

The Earth House

yesterday's Future has become a real
one with great problems

6 components - 6 continents - 6 parts of the Earth House. Such a House exists in our Planetary consciousness! But, being built in reality, it will help convey the idea of everyone's joining for the future

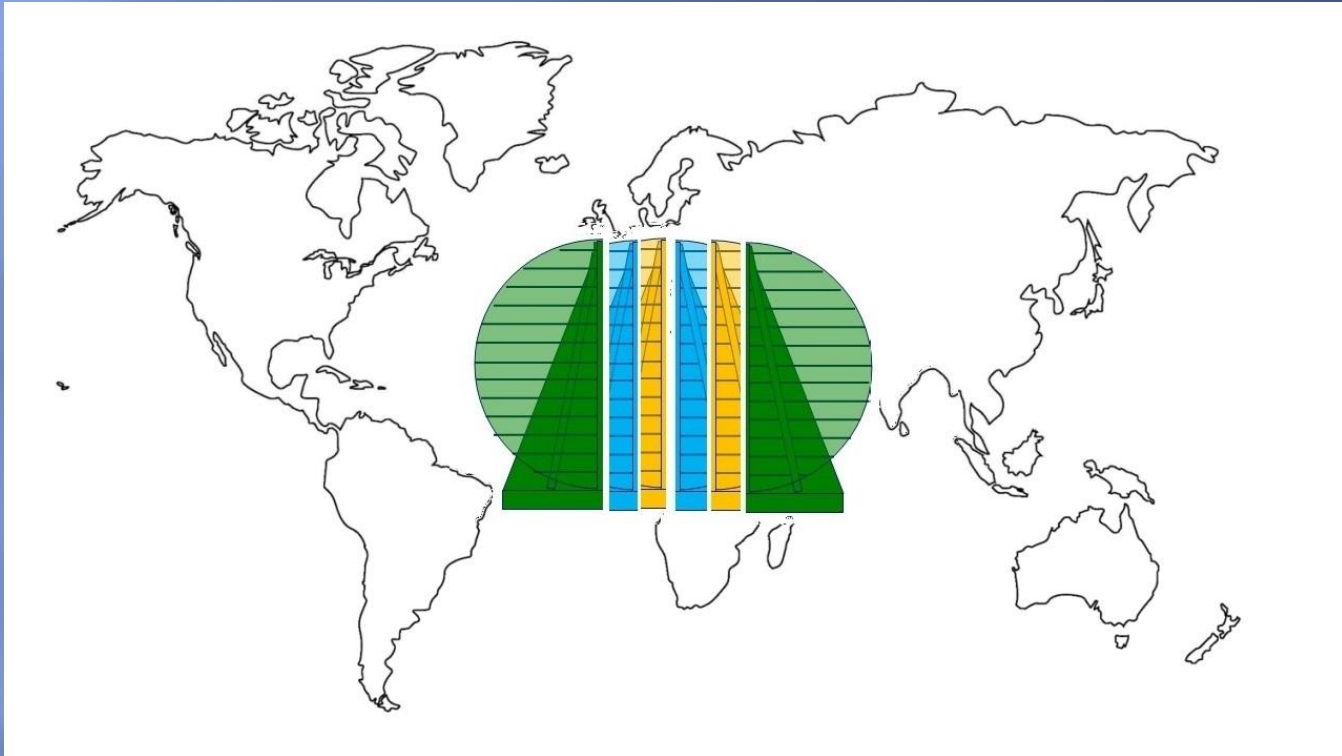

A tall, modern skyscraper with a blue-tinted glass facade, the United Nations Secretariat Building, stands prominently against a blue sky with scattered white clouds. In the foreground, a row of international flags on poles is visible, along with a green hedge. A semi-transparent blue box is overlaid on the lower part of the image, containing white text.

The building for states is built, there is a rostrum for politicians, but it does not solve general human problems.

But, for the tasks facing humanity, it is necessary not just a new building, it is necessary a new planetary Vision, Consciousness, Understanding, Ethics.

We need a new Planetary Architecture. The necessary new Planetary Policy!

