

# What Plants Need to Grow

# What a Plant Needs:

Air  
Light  
Water  
Nutrients  
Warmth

# Why Does it Need Them?

If a seed is not **warm** enough, it will not germinate.

Germination is when the seed starts to sprout in to a plant.

If a plant does not have enough **light**, it will grow to be tall and flimsy as it searches for light. It will probably die.

If a plant is not **watered** enough, its stem will be fragile and have very dry leaves. It will eventually die.

# What Parts of a Plant Do

The **leaves** use a process called **photosynthesis** to produce food for the plant. It uses **light, water and carbon dioxide** to do this.

The **stem** transports water and nutrients to all parts of the plant.

The **roots** take up water and nutrients from the soil.  
It also keeps the plant in the ground.

THE END
