System
Control it remotely

Automatic Blanket System (ABS)

Spare some time in the morning and let your bed take care of sheets and blankets.

Forget about making your bed

Did you always make your bed after sleep yourself? Are you tired of this?

If so, we have found a solution to this problem for you.

There is a function in a smart bed and with this, the bed is made after sleep. Small strings, invisible to your eye and not disturbing your sleep, pull the blanket and sheets to the corners.

Enjoy freshly fluffed pillows

Clap your hands ones - one pillow fluffs
and waits for you on its place in your bed.

Clap your hands two times - two pillows
fluff, and so on.

A small chip in each of the SmartPillows
control a simple system inside a pillow that
restores the form of the pillow.

Automatic Pillow System (APS)

Do not bother fluffing your pillows before
each sleep

Temperature Control

Maintain comfortable temperature for sleeping

Ready for your sleep

In the cold winter, when we go to bed, we are cold, but SmartBed is heated at a certain temperature.

You can control the temperature of the bed for your own needs. If you prefer a cold bed, SmartBed will circulate cold air deep inside the mattress.

Press the button 10 minutes before going to bed or command via SmartBed app.

Wake up with comfort

One of the most important features is that SmartBed has an alarm clock built in.

Set it for any time, and feel, how SmartBed wakes you gently by vibrating or pulling your blanket away from you. Enjoy a variety of settings which include customization of your own tune.

Built-in Soft Alarm Clock

Ensure that alarm clock is in your aid

Best of Beds

Experience most comfortable sleep of your life

Need to move?

SmartBed is a very compact bed.

It can easily gather into a sofa and disappear into the wall.

It is surprisingly soft and high enough for a comfortable sleep for any person with any height. Moreover, it can be easily moved to another apartment, room, and it is still very light.

