

How to Save Endangered Animals?

02

Hunting of rare animals is prohibited all over the world and in our country. They are under special protection in nature reserves and national parks

**In order to save
endangered
animals it is
necessary to:**

- We must fight poachers and create nature reserves
- Visit zoos and aquariums that support conservation efforts
- In order to protect nature and save animals, you need to take care of them and not pollute nature

- Another way to save animals is to create a suitable habitat for our friends

- Use natural remedies

- Find local species that need help

05

It should be noted that if animals, like dinosaurs at the end of the Cretaceous period, become extinct, then this will happen only through the fault of man. The consequences that the complete disappearance of fauna can lead to are truly amazing.

It is also important
to understand that
the climate on
Earth can change
beyond
recognition so that
it will be
impossible to exist
on the planet

07

Let's sum up:

Take care of nature

Love animals

Don't buy fur coats

Thanks for your attention!