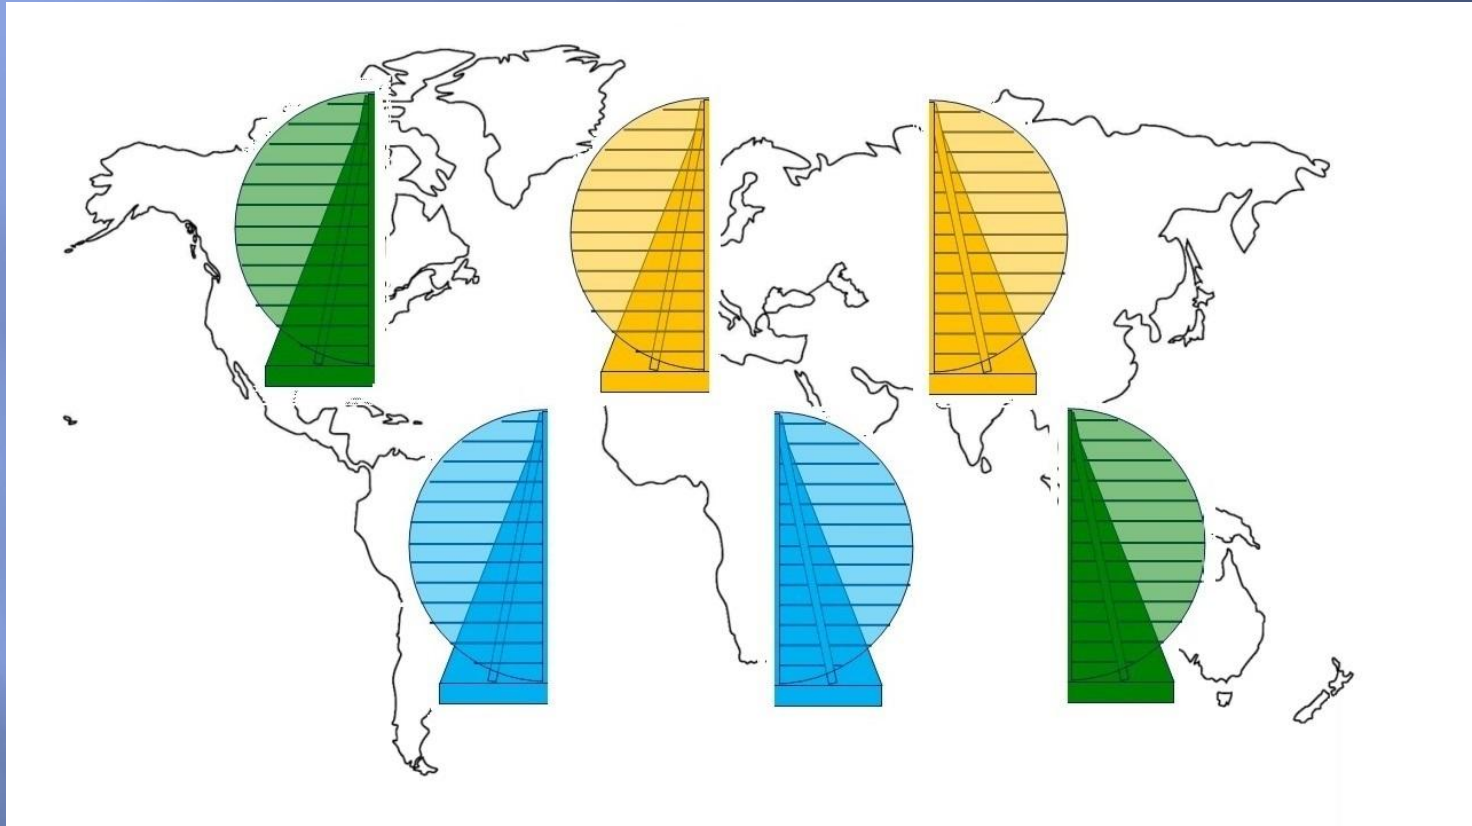

Planetary Architecture will help develop
this Planetary Policy!

The Earth House
is a space for creating a system of
"NEW SMART GLOBAL SELF-GOVERNMENT"
in the interests of sustainable development

The EARTH HOUSE will be built together
and even on the principles of Kraudfanding

The Earth House may become
a new geographical opening for the Earth!

