

Hello the topic of my report is  
organ transplants.

Transplantology is a branch of biology and medicine that studies the problems of transplantation, develops methods for preserving organs and tissues, creating and using artificial organs.

The first successful organ transplant was performed in 1954. The recipient was a 16-year-old boy whose only kidney was removed, his mother became the donor. After 8 weeks, the patient got out of bed, and after 6 months she started working.

# The first successful organ transplants.

- 1954 – first kidney transplant
- 1966 – first pancreas transplant
- 1967 – first liver transplant
- 1967 – first heart transplant
- 1981 – first lung and heart transplant
- 1983 – first lung lobule transplant
- 1986 – first two lung transplant

Organ transplantation has become an everyday phenomenon in modern medicine. A successful transplant prolongs the patient's life.
