

COVID-19

Performed by Ekaterina Kutsenko

two-week incubation period

similarity of symptoms with the flu

Coronavirus problems

Определение проблемы

-
- global pandemic
 - two-week incubation period
 - sneezing, coughing, runny nose, fatigue

Unusual symptoms

- Multisystem inflammatory syndrome
- Fever, rash, abdominal pain, vomiting, diarrhea
- Quiet hypoxia
- Disorientation in space

To combat coronavirus

- the main task is to develop immunity
- The effectiveness of the BCG vaccine
- deliberate Infection with a virus
- Quarantine
- Accelerated
- proceeding to human testing
- to reduce the burden on the health care system

Disadvantages of quarantine

- quarantine measures
- physical and mental danger
- cardiovascular system, stroke
- mental health
- vulnerable segments of the population

Conclusion

- the panic around the coronavirus is too exaggerated
- The problem is not that the coronavirus is dangerous, but that the health system may not be able to withstand a huge load
- the most vulnerable categories
 - domestic violence
 - mental illnesses
 - refocused attention