The highest goal of humanity - the preservation of Earth civilization - can be achieved solely through the transformation of the Earthly spontaneous civilization into an Earthly controlled civilization, or the transition from the era of the Earthly spontaneous civilization to the age of the Earthly controlled civilization.

The model of the controlled world with a system of generalized parameters opens unusually wide possibilities for studying and scientific construction of the controlled world, or Earthly controlled civilization..

A high-angle photograph of a severe traffic jam on a multi-lane highway. The road is packed with cars of various colors, including many silver and grey sedans. Numerous people are standing around the vehicles, some with their doors open, suggesting a complete standstill. In the background, a red double-decker bus and other vehicles are visible on an elevated section of the road. The scene is set in a sunny, outdoor environment with some greenery and road signs visible in the distance.

Criterion one. The interaction between all mankind and the entire biosphere of the Earth will be harmonious if the power density of the anthropogenic pressure does not exceed approximately 70 kW/km

The second criterion:

Interactions within the world society will be harmonious if the index of socio-economic disharmony of society does not exceed 10-15.

The internal contradictory world society, in principle, can neither achieve sustainable development, nor come to the noosphere, nor create an Earthly controlled civilization.

Humanity has come to the last point –
a global catastrophe.
Urgent countermeasures of a giant scale are
needed.

In a modern, transcendental world, going to a global catastrophe, globalization is the primary methodological approach, and a policy based on globalism is secondary.

An aerial night view of Earth from space, showing the curvature of the planet and the glowing lights of cities and continents. A semi-transparent dark blue rectangular box is overlaid on the center of the image, containing white text. The text is centered and reads: "We propose to create a global system for monitoring and neutralizing threats to humanity, this will contribute to the growth of people's well-being in different parts of the world and help support the overall strategic balance in the world." The background shows the Earth's surface with various shades of blue, green, and yellow, representing different geographical features and urban areas.