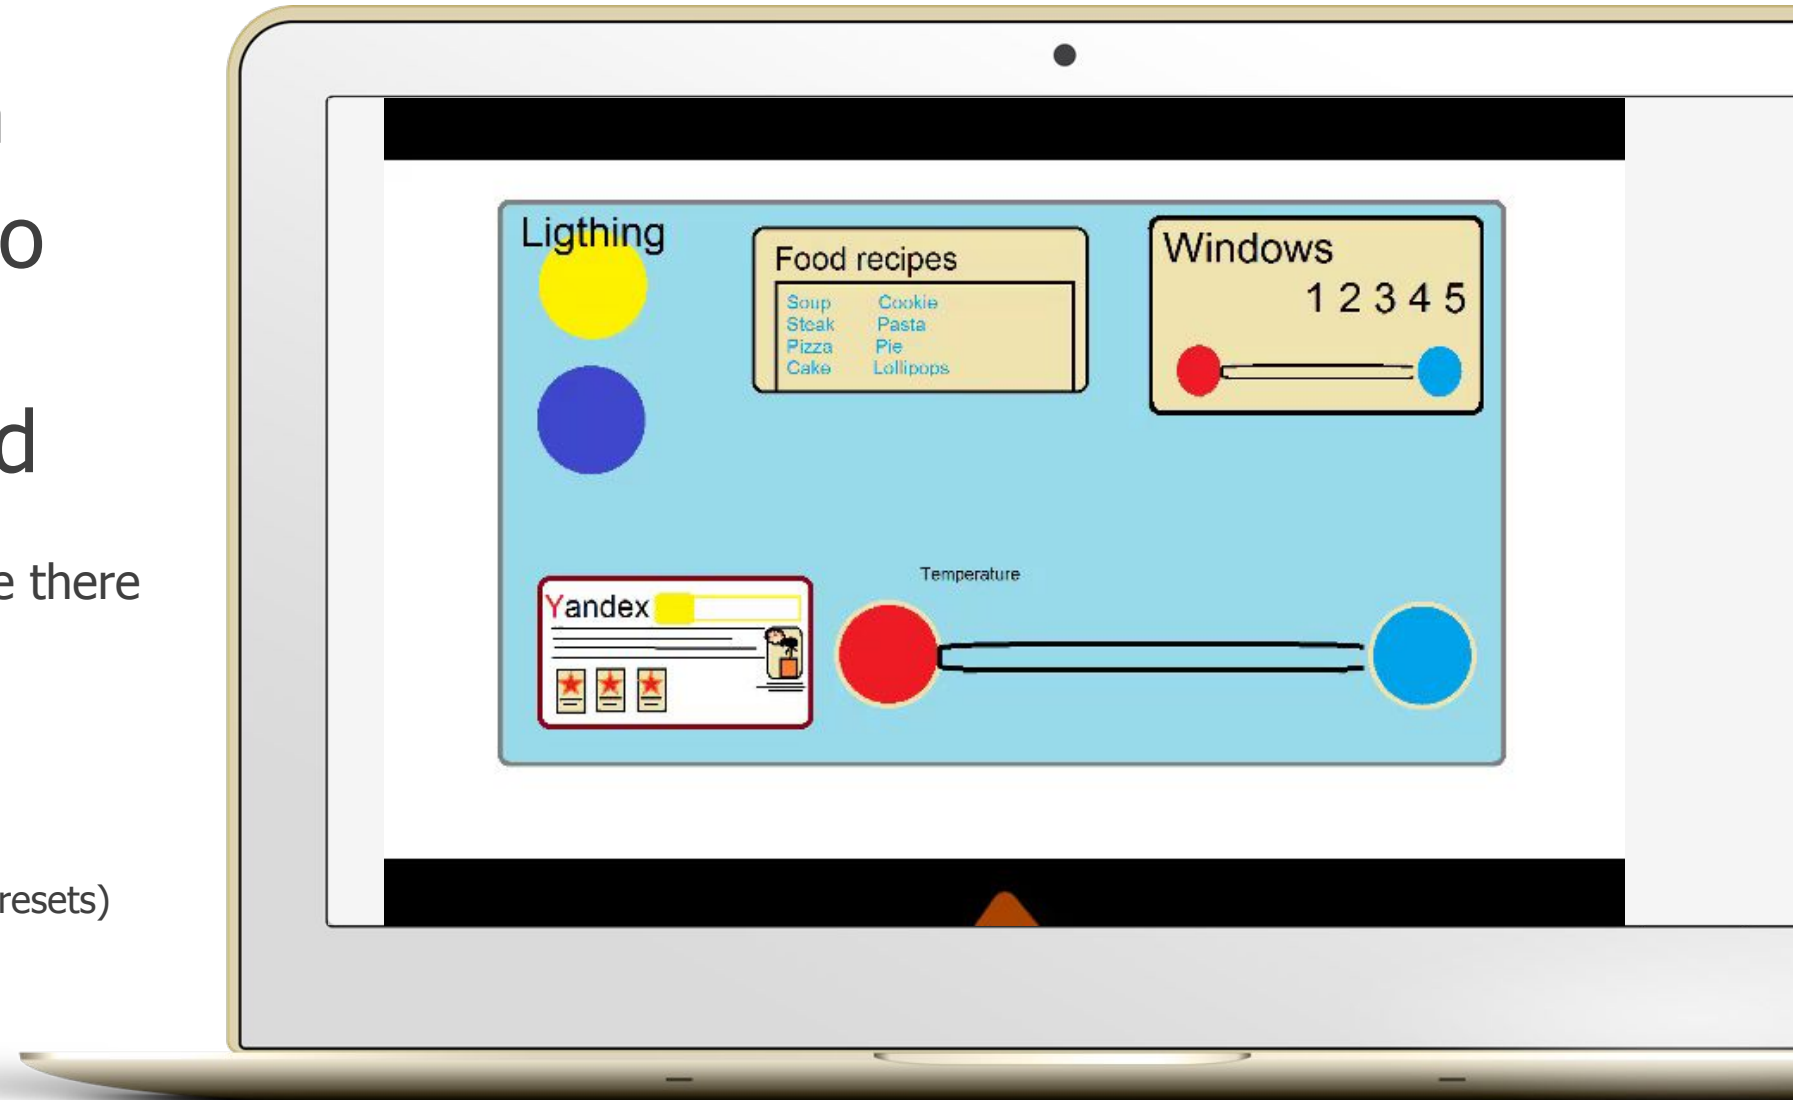

Our bed differs from all other beds in that it has a lot of all sorts of privileges, functions, and the most important thing in it is convenience!

Also we would like to present the prototype of SmartBed App and Programm

It helps the user to control all the systems of the bed

In this video demonstration here there are

- Lighting settings
- 1st browser window opened
- Operating systems support (up to 5 presets)
- 2nd browser window opened
- Temperature controller

SmartBed is key
Key for better sleep
Key for better life

Customise the SmartBed

Include or exclude any of the options, team of developers can take any of your wishes into account

A man with a beard and a backpack is looking at his smartphone on a city street at night. The background is blurred with city lights.

Open a brand new world of good sleeping habits

Sleep well. Dream well.
