Korean medical equipment is respected

South Korea is one of the most advanced countries in the field of medicine and healthcare. Every year thousands of students from all over the world come to Korea to study medicine. The reason is the high quality of medical education in South Korea.

Why study medicine in Korea?

- Firstly, you will be able to get a fundamental and serious education, which is appreciated all over the world. In most cases, medical education in Korea takes at least 7 years and consists of several stages.
- Secondly, it is easy to gain practical experience and build a professional career in South Korea.

Highly qualified specialists

In South Korea, it is very difficult to become a practicing doctor in Korea. Successful graduation from the university does not guarantee employment. Only a minority of students reach the end of their studies. Full training, including internship and residency, lasts 11 years, but only those who have completed an internship in leading hospitals in the USA, Europe or Canada can count on a position in a good clinic. Only 0.5% of first-year students of the Korean Medical Institute will be admitted to work in their specialty and will make a career in their chosen field.

The best colleges of medicine

The best universities with the college of medicine in South Korea are Seoul National University and Yonsei University.

The College of Medicine of Seoul National University

It is the best university in South Korea for studying medicine. The university includes the College of Medicine. The College has two faculties: the faculty of Basic Medical Science and the faculty of Clinical Science. College education consists of three stages: a preparatory course (2 years), a collegiate program (4 years) and a higher medical school.

서울대학교
SEOUL NATIONAL UNIVERSITY

The College of Medicine of Seoul National University

After 6 years of study, a student can receive specialization in such areas as clinical medicine, surgery, microbiology, immunology, pediatrics, gynecology, plastic surgery, orthopedics, etc.

College graduates get the opportunity to develop their clinical or research medical career both in South Korea itself and in many other countries of the world

The College of Medicine of Yonsei University

This large university is distinguished by numerous educational programs in English. An important feature of the college is its commitment to interdisciplinary education, that is, they teach Eastern and Western medicine.

The College of Medicine of Yonsei University

The College consists of two departments: the scientific department and the clinical department. Students can get specialization in the field of general medicine, laboratory medicine, neurology, ophthalmology, pediatrics, psychiatry, radiology, surgery, etc. The College of Medicine of Yonsei University offers some of the best programs in the country in the field of plastic surgery.

Korean medicine is one of the most advanced today. People are not afraid of doctors and hospitals, so they are ready to pay money for medical care, receiving qualified and professional services. So, if you love eastern culture, ready to compete and you have money, it is better to get a medical education in Korea.

Thank you for attention