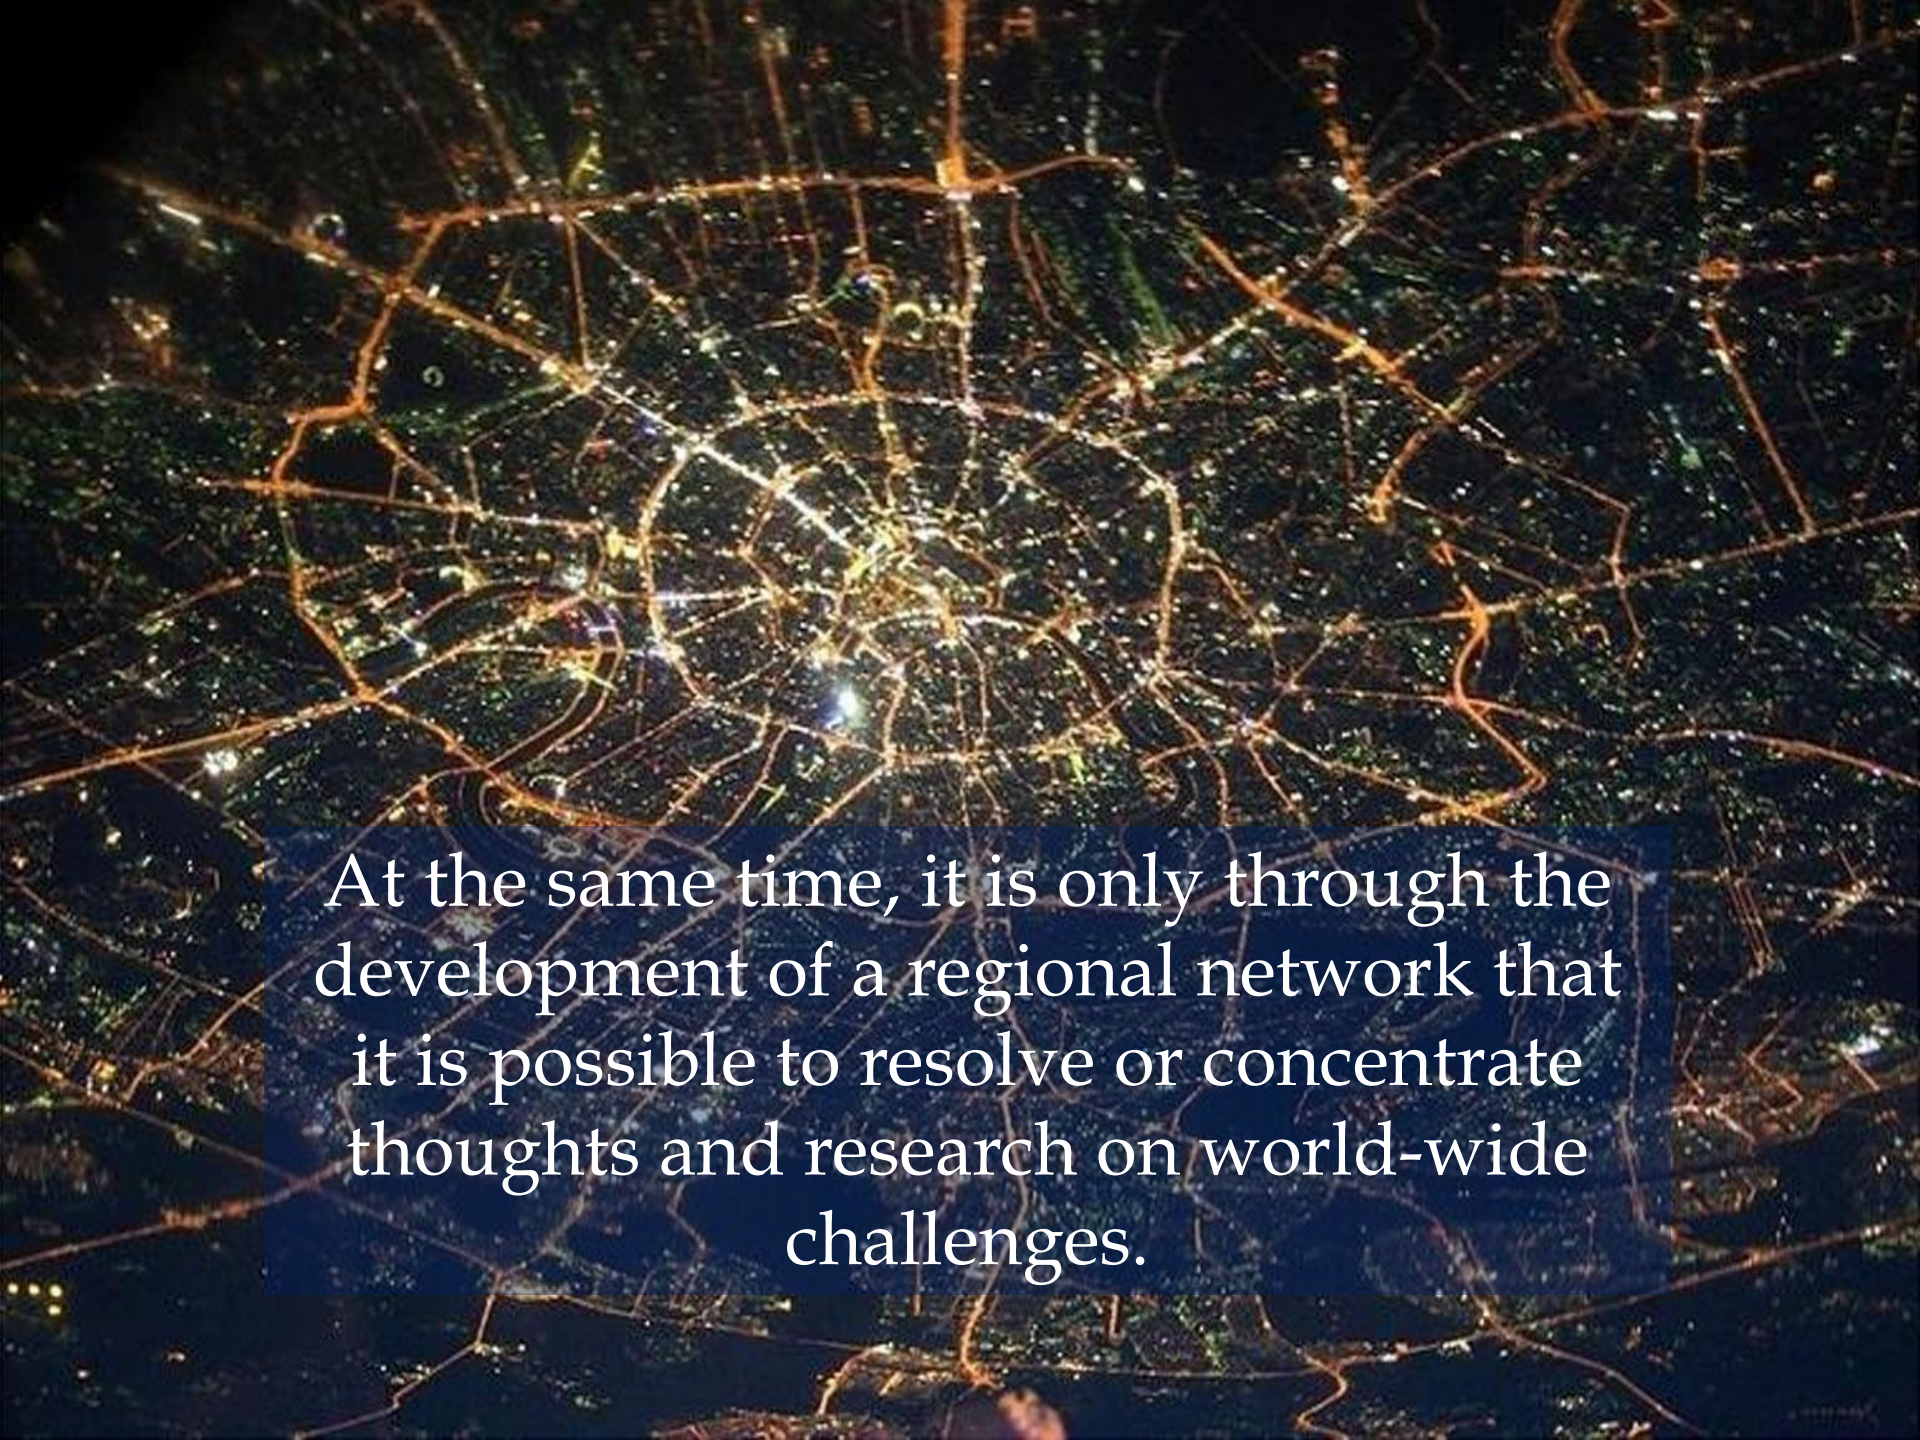

We propose to create a global system for monitoring and neutralizing threats to humanity, this will contribute to the growth of people's well-being in different parts of the world and help support the overall strategic balance in the world.

A satellite view of Earth from space, showing a large, swirling hurricane or cyclone in the center. The satellite's solar panel array is visible on the left side of the frame. The text is overlaid on a semi-transparent dark blue rectangle in the lower half of the image.

To create an all-encompassing platform with the invitation of countries, a scientific community with the goal of developing space potential and monitoring the challenges of the universe.

We are convinced that the UN plays a central role in the direction of the world agenda.

An aerial night photograph of a city, showing a dense network of roads and buildings illuminated by streetlights and city lights. The lights create a complex, interconnected pattern of yellow and orange lines against the dark background of the city and surrounding areas. The overall effect is that of a glowing web or network.

At the same time, it is only through the development of a regional network that it is possible to resolve or concentrate thoughts and research on world-wide challenges.

In addition, we believe that the Regional Center for Cooperation of the House of Earth should not be limited to scientific research and recommendations, the extensive experience of cultural contacts, the dialogue of academic circles and politicians, governments, the exchange of cadres in solving global problems of the present.

A photograph taken from space, likely from the International Space Station, showing a large satellite or space station component in orbit. The component is a cylindrical structure with a white base and a dark upper section, surrounded by a complex network of white metal trusses. Below the component, the Earth's surface is visible, illuminated by city lights at night, creating a glowing pattern of yellow and orange lights against the dark land and oceans. The horizon of the Earth is visible in the distance, and the overall scene is set against the blackness of space.

The human genius must break the
destructive course of world history.
